SURVEYOR'S NOTES

1. NORTH AND BEARINGS ARE GRID BASED ON THE NORTH AMERICAN DATUM 1983 AS SHOWN ON THE BASELINE OF SURVEY OF 61ST AVE. PER GPS CONTINUAL OPERATING REFERENCE STATION "PENSACOLA" PER THE STATE OF FLORIDA. BEARING BEING N 03°19'34" E, ALONG THE CENTERLINE OF SOUTH 61ST. AVENUE.

2. NO TITLE SEARCH WAS PERFORMED BY NOR FURNISHED TO MOTT MACDONALD FLORIDA LLC FOR THE PURPOSES OF THIS SURVEY SHOWN HEREON.

3. THE OPINION OF THE LOCATION AND EXTENT OF THE PROPERTY REPRESENTED & RIGHT OF WAYS BY THE SURVEY DOES NOT GUARANTEE TITLE TO NOR DETERMINE OWNERSHIP TO ANY PERSONS OR PARTIES.

4. ALL UNDERGROUND UTILITIES SHOWN WERE LOCATED PER 811 DESIGN TICKETS 323606849, 323606909 & 323606963 AND THEIR PAINTED/FLAGGED LOCATIONS SURVEYED BY MOTT MACDONALD FIELD CREWS. SURVEYOR DOES GUARANTEE UNDERGROUND LOCATIONS. THERE MAY BE OTHER UNDERGROUND UTILITIES NOT SHOWN HEREON. SIZES AND DEPTHS ARE UNKNOWN.

5. ELEVATIONS ARE BASED ON THE NORTH AMERICAN VERTICAL DATUM 1988 AS SHOWN ON THIS SURVEY PER THE PROJECTED ELEVATION FROM GPS CONTINUAL OPERATING REFERENCE STATION "PENSACOLA" PER THE STATE OF FLORIDA.

6. RIGHT OF WAYS AND PARCELS LINES ARE CALCULATED PER FIELD SURVEY OF SUBDIVISION MAPS, RIGHT OF WAY MAPS AND APPARENT MAINTENANCE.

ENCROACHMENTS AND OR IMPROVEMENTS ARE AS SHOWN OR NOTED.
NO INSTRUMENTS OF RECORD REFLECTING EASEMENTS, RIGHT OF WAYS AND OR OWNERSHIP WERE FURNISHED THIS SURVEYOR EXCEPT AS SHOWN.
NO UNDERGROUND INSTALLATIONS OR IMPROVEMENTS HAVE BEEN LOCATED EXCEPT AS SHOWN.
ALL MEASUREMENTS AND/OR ELEVATIONS WERE MADE IN ACCORDANCE TO UNITED STATES STANDARDS AND/OR UNITED STATES COAST AND GEODETIC DATUM. DISTANCES ARE IN FEET, TENTHS AND HUNDREDTHS OF A FOOT.

THERE MAY BE ADDITIONAL RESTRICTIONS NOT SHOWN ON THIS SURVEY THAT MAY BE FOUND IN THE PUBLIC RECORDS OF ESCAMBIA COUNTY.

UNLESS IT BEARS THE SIGNATURE AND THE ORIGINAL RAISED SEAL OF A FLORIDA LICENSED SURVEYOR AND MAPPER THIS DRAWING, SKETCH, PLAT OR MAP IS FOR INFORMATIONAL PURPOSES ONLY AND IS NOT VALID.

BATHYMETRIC SURVEY

hdrinc.com 25 West Cedar Street, Suite 200, Pensacola, FL 32502-5945
(850) 432-6800

HYDROGRAPHIC (BATHYMETRIC) SURVEY

Certified to: Escambia County, Florida Board of County Commissioners

Surveyor's Notes:

1) The purpose of this survey is to depict the general existing bottom elevations for Lake Charlene.
   a. No data was collected under any portion of an existing dock or structure due to safety concerns.
2) The information shown hereon reflects the general bottom conditions as they existed on the field survey date below, and can only be indicative of the general bottom conditions on that date.
   a. Bathymetric Field Survey Date: October 13, 2016.
3) The horizontal positions and tidal reductions were derived from the utilization of a Leica 1200 Feal Time Kinematic (RTK) Global Positioning System (GPS) dual frequency receiver in RTK mode utilizing the Florida Department of Transportation (FDOT) Florida Permanent Reference Network (FPRN) and the National Geodetic Survey (NGS) Geoid 12A model.
4) The subaqueous measurements were made using a 200kHz single beam echo sounder (Unabara's HydroBook).
5) The echo soulfder data was collected and processed using Hypack 2014.
6) The sound velocity was determined using a Unabara HydroBar in cast (profile) mode, and then verified using a bar plate/bar check.
   a. An average sound velocity was used.
7) Measurements were made in accordance with the United States Standard Foot.
8) This is not a boundary survey.
9) This survey does not reflect, determine, or guarantee ownership.
10) Underground utilities were not located, if any.
11) No attempt was made to locate any underground foundations or structures.
12) Additions or deletions to survey map(s) or report(s) by other than the signing party or parties is prohibited without written consent of the signing parties.
13) The bathymetric survey or copies thereof are not valid without the signature and the original raised seal of a Florida licensed Surveyor and Mapper.
14) No other person(s) and/or entity(ies) other than those certified to above may use this bathymetric survey or copies thereof, for any reason whatsoever, without the prior written consent of the undersigned.
15) All elevations are referenced to the North American Datum of 1988 (NAVD88).
16) Bearings and coordinates shown hereon have the following metadata:
   a. Projection Zone: Florida North
   b. Projection Type: Lambert Conformal Conic
   c. Datum: North American Datum of 1983 with a datum tag of 2011 (NAD83 (2011))
17) Spot elevations shown hereon are for graphical purposes only and were determined using the Hypack sub-program SORT.
18) Aerial photography was obtained from the Florida Department of Transportation and dated 2013.
19) The elevation of the water surface relative to the North American Vertical Datum of 1988 (NAVD88) at 1:45 pm on October 13, 2016 was 23.2 feet.
   a. The vertical elevation shown above is based on the following benchmark:
   i. Designation: K 111 and PID: BG1688
      1. North American Vertical Datum of 1988 (NAVD88) Elevation = 37.63 feet (11.471 meters)
20) The official record of this survey is the original signed and sealed paper version. Any electronic version(s) is not valid unless it is identical in all forms and respects to the original signed and sealed paper version. The onus of comparison is placed on the user of the electronic version.

4) The subaqueous measurements were made using a 200kHz single beam echo sounder (Unabara's HydroBook).
5) The echo sounder data was collected and processed using Hypack 2014.
6) The sound velocity was determined using a Unabara HydroBar in cast (profile) mode, and then verified using a bar plate/bar check.
a. An average sound velocity was used.
7) Measurements were made in accordance with the United States Standard Foot.
8) This is not a boundary survey.
9) This survey does not reflect, determine, or guarantee ownership.
10) Underground utilities were not located, if any.
11) No attempt was made to locate any underground foundations or structures.
12) Additions or deletions to survey map(s) or report(s) by other than the signing party or parties is prohibited without written consent of the signing parties.
13) The bathymetric survey or copies thereof are not valid without the signature and the original raised seal of a Florida licensed Surveyor and Mapper.
14) No other person(s) and/or entity(ies) other than those certified to above may use this bathymetric survey or copies thereof, for any reason whatsoever, without the prior written consent of the undersigned.
15) All elevations are referenced to the North American Datum of 1988 (NAVD88).
16) Bearings and coordinates shown hereon have the following metadata:
a. Projection Zone: Florida North
b. Projection Type: Lambert Conformal Conic
c. Datum: North American Datum of 1983 with a datum tag of 2011 (NAD83 (2011))
17) Spot elevations shown hereon are for graphical purposes only and were determined using the Hypack sub-program SORT.
18) Aerial photography was obtained from the Florida Department of Transportation and dated 2013.
19) The elevation of the water surface relative to the North American Vertical Datum of 1988 (NAVD88) at 2:00 pm on December 21, 2016 was 22.6 feet.
a. The vertical elevation shown above is based on the following benchmark:
i. Designation: K 111 and PID: BG1688
1. North American Vertical Datum of 1988 (NAVD88) Elevation = 37.63 feet (11.471 meters)
20) The official record of this survey is the original signed and sealed paper version. Any electronic version(s) is not valid unless it is identical in all forms and respects to the original signed and sealed paper version. The onus of comparison is placed on the user of the electronic version.

TABLE OF CONTENTS

1.0 INTRODUCTION

This report forwards the results of our geotechnical exploration for the proposed **Lake Charlene Drainage Improvements** project in Pensacola, Florida. The purpose of this geotechnical exploration was to determine the general subsurface conditions in the proposed concrete pipe areas and headwall location. This information would be used to provide recommendations for dewatering, earthwork, pipe bedding and backfilling. In addition, we installed piezometers around the Lake Charlene area to help evaluate groundwater levels and groundwater flow direction in the project vicinity. Our exploration included 17 Standard Penetration Test (SPT) borings, the installation of six piezometers, classification of the samples obtained in the field, laboratory testing of selected samples, and analysis by our engineering staff.

2.0 SITE AND PROJECT CONDITIONS

The proposed project will lower the water level of Lake Charlene 18 inches and provide larger outflow pipe(s). The purpose is to help control flooding in the area around Lake Charlene and the other lake connected to it (Lake Bridle). Reportedly, the current pipe outfall is set too high and is using only some the cross sectional area for water flow. Flow into the current pipe is controlled by a sluice gate structure, which we understand holds back 18 inches of water. We understand that a new sheet pile weir is planned to be placed at the invert of existing pipe, and a headwall is planned for the two new pipes.

Two new 60 inch diameter concrete pipes are planned to extend from the Lake Charlene outfall running east along Lake Joanne Drive to South 61st Avenue, then southwards down 61st Avenue to the drainage structure number 5. A single 66 inch diameter concrete pipe is planned to extend southwards along 61st Avenue (parallel to the existing 66 inch pipe) from structure 5 to structure 6, where a new 60 inch diameter concrete pipe (parallel to the existing 60 inch pipe) will extend to an outfall on the south side of US Highway 98. Reportedly, the total length of dual and single piping is roughly 2,558 feet, and the top of pipe is planned to be three feet below existing grades. We understand that cut and cover is the planned installation method for most of the pipe run, and the excavation will likely take out most of the existing roadways. The pipe under Highway 98 may be installed by cut and cover or jack and bore methods. Our client also needs to know the elevation of the groundwater surface around Lake Charlene, as well as approximate groundwater flow direction and rate. If this information changes or is incorrect, the geotechnical engineer should be notified, and changes to our recommendations may be needed.

3.0 SUBSURFACE EXPLORATION

Our exploration in the new concrete drainage pipe run consisted of 11 Standard Penetration Test (SPT) borings (B-1 to B-11) drilled to a depth of 16-31 feet below grade at the time of drilling. Our exploration in the vicinity of Lake Charlene consisted of 6 SPT borings drilled to a depth of 21 feet below existing grade. These borings were drilled in two groups, with B-12 to B-14 being drilled north of Lake Charlene and B-15 to B-17 drilled southwest of Lake Charlene. One inch diameter PVC piezometers were installed to an approximate depth of 20 feet below existing grade at the B-12 to B-17 boring locations in the county right of way. Each piezometer was finished with a flush mounted cast iron manhole along with a small concrete pad.

Due to utility concerns, the top 5-8 feet of the borings were advanced by manually turning a 3-inch diameter, 6-inch long sampler/auger into the soil until it was full. The auger borings were

probed using a steel probe rod to approximate the in place soil density. The procedure was generally repeated until the borehole collapsed due to groundwater. After the hand auger was stopped the SPT sampling began.

The SPT consists of driving a 2-inch diameter split spoon sampler into the ground using a 140-pound hammer dropped 30 inches. The number of blows required to drive the sampler one foot after seating it six inches is referred to as the blow count or "N" value and is considered a measure of the relative density of soils. "N" values can be found in **Figure #2** adjacent to the soil descriptions. The SPT borings were drilled in general accordance with ASTM D1586 using a truck mounted drill rig. The borings were advanced between SPT sampling with the "mud" jetting technique and a Bentonite drilling mud. Each sample was removed from the hand auger or SPT sampler, classified in the field by the driller, and packaged for visual classification by our engineering staff and for laboratory testing. Two Shelby tube or relatively undisturbed samples were taken for permeability testing in our laboratory.

4.0 SUBSURFACE CONDITIONS

Boring locations for the new concrete drainage pipes are shown in the attached **Figure #1A** and the soil boring locations in the vicinity of Lake Charlene are shown on the attached **Figure #1B.** These locations should be considered approximate. The borings were located in the field using a hand held GPS unit, the provided drawings, and Google Earth. Our client's surveyors determined the ground surface elevations at the boring locations and the top of metal casing at the six piezometer locations after drilling. The subsurface conditions encountered in the borings are shown in **Figure #2**, and descriptions of the soils encountered are accompanied by their Unified Classification symbol (SP, SM, etc.) based on a visual examination unless accompanied by laboratory results. Boundaries between soil layers and soil depths should be considered approximate, since the actual transition between soil layers may be gradual. Following is a generalized summary of the subsurface conditions encountered in the test borings. A detailed description of the subsurface conditions encountered in the borings can be found on **Figure #2**. Note that boring B-11 and associated recommendations will be forwarded under separate cover.

Boring B-1 at the northern concrete headwall generally encountered 24 inches of topsoil at the ground surface, underlain by dark brown to dark brown/gray loose to medium dense silty sand with roots to the 7 foot depth, over brown stained medium dense to dense sand to the 19 foot depth. Below the 19 foot depth, layers of dark brown, brown and gray stained dense, medium dense and loose silty sand and sand were encountered to the bottom of the boring at the 31 foot depth.

Borings B-2 to B-6 generally encountered 5-24 inches of topsoil at the ground surface, underlain by brown, gray, white and orange medium dense, loose and very loose slightly silty sand with occasional layers of sand and silty sand to depths of 2-4.5 feet, underlain by dark brown very loose, loose and medium dense stained slightly silty sand to sand to a depth of 7 feet. Boring B-4 encountered dark brown to black loose to medium dense silty sand with heavy organic stain at the 4-7 foot depth. Below the 7 foot depth, these borings encountered dark brown to brown dense and medium dense stained slightly silty sand and sand to the bottom of the borings to the 16 foot depth.

Borings B-7 to B-10 was similar to the B-2 to B-6, except that the soils from roughly 4-7 to 9.5-14 feet were loose to very loose in density. Note that seams of dark brown organic clayey silt

and/or silty sand with wood, roots and organic material were encountered in borings B-7, B-9 and B-10 between the 9-14, 7-9 and 7.5-8 foot depths respectively.

Borings B-12 to B-17 generally encountered 12-24 inches of topsoil at the ground surface, underlain by tan, brown, dark brown, gray, orange and white slightly silty sand with layers of sand or silty sand to the bottom of the borings at the 21 foot depth. Organic stain was common in the brown to dark brown soils. Lighter colored sand layers were more common at or near the bottom of borings B-12 to B-14. Soil density was generally loose and very loose with scattered medium dense layers in the upper 7-14 foot, over medium dense or medium dense to dense soils with scattered loose areas to the bottom of the borings.

4.1 Groundwater Data

Groundwater was encountered at the boring locations at the elevations noted on **Table #1** below. Water levels taken in the boreholes at the time of drilling should be considered approximate. Water levels were taken at the time of drilling at all boring locations, and twice after boring operations were complete in the six piezometers (B-12 to B-17). Groundwater levels will vary with the water levels in the nearby lakes, the amount of local rainfall, and changes in site drainage characteristics and may be different at other times. Ground surface elevations at our boring locations and top of casing elevations were provided by our client. The elevation data for B-8 was estimated from the two adjacent borings, as no survey data was provided.

Table #1: Groundwater Elevation Data

Boring/Piezometer	Ground Surface/Top Of Casing Elevation (ft)	Groundwater Elevation Time of Drilling (ft) 11.30.16 to 12.7.16	Groundwater Elevation (ft) 12.27.16	Groundwater Elevation (ft) 1.6.17
B-1	29.4	24.4	-	-
B-2	30.5	23.5	-	-
B-3	28.4	23.4	-	-

5.0 LABORATORY TEST RESULTS

Laboratory testing for this project included two falling head permeability tests and grainsize analysis tests run on portions of the Shelby tube samples. Laboratory testing also included basic properties tests run on the split spoon samples including wash #200 sieve, grainsize and natural moisture content tests to document basic properties and assist in soil classification. The results of the moisture content tests, wash #200 sieve, and the wash #200 sieve portion of the grainsize tests are shown on the boring logs (**Figure #2**) adjacent to the samples tested. The results of the permeability tests are summarized in the following **Table #2**. Grainsize analysis tests were run on portions of the two Shelby tube samples and one split spoon sample, and the grainsize curves are attached as **Figure #3**. The sample marked in the table below with an asterisk appeared to be disturbed in the tube, and this sample was remolded in a Standard Proctor mold to a density similar to that of the in place soils based on the SPT data.

Table #2: Falling Head Permeability Test Results

Boring	Sample Depth (ft)	Sample Description	Dry Unit Weight (pcf)	Saturated Vertical Hydraulic Conductivity (K_{vs}) (ft/day)	Percent Fines
B-12	8.5-9.5	Light orange sand w/orange silty sand	99.4	3.0	3.3
B-17	8-9	Dark brown sand	103.2	29.4*	1.5

*Remolded Test Results

6.0 DISCUSSION AND RECOMMENDATIONS

6.1 Basis of Recommendations

Recommendations rendered herein are based on assumed and/or design information available at the time of this report, the subsurface conditions encountered in the test borings, commonly accepted Geotechnical Engineering principles and practices, and our experience with similar soil/groundwater conditions. Should the final project design information differ from the design information used in this report or should any soil conditions not discussed in this report be encountered during construction, our office should be notified and retained so that this report can be modified as needed.

Regardless of the care exercised in performing a Geotechnical Exploration, the possibility always exists that soil and/or groundwater conditions between the test borings will differ from those encountered at the specific boring locations. In addition, construction operations may alter the soil conditions. Therefore, it is recommended that a representative from Larry M. Jacobs & Associates, Inc. (LMJ) remain involved throughout construction to provide construction testing and quality assurance services and additional recommendations if needed due to unforeseen conditions.

6.2 Summary and General Comments

Soil conditions were good at the B-1 boring location for support of the headwall foundation and sheet piling at the north end of the project. In addition, the subsurface conditions encountered in the borings appear to be suitable for bedding the drainage pipes with some probable undercutting of poor soils on the southern half of the pipe run. Shallow groundwater is

anticipated to impact construction, and dewatering will be required to install the pipes and headwall foundation. Groundwater was between 5-8 feet below existing grade at the time of drilling which was during a dry period, and the bottoms of the pipes are reported to be 8-8.5 feet below existing grade. Groundwater levels were significantly higher when the water levels were rechecked in the piezometers on 1.6.17 after heavy rainfalls. The 1.6.17 readings in the piezometers indicate a 2.5-4.1 foot rise in water levels above the time of drilling. Consideration should be given to starting dewatering as far in advance of the work as possible and doing the work in a typically dry weather period, as this would help with the moisture sensitive soil problems noted below.

Compaction of the bottom of the pipe excavation will be needed in loose to very loose soil areas to provide proper pipe support. Loose to very loose soils were encountered at the bottom of the proposed excavation in borings B-7 to B-10. The other borings (B-1 to B-6) indicated medium dense to dense soils at that depth, and these medium dense to dense conditions are expected to be suitable to bed the pipes on firm undisturbed soils or with compaction if loose soils are encountered. Note that borings B-7, B-9 and B-10 encountered soils with organics, wood or soft organic clayey silt at or near the bottom of pipe depth. Soils with significant organic content, wood, or soft clayey silt are typically unsuitable to bed pipes. LMJ technicians should evaluate all questionable areas during construction, and undercutting and replacement with clean, coarse sand (less than 3% fines) or crushed stone may be needed. Based on the logs of boring at these three locations, undercutting depths would appear to be in the 1-2 foot range to remove the problem soils. We recommend the contract have a unit price and budget for removal and replacement of unsuitable soils.

The borings also encountered silty sand, slightly silty sand and sand soils with organic stain in the upper 8 feet and at deeper depths. These type soils, particularly the silty sand and slightly silty sand with more fines (SM/SP), are moisture sensitive and can be more difficult or impractical to compact in wet conditions. Wet silty sand soils will be slow to dry, will not dry in a stockpile and would need to be worked and spread out in dry weather to achieve moisture contents near optimum. Adequate space would be needed to dry these soils out, and it may not be practical to reuse the worse part of the native soils (heavily stained silty sand) due to space, time and weather constraints. The following sections provide our recommendations for site preparation and excavation, pipe bedding, backfilling, quality control testing, foundation design recommendations and our comments on groundwater flow around Lake Charlene.

6.3 Site Preparation and Excavation Recommendations

Site preparation should begin stripping topsoil and existing pavement systems and then dewatering as needed. Note topsoil was thick at some boring locations, and it should be stockpiled for reuse as needed in the landscaping areas. Existing pavement base types and thickness are unknown, and you may want to consider stockpiling the base material separately for reuse as top of subgrade material beneath the new road. We recommend that the contractor evaluate the groundwater levels at the time of construction, and we recommend lowering the groundwater table to a minimum depth of 2-3 feet below the bottom of the excavation. Well points are most suitable for dewatering in the native sand and slightly silty sand soils. Some difficulty dewatering may be experienced in the lower permeability silty sand soil layers, and the well points may need to be sanded in at those locations to improve performance. The water produced by the well points is likely to be brown in color, due to the organic stain in most of the

sands on site. Well points should be installed as far ahead of the construction as practical to facilitate lower moisture content in the native soils to be used as backfill.

A trench box is typically used for utility trenches and would be acceptable for this purpose. If no trench box is used (in areas with utilities), excavations should be made at a safe slope (1.5H:1V minimum) or the contractor will need to maintain shoring and/or bracing as applicable. Note that significant rainfall events and flowing water (seepage forces) through the sides of excavations can destabilize open cuts, and surface water runoff, erosion, and groundwater seepage should be controlled for all excavations. The contractor is solely responsible for designing and constructing safe excavations as required to maintain stability during construction. All excavations should be constructed in accordance with the latest local, state, and federal safety regulations.

6.4 Pipe Bedding Recommendations

All pipes and any manholes should be placed on firm undisturbed soils or well compacted soils. We recommend that a representative from our office evaluate the soils at the bottom of the trenches and at manholes by probing with a steel rod, and any loose areas encountered should be compacted to a minimum of 95% of the Modified Proctor Test (ASTM D1557) density for a minimum depth of 12 inches. Compaction of loose areas should be verified using in place nuclear density testing. As noted in **Section 6.2**, undercutting of soils with significant organic content or soft clayey silt should be expected at locations near B-7, B-9 and B-10, and potentially at other areas on the pipe run if these unsuitable soils are more widespread than indicated by the borings or where the loose native soils are too wet to compact if needed.

6.5 Backfill Recommendations

Excavated native soils, free of significant organic content, wood, debris or other deleterious materials can be used to backfill trenches or other excavations. Imported fill should be sand (SP) or slightly silty sand (SP/SM) with less than 9 percent fines, and sand soils with less than 3 percent fines or crushed stone would be advisable at the bottom of the excavation if wet conditions are present. Backfill materials under the roadway or structures should be placed at or near their optimum moisture content in lifts compacted to a minimum of 95% of the soil's maximum density as determined by the Modified Proctor Test (ASTM D1557). Backfill for trenches or excavations more than 5 feet outside of roadways or structures can be compacted to a minimum of 90% of the soil’s Modified Proctor Test (ASTM D1557) density. The sand and slightly silty sand soils encountered in the borings should be readily compactable in 12-inch lifts using traffic sized equipment or 6-8 inch lifts using hand equipment. The borings encountered moisture sensitive stained silty sand (SM) and stained slightly silty sand soils (SM/SP) and these soils are hard to work when wet. Moisture sensitive soils, particularly the silty sand, are more difficult to dry out and compact and may need to be placed in thinner lifts to achieve compaction. Wet soils may need to be spread out to dry. Native soils that cannot be practically dried out in the available time frame or space will need to be replaced with dried native soils or imported fill soils at or near its optimum moisture content.

6.6 Earthwork Quality Control Testing

We recommend running in place nuclear density tests to verify compaction on every 12-inch increment of trench backfill and compacted trench bottom at a maximum of 75-foot intervals along the trench alignment. Field monitoring and quality assurance testing are an extension of

the geotechnical design, and we recommend that LMJ be allowed to continue our involvement in the project through these phases of construction. All testing should be performed by a qualified engineering technician working under the direct supervision of a registered professional geotechnical engineer.

6.7 Pavement Repair Recommendations

6.7.1 Subgrade Recommendations

The native sand and slightly silty sand soils have moderate strength, with an estimated LBR of roughly 15-30 based on our experience. The top 12 inches of backfill beneath the pavement and shoulder areas should have a minimum LBR of 30. The contractor may need to stabilize lower strength soils by mixing the subgrade with graded aggregate base, reusable old base materials or imported suitable soils with an LBR of 30. We recommend compacting the top 12 inches of the subgrade to a minimum of 98% of the Modified Proctor Test (ASTM D1557) density.

6.7.2 Base Recommendations

Given the potential for shallow water conditions, we recommend providing a graded aggregate base for this project because it is the least effected by shallow groundwater. We recommend providing a minimum of 8 inches of base material for this project, unless a pavement design based on expected traffic loads is done. Graded aggregate base should have a minimum LBR value of 100. The base should be compacted to a minimum of 100% of the Modified Proctor Test (ASTM D1557) density.

6.7.3 Asphalt Recommendations

We recommend paving with at least 2 inches of asphalt for medium duty areas (depending upon traffic loads and other factors). All asphalt should consist of FDOT structural course Superpave Asphaltic Concrete (SP-9.5, SP-12.5, or SP-19.0) meeting the requirements of the FDOT Standard Specifications for Road and Bridge Construction Section 334. Superpave asphalt fine mixes should be compacted to a minimum density of 93% of the laboratory maximum specific gravity (G_{mm} or Rice Specific Gravity) as determined by FM 1-T 209. Superpave asphalt coarse mixes should be compacted to a minimum density of 94.5% of the laboratory maximum specific gravity as determined by FM 1-T 209.

6.7.4 Pavement Quality Control Testing

A sample of the proposed pavement base material should be submitted to our laboratory for LBR and grainsize testing to verify that it meets the project requirements prior to purchase. Proper compaction of the pavement subgrade and base is critical to the performance of the pavement. We recommend running in place density tests to verify compaction of the base and subgrade at a frequency of one test per 5,000 square feet of roadway. The temperature of asphalt at the time of placement is critical to achieving proper compaction, and we recommend documenting and verifying the asphalt temperature at the time of placement. After placement and compaction, the asphalt should be cored to determine the thickness that was placed and the compaction of the asphalt. The bulk specific gravity (G_{mb}) of the cores should be determined in accordance with FM 1-T 166.

6.8 Headwall Foundation and Sheet Piling Recommendations

The soil borings encountered dense sands at a depth of 10 feet below grade at the B-1 boring location and groundwater at 5 feet below existing grade at the time of drilling which was during a dry period. Dewatering will be needed to install a foundation roughly 10 feet below grade at this location. The boring data indicates the footing may be placed on firm undisturbed sand soils, and our te chnician should probe the bottom of the footing excavation prior to the placement of rebar. Any loose areas should be compacted to a depth of at least 12 inches to a minimum of 95% of the soil's maximum density as determined by the Modified Proctor Test (ASTM D1557) with a large mechanical plate tamper with a minimum dead weight of 300 pounds. We recommend that a representative from our staff run field density tests to verify compaction of the bottom of the footing excavation.

If the site is prepared in accordance with the preceding recommendations, and a representative from our company is able to verify these recommendations, footings for the proposed headwall may be designed for an allowable net soil bearing pressure of **2,500 pounds per square foot (psf)**. Settlements from the soils beneath the footings at this pressure are expected to be less than one inch, most of which should occur during construction and after the first loading. Sheet piling may be designed with the soil properties noted on the logs of boring for the B-1 boring. The angle of internal friction for sandy soils is provided, as well as moist/buoyant unit weights above the water table and buoyant unit weights below the water table.

6.9 Groundwater Flow Around Lake Charlene Discussion

Based on water levels taken on 1.6.17, the groundwater flow direction in the vicinity of borings B-12 to B-14 is south towards Lake Charlene and groundwater flow direction in the vicinity of borings B-15 to B-17 is north northeast towards Lake Charlene and Lake Bridle. Given an average of the permeability test results, a horizontal permeability rate of twice the vertical, and gradients taken from the piezometer readings, LMJ has estimated the groundwater flow velocity in these areas to be 0.3 to 0.4 feet per day. This value may vary in the field, as soil conditions can change and our permeability data is limited. This data indicates that Lakes Charlene and Bridle are acting as drains for the area, lowering groundwater levels in the vicinity. Lowering the lake level will increase this effect, reducing nearby shallow water events to help limit the negative effects on roadways and housing due to heavy rainfall and providing more in ground stormwater storage.

We hope that this report provides sufficient information for your current requirements. If you have any questions or comments, please do not hesitate to call.

Respectfully yours,

LARRY M. JACOBS & ASSOCIATES, INC.

SUBJECT: Addendum to Report of Geotechnical Exploration
Lake Charlene Drainage Improvements
Escambia County, Florida
LMJ File #: 16-251

Dear Mr. Vinson:

This letter is an addendum to our geotechnical report dated January 13, 2017 and forwards the log of boring for B-11 and associated additional recommendations. The boring location plan is attached as **Figure #1** and the log of boring is attached as **Figure #2**. Boring B-11 was drilled south of the intersection of US Highway 98 and 61st Avenue, and we understand that the project at this location consists of the installation of a new 60-inch diameter concrete pipe running parallel to an existing 60-inch diameter concrete pipe extending south across US Highway 98. We understand that the new pipe is planned to tie into the existing outfall structure, and the bottom of the pipe is planned roughly 8 feet below existing grades. Reportedly, cut and cover or jack and bore methods may be used to lay the new pipe across US Highway 98.

Boring B-11 generally encountered dark brown to brown loose to very loose slightly silty sand to 9.5 feet, over dark brown to black very loose peat with roots and trace wood to 14.5 feet, underlain by brown medium dense sand to 24.5 feet. The SPT blow count in the peat is likely affected by the presence of roots and wood in an otherwise very loose peat matrix. Below 24.5 feet, B-11 encountered gray very loose clayey sand and silty sand to the bottom of the boring at 31 feet.

Based on the planned bottom of pipe depth of roughly 8 feet below grade, the peat encountered in B-11 is a concern for pipe installation. Peat is an organic soil which can be very erratic in lateral extent, thickness and material properties. Peat soils are compressible, low to very low strength, and unsuitable for backfill. Compressible soils can cause settlement of overlying surfaces when subjected to new loads, and laboratory testing on the peat indicates high compressibility.

The increase in stress on the compressible peat from dewatering is a settlement concern for the excavation and surrounding area, potentially including the existing pipe and headwall. B-11 encountered a thin layer of very loose sand underlain by low strength peat at the planned pipe embedment depth and these conditions are unsuitable for bedding the pipe. In addition, there is the potential for the peat soils at the bottom of the excavation to heave upwards into the trench once the soils have been excavated. We recommend that the peat layer be completely removed from beneath the pipe if cut and cover methods are used and an LMJ technician should be onsite to direct and document the removal of the peat. Backfill should be placed and compacted in accordance with our report for this project.

The low to very low strength peat is a concern for jack and bore methods, and stability of the borehole may be concern. Undercutting the peat at and around the southern installation pit will be needed, and associated dewatering may cause a settlement concern for the ground surface around the pit and surrounding headwalls and pipes. Tunneling methods using drilling mud may not be suitable as peat soils can yield to drilling mud under pressure and cause significant loss of drilling fluid.

We hope that this letter provides sufficient information for your current requirements. If you have any questions or comments, please do not hesitate to call.

Sincerely,

LARRY M. JACOBS & ASSOCIATES, INC.

1. Executive summary

1.0 Introduction

HDR contracted Mott Macdonald to prepare/modify existing hydrologic/hydraulic models to evaluate proposed improvements to alleviate flooding in Lake Charlene. Advanced Interconnected Channel and Pond Routing (ADICPR) Version 3.2 developed and marketed by Streamline Technologies, Inc. was used to analyze the performance of the proposed stormwater improvements, and asses the effects of the proposed improvements upon peak stages experienced upstream within the Lake Charlene system, as well as those experienced downstream within Jones Swamp.

1.1 Flooding Area Synopsis: Lake Charlene

The warning stages surrounding Lake Charlene range from 25’ to 27’, with the higher warning stages occurring along the more southerly nodes and decreasing in elevation as the nodes progress further north through the lake system. The normal water surface elevation of the lake system is controlled by the sluice gate at the outfall pipe located at Lake Joanne Drive. This sluice gate maintains a normal water surface elevation of approximately 23’. This elevation leaves available storage capacity within the lake system of only 2’ (25’-23’=2’) before warning stages at the northerly end of the pond are exceeded. This condition is further exacerbated by the fact that flow through the lake system occurs from north to south. Hence, stages at the north end of the system must be higher than those at the south end of the system in order for flow to occur, further reducing the available storage within the system prior to exceeding warning stages at the north end. The cause of flooding along the Lake Charlene system is a lack of sufficient storage capacity above the normal water surface of the lake and below the minimum warning stage elevation. As such, the control structure at Lake Joanne Drive consisting of the sluice gate and 66” RCP pipe is unable to discharge flows from the Lake as quickly as flows into the Lake are added. As long as this condition persists during a storm event, the water surface elevation within the lake system continues to rise and ultimately exceeds the warning stage elevation resulting in flooding conditions.

1.2 Stormwater Modeling:

Existing Lake Charlene Discharge Piping / Channel Model

ICPR models were updated with current channel and pipe invert elevations, sizes, and lengths to reflect the existing conditions of the Lake Charlene outfall piping and channel conveyance system from Lake Joanne Drive to the outfall located South of US Hwy. 98. These modifications were based on recent survey data obtained by Mott MacDonald in December 2016. Survey data was provided in NAVD 88, however ICPR model data is in terms of NGVD 29 (a translation of + 0.22 ft.).

Updates to Existing Conditions within Warrington Basin

Recent improvements within the Warrington Basin were added to the model to better reflect current conditions and drainage patters influencing the proposed project:

65th and La Rua

Drainage improvements to collect runoff from 65th Ave. and La Rua Street have altered the existing drainage pattern by conveying flows to NB360. Previously, runoff from this area was divided among basins BB520, BB530, and BB540. In the new configuration, these basin areas have decreased as reflected in the model, and a new basin, BB529, has been created and assigned to NB360 to represent the new drainage area contributing to this node.

CA080

Pipe PA080 and weir WA080 were removed from the model and replaced with channel CA080, which has a 153-foot-long irregular cross section. This represents the removal of the road that was previously there crossing East Jones Creek (north of Patton Dr./ South of Hwy. 98) which contained a piped connection from NA080 to NA070.

Glen Key

The Glen Key pond (NA260) stage/storage and drop structure data was updated based on survey information provided by HDR. A drop structure was added to account for the 36” pipe connection to NA030, East Jones Creek. The

weir link was also updated to be an irregular cross section, which also conveys water to NA030.

East Jones Creek Restoration

The East Jones Creek portion of the model was updated to reflect the recent restoration project, based on plans and survey information provided by HDR. Three culvert connections were added to convey water from NA050 to NA040, at the location where Navy Blvd. Crosses East Jones Creek. Additional nodes (NA025, NA026, NA028) and channel links were added to reflect the improvements to the creek, which included re-grading and the addition of a bypass channel within the creek.

Lexington Terrace

New nodes (NA006 and NA003) and drop structures were added to the model to represent a new stormwater collection and treatment system at Lexington Terrace, based on plans from Fabre Engineering. The plans included two interconnected stormwater management ponds which discharge to East Jones Creek.

1.3 Proposed Improvements at Lake Charlene

HDR provided Mott MacDonald with a proposed drainage improvement plan set which included placement of double 60” RCP pipes from approx. STA 27+40 (adjacent to Lake Joanne Dr.) to STA 39+20, where the system transitions to a singe 60” RCP pipe to the outfall at STA 30+40. The existing Lake Charlene pipe and channel conveyance system runs adjacent to the East and West of the proposed piping, and ties into the proposed drainage system at three locations: STA 43+85, STA 39+20, and STA 33+65.

The proposed improvements plan was added to the ICPR model with the invert elevation for the pipe run extending from the headwall at Lake Joanne Dr. (approx. STA 27+40) set at an elevation of 20.00 NAVD 88. Initially, it was thought that the system would convey water via pressure flow. However, after reviewing results from the 50 year-24 hour storm event, it was determined that the system was functioning through gravity flow. This was found by comparing the peak stages in the nodes of the proposed system to the elevation of the crown of the pipes entering and exiting each node, which did not appear to be submerged.

Multiple scenarios were analyzed in which the starting water surface elevation was adjusted from el. 21.60 ft. NAVD88 (the invert elevation of the existing discharge pipe) up to el. 23.1 ft. NAVD88, with varying weir lengths. It was ultimately decided That a 53 foot long weir at an elevation of 22.35 ft. NAVD88, would provide acceptable flood relief, while minimizing stage increases downstream, and maintaining a desired normal water level within Lake Charlene. The final results show a stage reduction of 2.72 ft. at Lake Charlene during the 50-year, 24-hour event, and a stage increase of 0.108 ft. downstream at Jones Creek (NA130). This is only a slight rise in comparison to the Grant Model (which has been updated since the initial submittal to include improvements within Warrington Basin), Which provided a maximum stage of 0.02 ft. (0.24 in.) less than the current proposed conditions model.

The results for the existing Conditions, Proposed Improvements, and Grant model are tabulated below for Lake Charlene and downstream at the discharge to Jones Creek.

Existing Conditions			
Node Name	Storm Event	Max Stage (ft.)	Warning Stage (ft.)
NB140	10 year-24 hour	26.785	25
NB140	50 year-24 hour	27.484	25
NB140	100 year-24 hour	27.659	25

Due to the nature of the project, there are some increases in peak stage downstream of the systems connection at Jones Creek, from NA130 to Bayou Chico. These increases are shown in the table below. A complete report of the ICPR results is attached hereto.

Peak Stage Increases Downstream of Discharge				
Node Name	Storm Event	Existing Max Stage (ft.)	Proposed Max Stage (ft.)	Stage Increase Above Existing Conditions (ft.)

1 Calculation Scope

1. Headwall, Weir and Sheet Pile Design at Lake Joanne Drive

2. Headwall Design at S. 61st Street and US Hwy 98

3. Mast Arm Design at S. 61st Street and US Hwy 98

3 Criteria, Codes, and Standards

Florida Department of Transportation Standard Specification for Roads and Bridge Construction, January 2018

FDOT Structures Manual Dated January 2017

American Association of State Highway and Transportation Officials (AASHTO) Load and Resistance Factor (LRFD), Bridge Design Specifications, (7th), Edition and all subsequent interims

3 Lake Joanne Drive (North Headwall)

North Headwall Design

PROGRAM CWALSHT-DESIGN/ANALYSIS OF ANCHORED OR CANTILEVER SHEET PILE WALLS
BY CLASSICAL METHODS
DATE: 9-AUGUST-2017 TIME: 10:44:18

****
* SUMMARY OF RESULTS FOR *
* CANTILEVER WALL DESIGN *
****

I.--HEADING
'LAKE CHARLENE
'CANTILEVERED FRP SHEET PILE WINGWALL
'25 psf Surcharge, EL 26.5

II.--SUMMARY

RIGHTSIDE SOIL PRESSURES DETERMINED BY FIXED SURFACE WEDGE METHOD.

LEFTSIDE SOIL PRESSURES DETERMINED BY COULOMB COEFFICIENTS
AND THEORY OF ELASTICITY EQUATIONS FOR SURCHARGE LOADS.

WALL BOTTOM ELEV. (FT) : 8.88
PENETRATION (FT) : 9.12 — USE PENETRATION = (1.2)(9.12) = 10.94'

MAX. BEND. MOMENT (LB-FT) : 6.8927E+03
AT ELEVATION (FT) : 13.26

FOR 3" MAX Δ:

MAX. SCALED DEFL. (LB-IN^3): 1.0520E+09
AT ELEVATION (FT) : 26.50

EI REQ'D = 1.0520E9/3 = 350.7 E6 LB·IN²

NOTE: DIVIDE SCALED DEFLECTION MODULUS OF
ELASTICITY IN PSI TIMES PILE MOMENT
OF INERTIA IN IN^4 TO OBTAIN DEFLECTION
IN INCHES.

FDOT Mast Arm Analysis Program

Custom File Name (optional) Lake Charlene Mast Ar

The new custom file will be a copy of the last file called from the program. A '.dat' extension will be added to the file name.

Add file to file list Refresh File List

Select Data File (required)

- Lake Charlene Mast Arm
- A30D-A30DH-P1DL-DS1245
- A30D-A30D-P1DL-DS124
- A30DH-A30DH-P1DL-DS1245
- A30SH-P1SL-DS124
- A30S-P1SL-DS124
- A40D-A30DH-P2DL-DS1445

All data files are in the same directory as the MastArm.xmcd fi

Path = "P:\350271 - HDR Lake Charlene Drainage Study\Struc

DataFile = "Lake Charlene Mast Arm.dat"

Reference

This program works in conjunction with Mastarm Design Standards 17743 and 17745.

Escambia County Board of County Commissioners
c/o Joy Jones, County Engineer
3363 West Park Place
Pensacola, FL 32502

Dear Ms. Jones:

Your application for a Department of the Army permit has been assigned number SAJ-2017-02504 (NW-HMM). A review of the information and drawings provided shows the proposed work is to impact 0.069 acres of wetlands associated with stormwater drainage improvements. The work consists of impacts to 2479 square feet of wetlands for the replacement of the headwall and removal of 105 cubic yards of accumulated sediments (on the north side of Lake Joanne Drive) and 419 square feet of wetlands for the extension of the existing endwall and replacement/rehabilitation of riprap (on the south side of the 61st Avenue and Highway 98 intersection). The project is located at Lake Joanne Drive and South 61st Avenue, Latitude 30.400726° North, Longitude 87.301116° West, in Lake Charlene, Sections 20, 21 and 53, Township 2 South, Range 30 and 31 West, in Escambia County, Florida.

Your project, as depicted on the enclosed drawings, is authorized by Nationwide Permit (NWP) Number 3. In addition, project specific conditions have been enclosed. This verification is valid until **March 18, 2022**. Furthermore, if you commence or are under contract to commence this activity before the date that the relevant nationwide permit is modified or revoked, you will have 12 months from the date of the modification or revocation of the NWP to complete the activity under the present terms and conditions of this nationwide permit. Please access the U.S. Army Corps of Engineers' (Corps) Jacksonville District's Regulatory Internet page to access Internet links to view the Final Nationwide Permits, Federal Register Vol. 82, dated January 6, 2017, specifically pages 1983 to 2008, and the table of Regional Conditions. The Internet page address is:

http://www.saj.usace.army.mil/Missions/Regulatory.aspx

Please be aware this internet address is case sensitive and should be entered as it appears above. Once there you will need to click on “Source Book”; and, then click on “Nationwide Permits.” These files contain the description of the Nationwide Permit authorization, the Nationwide Permit general conditions, and the regional conditions, which apply specifically to this verification for this NWP. Enclosed is a list of the six General Conditions, which apply to all Department of the Army authorizations. You must comply

with all of the special and general conditions and any project specific condition of this authorization or you may be subject to enforcement action. In the event you have not completed construction of your project within the specified time limit, a separate application or re-verification may be required.
The following special conditions are included with this verification:

1. **Reporting Address:** The Permittee shall submit all reports, notifications, documentation and correspondence required by the general and special conditions of this permit to the following address:

   a. For standard mail: U.S. Army Corps of Engineers, Regulatory Division, Enforcement Section, 41 North Jefferson St., Suite 301, Pensacola, FL 32502.

   b. For electronic mail: SAJ-RD-Enforcement@usace.army.mil (not to exceed 10 MB). The Permittee shall reference this permit number, SAJ-2017-02504 (NW-HMM), on all submittals.

2. **Self-Certification:** Within 60 days of completion of the work authorized by this permit, the Permittee shall complete the attached "Self-Certification Statement of Compliance" form and submit it to the Corps. In the event that the completed work deviates in any manner from the authorized work, the Permittee shall describe the deviations between the work authorized by this permit and the work as constructed on the "Self-Certification Statement of Compliance" form. The description of any deviations on the "Self-Certification Statement of Compliance" form does not constitute approval of any deviations by the Corps.

3. **Erosion Control:** Prior to the initiation of any work authorized by this permit, the Permittee shall install erosion control measures along the perimeter of all work areas to prevent the displacement of fill material outside the work area. Immediately after completion of the final grading of the land surface, all slopes, land surfaces, and filled areas shall be stabilized using sod, degradable mats, barriers, or a combination of similar stabilizing materials to prevent erosion. The erosion control measures shall remain in place and be maintained until all authorized work has been completed and the site has been stabilized.

4. **Turbidity Barriers:** Prior to the initiation of any of the work authorized by this permit, the Permittee shall install floating turbidity barriers with weighted skirts that extend to within 1 foot of the bottom around all work areas that are in, or adjacent to, surface waters. The turbidity barriers shall remain in place and be maintained until the authorized work has been completed and all suspended and erodible materials have been stabilized. Turbidity barriers shall be removed upon stabilization of the work area.

5. **Eastern Indigo Snake Protection Measures and Inspection:** Permittee shall comply with U.S. Fish and Wildlife Service's "Standard Protection Measures for the Eastern Indigo Snake" dated August 12, 2013, which can be found at https://www.fws.gov/northflorida/IndigoSnakes/20130812_Eastern_indigo_snake_Standard_Protection_Measures.htm. All gopher tortoise burrows, active or inactive, shall be evacuated prior to site manipulation in the vicinity of the burrow. If excavating potentially occupied burrows, active or inactive, individuals must first obtain state authorization via a Florida Fish and Wildlife Conservation Commission (FWC)

Authorized Gopher Tortoise Agent permit. The excavation method selected shall minimize the potential for injury of an indigo snake. The Permittee shall follow the excavation guidance provided in the most current FWC Gopher Tortoise Permitting Guidelines found at http://myfwc.com/gophertortoise. If an indigo snake is encountered, the snake must be allowed to vacate the area prior to additional site manipulation in the vicinity. Holes, cavities, and snake refugia other than gopher tortoise burrows shall be inspected each morning before planned site manipulation of a particular area, and if occupied by an indigo snake, no work shall commence until the snake has vacated the vicinity of the proposed work.

6. No building or fill materials, tools or other equipment shall be stockpiled within the waters of the United States.

7. All contractors involved in this permitted activity shall be provided copies of this permit in its entirety. A copy shall remain on site at all times during construction.

8. **Agency Changes/Approvals:** Should any other agency require and/or approve changes to the work authorized or obligated by this permit, the Permittee is advised a modification to this permit instrument is required prior to initiation of those changes. It is the Permittee's responsibility to request a modification of this permit from the Pensacola Permits Section. The Corps reserves the right to fully evaluate, amend, and approve or deny the request for modification of this permit.

9. **Cultural Resources/Historic Properties:**

   a. No structure or work shall adversely affect impact or disturb properties listed in the *National Register of Historic Places* (NRHP) or those eligible for inclusion in the NRHP.

   b. If during the ground disturbing activities and construction work within the permit area, there are archaeological/cultural materials encountered which were not the subject of a previous cultural resources assessment survey (and which shall include, but not be limited to: pottery, modified shell, flora, fauna, human remains, ceramics, stone tools or metal implements, dugout canoes, evidence of structures or any other physical remains that could be associated with Native American cultures or early colonial or American settlement), the Permittee shall immediately stop all work and ground-disturbing activities within a 100-meter diameter of the discovery and notify the Corps within the same business day (8 hours). The Corps shall then notify the Florida State Historic Preservation Officer (SHPO) and the appropriate Tribal Historic Preservation Officer(s) (THPO(s)) to assess the significance of the discovery and devise appropriate actions.

   c. Additional cultural resources assessments may be required of the permit area in the case of unanticipated discoveries as referenced in accordance with the above Special Condition ; and if deemed necessary by the SHPO, THPO(s), or Corps, in accordance with 36 CFR 800 or 33 CFR 325, Appendix C (5). Based, on the circumstances of the discovery, equity to all parties, and considerations of the public interest, the Corps may modify, suspend or revoke the permit in accordance with 33 CFR Part 325.7. Such activity shall not resume on non-federal lands without written authorization from the SHPO for finds under his or her jurisdiction, and from the Corps.

d. In the unlikely event that unmarked human remains are identified on non-federal lands, they will be treated in accordance with Section 872.05 Florida Statutes. All work and ground disturbing activities within a 100-meter diameter of the unmarked human remains shall immediately cease and the Permittee shall immediately notify the medical examiner, Corps, and State Archeologist within the same business day (8-hours). The Corps shall then notify the appropriate SHPO and THPO(s). Based, on the circumstances of the discovery, equity to all parties, and considerations of the public interest, the Corps may modify, suspend or revoke the permit in accordance with 33 CFR Part 325.7. Such activity shall not resume without written authorization from the State Archeologist and from the Corps.

This letter of authorization does not give absolute Federal authority to perform the work as specified on your application. The proposed work may be subject to local building restrictions mandated by the National Flood Insurance Program. You should contact your local office that issues building permits to determine if your site is located in a flood-prone area, and if you must comply with the local building requirements mandated by the National Flood Insurance Program.

If you are unable to access the internet or require a hardcopy of any of the conditions, limitations, or expiration date for the above referenced NWP, please contact me by the letterhead address, by email at Holly.M.Millsap@usace.army.mil or by telephone at 850-470-9823.

Thank you for your cooperation with our permit program. The Corps Jacksonville District Regulatory Division is committed to improving service to our customers. We strive to perform our duty in a friendly and timely manner while working to preserve our environment. We invite you to complete our automated Customer Service Survey at http://corpsmapu.usace.army.mil/cm_apex/f?p=regulatory_survey. Please be aware this Internet address is case sensitive; and, you will need to enter it exactly as it appears above. Your input is appreciated – favorable or otherwise.

Sincerely,

Holly Millsap
Project Manager

GENERAL CONDITIONS
33 CFR PART 320-330

1. The time limit for completing the work authorized ends on **March 18, 2022.**

2. You must maintain the activity authorized by this permit in good condition and in conformance with the terms and conditions of this permit. You are not relieved of this requirement if you abandon the permitted activity, although you may make a good faith transfer to a third party in compliance with General Condition 4 below. Should you wish to cease to maintain the authorized activity or should you desire to abandon it without a good faith transfer, you must obtain a modification of this permit from this office, which may require restoration of the area.

3. If you discover any previously unknown historic or archeological remains while accomplishing the activity authorized by this permit, you must immediately notify this office of what you have found. We will initiate the Federal and state coordination required to determine if the remains warrant a recovery effort of if the site is eligible for listing in the National Register of Historic Places.

4. If you sell the property associated with this permit, you must obtain the signature of the new owner in the space provided and forward a copy of the permit to this office to validate the transfer of this authorization.

5. If a conditioned water quality certification has been issued for your project, you must comply with the conditions specified in the certification as special conditions to this permit. For your convenience, a copy of the certification is attached if it contains such conditions.

6. You must allow a representative from this office to inspect the authorized activity at any time deemed necessary to ensure that it is being or has been accomplished in accordance with the terms and conditions of your permit.

DEPARTMENT OF THE ARMY PERMIT TRANSFER REQUEST

Permit Number: SAJ-2017-02504 (NW-HMM)

When the structures or work authorized by this permit are still in existence at the time the property is transferred, the terms and conditions of this permit will continue to be binding on the new owner(s) of the property. Although the construction period for works authorized by Department of the Army permits is finite, the permit itself, with its limitations, does not expire.

To validate the transfer of this permit and the associated responsibilities associated with compliance with its terms and conditions, have the transferee sign and date below and mail to the U.S. Army Corps of Engineers, Enforcement Section, Post Office Box 4970, Jacksonville, FL 32232-0019.

File No. 0358869-001-EG/17, Escambia County

Dear Ms. Jones:

On November 14, 2017, we received your notice of intent to use a General Permit (GP) pursuant to Rule 62-330.451, Florida Administrative Code (F.A.C.) to upgrade an existing drainage structure within unnamed wetlands, Class III Florida Waters. The project is located within the Lake Charlene subdivision, along Lake Joanne Drive and S 61st Street in Pensacola, Florida 32506, in Section 20, Township 02 South, Range 31 West of Escambia County; Latitude 30°24′2.60″ North / Longitude 87°18′4.02″ West.

Your intent to use a general permit has been reviewed by Department staff for three types of authorization: (1) regulatory authorization, (2) proprietary authorization (related to state-owned submerged lands), and (3) federal authorization. The authority for review and the outcomes of the reviews are listed below. Please read each section carefully.

Your project did not qualify for the federal authorization; therefore, additional authorization must be obtained prior to commencement of the proposed activity. This letter does not relieve you from the responsibility of obtaining other federal, state, or local authorizations that may be required for the activity. Please refer to the specific section dealing with that portion of the review below for advice on how to proceed.

If you change the project from what you submitted, the authorizations granted may no longer be valid at the time of commencement of the project. Please contact us prior to beginning your project if you wish to make any changes.

If you have any questions regarding this matter, please contact Chuck Harrell at the letterhead address, at (850)595-0581, or at Charles.Harrell@dep.state.fl.us.

1. Regulatory Review – Approved

Based on the forms, drawings, and documents submitted with your notice, it appears that the project meets the requirements for the General Permit under Rule 62-330.451, F.A.C. Any activities performed under a general permit are subject to general conditions required in Rule 62-330.405, F.A.C. (attached) and the specific conditions of Rule 62-330.451, F.A.C. (attached). Any deviations from these conditions may subject the permittee to enforcement action and possible penalties.

Please be advised that the construction phase of the GP must be completed within five years from the date the notice to use the GP was received by the Department. If you wish to continue this GP beyond the expiration date, you must notify the Department at least 30 days before its expiration.

Authority for review – Part IV of Chapter 373, Florida Statutes (F.S.), Title 62, F.A.C., and in accordance with the operating agreements executed between the Department and the water management districts, as referenced in Chapter 62-113, F.A.C.

2. Proprietary Review – Not Required

The activity does not appear to be located on sovereign submerged lands and does not require further authorization under Chapters 253 or 258, F.S. or Chapters 18-20 or 18-21, F.A.C.

3. Federal Review – SPGP Not Approved

Your proposed activity as outlined on your application and attached drawings **does not qualify** for federal authorization pursuant to the State Programmatic General Permit and a **SEPARATE permit** or authorization **shall be required** from the U.S. Army Corps of Engineers (Corps). You must apply separately to the Corps using the federal application form (ENG 4345). More information about Corps permitting may be found online in the Jacksonville District Regulatory Division Sourcebook. **Failure to obtain Corps authorization prior to construction could subject you to federal enforcement action by that agency.**

Authority for review – an agreement with the Corps entitled "Coordination Agreement Between the U.S. Army Corps of Engineers (Jacksonville District) and the Florida Department of Environmental Protection, or Duly Authorized Designee, State Programmatic General Permit," Section 10 of the Rivers and Harbor Act of 1899, and Section 404 of the Clean Water Act.

Additional Information

Please retain this general permit. The activities may be inspected by authorized state personnel in the future to ensure compliance with appropriate statutes and administrative codes. If the activities are not in compliance, you may be subject to penalties under Chapter 373, F.S. and Chapter 18-14, F.A.C.

NOTICE OF RIGHTS

This action is final and effective on the date filed with the Clerk of the Department unless a petition for an administrative hearing is timely filed under Sections 120.569 and 120.57, F.S. before the deadline for filing a petition. On the filing of a timely and sufficient petition, this action will not be final and effective until further order of the Department. Because the administrative hearing process is designed to formulate final agency action, the hearing process may result in a modification of the agency action or even denial of the application.

Petition for Administrative Hearing

A person whose substantial interests are affected by the Department's action may petition for an administrative proceeding (hearing) under Sections 120.569 and 120.57, F.S. Pursuant to Rules 28-106.201 and 28-106.301, F.A.C., a petition for an administrative hearing must contain the following information:

(a) The name and address of each agency affected and each agency's file or identification number, if known;
(b) The name, address, and telephone number of the petitioner; the name, address, and telephone number of the petitioner's representative, if any, which shall be the address for service purposes during the course of the proceeding; and an explanation of how the petitioner's substantial interests are or will be affected by the agency determination;
(c) A statement of when and how the petitioner received notice of the agency decision;
(d) A statement of all disputed issues of material fact. If there are none, the petition must so indicate;
(e) A concise statement of the ultimate facts alleged, including the specific facts that the petitioner contends warrant reversal or modification of the agency's proposed action;
(f) A statement of the specific rules or statutes that the petitioner contends require reversal or modification of the agency's proposed action, including an explanation of how the alleged facts relate to the specific rules or statutes; and
(g) A statement of the relief sought by the petitioner, stating precisely the action that the petitioner wishes the agency to take with respect to the agency's proposed action.

The petition must be filed (received by the Clerk) in the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, or via electronic correspondence at Agency_Clerk@dep.state.fl.us. Also, a copy of the petition shall be mailed to the applicant at the address indicated above at the time of filing.

Time Period for Filing a Petition

In accordance with Rule 62-110.106(3), F.A.C., petitions for an administrative hearing by the applicant and persons entitled to written notice under Section 120.60(3), F.S., must be filed within 21 days of receipt of this written notice. Petitions filed by any persons other than the applicant, and other than those entitled to written notice under Section 120.60(3), F.S., must be filed within 21 days of publication of the notice or within 21 days of receipt of the written notice, whichever occurs first. The failure to file a petition within the appropriate time period shall constitute a waiver of that person's right to request an administrative determination (hearing) under Sections 120.569 and 120.57, F.S. or to intervene in this proceeding and participate as a party to it. Any subsequent intervention (in a proceeding initiated by another party) will be only

at the discretion of the presiding officer upon the filing of a motion in compliance with Rule 28-106.205, F.A.C.

Extension of Time
Under Rule 62-110.106(4), F.A.C., a person whose substantial interests are affected by the Department's action may also request an extension of time to file a petition for an administrative hearing. The Department may, for good cause shown, grant the request for an extension of time. Requests for extension of time must be filed with the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, or via electronic correspondence at Agency_Clerk@dep.state.fl.us, before the deadline for filing a petition for an administrative hearing. A timely request for extension of time shall toll the running of the time period for filing a petition until the request is acted upon.

Mediation
Mediation is not available in this proceeding.

FLAWAC Review
The applicant, or any party within the meaning of Section 373.114(1)(a) or 373.4275, F.S., may also seek appellate review of this order before the Land and Water Adjudicatory Commission under Section 373.114(1) or 373.4275, F.S. Requests for review before the Land and Water Adjudicatory Commission must be filed with the Secretary of the Commission and served on the Department within 20 days from the date when this order is filed with the Clerk of the Department.

Judicial Review
Once this decision becomes final, any party to this action has the right to seek judicial review pursuant to Section 120.68, F.S. by filing a Notice of Appeal pursuant to Florida Rules of Appellate Procedure 9.110 and 9.190 with the Clerk of the Department in the Office of General Counsel (Station #35, 3900 Commonwealth Boulevard, Tallahassee, Florida 32399-3000) and by filing a copy of the Notice of Appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice must be filed within 30 days from the date this action is filed with the Clerk of the Department.

EXECUTION AND CLERKING
Executed in Orlando, Florida.

Date

62-330.451 General Permit to Counties, Municipalities, and other Agencies to Conduct Stormwater Retrofit Activities.

(1) A general permit is granted to counties, municipalities, state agencies and water management districts to construct, operate and maintain stormwater retrofit activities as authorized below for improving existing surface water and stormwater systems. This general permit may be used in conjunction with exempt activities.

(2) Types of stormwater retrofit activities authorized under this general permit are:

(a) Construction or alteration that will add additional treatment or attenuation capacity and capability to an existing stormwater management system;

(b) The modification, reconstruction, or relocation of an existing stormwater management system or stormwater discharge facility;

(c) Stabilization of eroding banks, and installation of structures such as gabions to limit sidebank erosion; or

(d) Excavation or dredging to remove sediments or other pollutants that have accumulated in existing surface waters as a result of stormwater runoff and stormwater discharges, provided the material removed is not deposited in existing wetlands or other surface waters.

(3) Stormwater retrofit activities shall not:

(a) Be proposed or implemented for the purpose of providing the water quality treatment or flood control needed to serve new development or redevelopment; or

(b) Include a dam that has more than 50 acre-feet of storage capacity if the dam is more than five feet high, nor a dam having a height of ten or more feet, regardless of storage capacity. Height is measured from the top of the dam to the natural bed of the stream or watercourse at the downward toe of the dam, or from the lowest elevation of the outside limit of the dam to the maximum elevation of the dam.

(4) There is no limit to the acreage of stormwater retrofit activities in artificial waters. Work in wetlands and non-artificial surface waters shall be limited to no more than 0.5 acre.

(5) A stormwater quality retrofit activity must result in at least one of the following:

(a) Addition of treatment capacity to an existing stormwater management system such that it reduces stormwater pollutant loadings to receiving waters;

(b) Addition of treatment or attenuation capability to an existing developed area when either the existing stormwater management system or the developed area has substandard stormwater treatment or attenuation capabilities, compared to what would be required for a new system requiring a permit under Part IV of Chapter 373, F.S.; or

(c) Removal of pollutants generated by, or resulting from, previous stormwater discharges.

(6) A water quantity retrofit project proposed to reduce existing flooding problems must be designed in such a way that the project does not:

(a) Result in a net reduction in water quality treatment provided by the existing stormwater management system;

(b) Increase discharges of untreated stormwater entering receiving waters;

(7) The project must be designed, constructed, and implemented so that it will be implemented as a complete, stand-alone project within the construction phase duration of a general permit, and such that it will not at any time during its construction or operation:

(a) Cause or contribute to any water quality violations;

(b) Contribute to any existing violation if it discharges pollutants into waters where existing ambient water quality does not meet water quality standards for those pollutants. In such a case,

the project must include measures that will cause a net improvement in the receiving waters for those pollutants in accordance with Section 373.414(1)(b)3., F.S.;

(c) Adversely affect the value of functions provided to fish and wildlife by wetlands or other surface waters;

(d) Adversely affect the hydroperiod of wetlands on adjacent lands or the hydroperiod of other wetlands upstream, downstream, or adjoining to the work area under subsection (4), above;

(e) Cause or contribute to increased flooding of adjacent lands or cause new adverse water quantity impacts to receiving waters;

(f) Add or increase any chemical treatment;

(g) Be operated by pumps or other mechanical or adjustable features;

(h) Adversely impact the maintenance of surface or ground water levels or surface water flows established pursuant to Section 373.042, F.S.

(8) The entity conducting this general permit must conduct at least one pre-notice meeting with Agency staff having responsibility for the review of the proposed activities. The notice required in Rule 62-330.402, F.A.C., shall include materials reflecting the recommendations of the Agency discussed during that meeting, and demonstrating compliance with the above, including a certification by a registered professional that the proposed activity will meet the criteria specified above. Such certification shall include appropriate design analyses, pollutant loading analyses, modeling and other engineering calculations, drawings, specifications and other information to support, describe, verify, and document the registered professional's certification.

(9) Nothing in this general permit will preclude a county or municipality from obtaining and implementing a Basin Management Action Plan with water quality credits for activities performed under this authorization.

(10) Within 30 days after completion of construction, a registered professional shall submit certification that construction was completed in substantial conformance with the plans and calculations that were submitted in the notice to use this general permit.

Rulemaking Authority 373.026(7), 373.043, 373.118(1), 373.118(6), 373.406(5), 373.4131, 373.414(9), 373.418, 403.805(1) FS. Law Implemented 373.118(1), (6), 373.406(5), 373.413, 373.4131, 373.414(9), 373.416, 373.418 FS. History–New 10-1-13.

62-330.405 General Conditions for All General Permits

The following general permit condiitons are binding upon the permittee and are enforceable under Chapter 373, F.S. These conditions do not apply to the general permit in Section 403.814(12), F.S.

(1) The general permit is valid only for the specific activity indicated. Any deviation from the specified activity and the conditions for undertaking that activity shall constitute a violation of the permit and may subject the permittee to enforcement action and revocation of the permit under Chapter 373, F.S.

(2) This general permit does not eliminate the necessity to obtain any required federal, state, local and special district authorizations prior to the start of any construction, alteration, operation, maintenance, removal or abandonment authorized by this permit.

(3) This general permit does not convey to the permittee or create in the permittee any property right, or any interest in real property, nor does it authorize any entrance upon or activities on property which is not owned or controlled by the permittee, or convey any rights or privileges other than those specified in the general permit.

(4) The general permit does not relieve the permittee from liability and penalties when the permitted activity causes harm or injury to: human health or welfare; animal, plant or aquatic life; or property. It does not allow the permittee to cause pollution that violates state water quality standards.

(5) Section 253.77, F.S., provides that a person may not commence any excavation, construction, or other activity involving the use of state-owned or other lands of the state, the title to which is vested in the Board of Trustees of the Internal Improvement Trust Fund without obtaining the required consent, lease, easement, or other form of authorization authorizing the proposed use. Therefore, the permittee is responsible for obtaining any necessary authorizations from the Board of Trustees prior to commencing activity on state-owned lands.

(6) The authorization to conduct activities under a general permit may be modified, suspended or revoked in accordance with Chapter 120, F.S., and Section 373.429, F.S.

(7) This permit shall not be transferred to a third party except pursuant to Rule 62-330.340, F.A.C. The permittee transferring the general permit shall remain liable for any corrective actions that may be required as a result of any permit violations prior to sale, conveyance, or other transfer of ownership or control of the permitted project, activity, or the real property at which the permitted project or activity is located.

(8) Upon reasonable notice to the permittee, Agency staff with proper identification shall have permission to enter, inspect, sample and test the permitted system to ensure conformity with the plans and specifications approved by the permit.

(9) The permittee shall maintain any permitted project or activity in accordance with the plans submitted to the Agency and authorized in this general permit.

(10) A permitee’s right to conduct a specific activity under this general permit is authorized for a duration of five years.

(11) Activities shall be conducted in a manner that does not cause or contribute to violations of state water quality standards. Performance-based erosion and sediment control best management practices shall be implemented and maintained immediately prior to, during, and after construction as needed to stabilize all disturbed areas, including other measures specified in the permit to prevent adverse impacts to the water resources and adjacent lands. Erosion and sediment control measures shall be installed and maintained in accordance with the *State of*

Florida Erosion and Sediment Control Designer and Reviewer Manual (Florida Department of Environmental Protection and Florida Department of Transportation June 2007), available at www.dep.state.fl.us/water/wetlands/docs/erp/FLErosionSedimentManual_6_07.pdf, and the *Florida Stormwater Erosion and Sedimentation Control Inspector's Manual* (Florida Department of Environmental Protection, Nonpoint Source Management Section, Tallahassee, Florida, July 2008), available at www.dep.state.fl.us/water/nonpoint/docs/erosion/erosion-inspectors-manual.pdf.

(12) Unless otherwise specified in the general permit, temporary vehicular access within wetlands during construction shall be performed using vehicles generating minimum ground pressure to minimize rutting and other environmental impacts. Within forested wetlands, the permittee shall choose alignments that minimize the destruction of mature wetland trees to the greatest extent practicable. When needed to prevent rutting or soil compaction, access vehicles shall be operated on wooden, composite, metal, or other non-earthen construction mats. In all cases, access in wetlands shall comply with the following:

(a) Access within forested wetlands shall not include the cutting or clearing of any native wetland tree having a diameter 4 inches or greater at breast height;

(b) The maximum width of the construction access area shall be limited to 15 feet;

(c) All mats shall be removed within 72 hours after the work commences; and

(d) Areas disturbed for access shall be restored to natural grades immediately after the maintenance or repair is completed.

(13) Barges or other work vessels used to conduct in-water activities shall be operated in a manner that prevents unauthorized dredging, water quality violations, and damage to submerged aquatic communities.

(14) The construction, alteration, or use of the authorized project shall not adversely impede navigation or create a navigational hazard in the water body.

(15) Except where specifically authorized in a general permit, activities must not:

(a) Impound or obstruct existing water flow, cause adverse impacts to existing surface water storage and conveyance capabilities, or otherwise cause adverse water quantity or flooding impacts to receiving water and adjacent lands;

(b) Cause an adverse impact to the maintenance of surface or ground water levels or surface water flows established pursuant to Section 373.042, F.S., or a Works of the District established pursuant to Section 373.086, F.S.; or

(16) If any prehistoric or historic artifacts, such as pottery or ceramics, stone tools or metal implements, dugout canoes, or any other physical remains that could be associated with Native American cultures, or early colonial or American settlement are encountered at any time within the project site area, work involving subsurface disturbance in the immediate vicinity of such discoveries shall cease. The permittee or other designee shall contact the Florida Department of State, Division of Historical Resources, Compliance and Review Section, at (850) 245-6333 or (800) 847-7278, as well as the appropriate permitting agency office. Such subsurface work shall not resume without verbal or written authorization from the Division of Historical Resources. If unmarked human remains are encountered, all work shall stop immediately and notification shall be provided in accordance with Section 872.05, F.S.

(17) The activity must be capable, based on generally accepted engineering and scientific principles, of being performed and of functioning as proposed, and must comply with any applicable District special basin and geographic area criteria.

(18) The permittee shall comply with the following when performing work within waters accessible to federally- or state-listed aquatic species, such as manatees, marine turtles, smalltooth sawfish, and Gulf sturgeon:

(a) All vessels associated with the project shall operate at "Idle Speed/No Wake" at all times while in the work area and where the draft of the vessels provides less than a four-foot clearance from the bottom. All vessels will follow routes of deep water whenever possible.

(b) All deployed siltation or turbidity barriers shall be properly secured, monitored, and maintained to prevent entanglement or entrapment of listed species.

(c) All in-water activities, including vessel operation, must be shut down if a listed species comes within 50 feet of the work area. Activities shall not resume until the animal(s) has moved beyond a 50-foot radius of the in-water work, or until 30 minutes elapses since the last sighting within 50 feet. Animals must not be herded away or harassed into leaving. All on-site project personnel are responsible for observing water-related activities for the presence of listed species.

(d) Any listed species that is killed or injured by work associated with activities performed shall be reported immediately to the Florida Fish and Wildlife Conservation Commission (FWC) Hotline at 1 (888) 404-3922 and ImperiledSpecies@myFWC.com.

(e) Whenever there is a spill or frac-out of drilling fluid into waters accessible to the above species during a directional drilling operation, the FWC shall be notified at imperiledspecies@myfwc.com with details of the event within 24 hours following detection of the spill or frac-out.

(19) The permittee shall hold and save the Agency harmless from any and all damages, claims, or liabilities which may arise by reason of the construction, alteration, operation, maintenance, removal, abandonment or use of any activity authorized by the general permit.

(20) The permittee shall immediately notify the Agency in writing of any submitted information that is discovered to be inaccurate.

650-1-14	Traffic Signal, F&I, Alum., 3 Section, 1 Way	3	AS
650-1-18	Traffic Signal, F&I, Alum., 5 Section Straight, 1 Way	1	AS
660-2-101	Loop Assembly, F&I, Type A	1	AS
700-3-501	Sign Panel, Relocate, Up To 12 SF	2	EA

IITEM 1:
IT IS THE CONTRACTOR'S RESPONSIBILITY TO SELECT AND GAIN PERMISSION TO USE SITES/PARCELS WHICH ARE LOCATED OUTSIDE THE COUNTY'S RIGHT-OF-WAY OR MAINTENANCE CLAIM AREAS FOR LAYDOWN OR TEMPORARY EARTHWORK DISPOSAL (INCLUDING SEDIMENT CONTROL). THE CONTRACTOR SHALL RETURN ALL SITES USED FOR THESE PURPOSES TO ORIGINAL CONDITION OR BETTER. ANY COSTS ASSOCIATED WITH THE ABOVE SHALL BE INCLUDED IN THE COST OF MOBILIZATION/DEMOBILIZATION.

ITEM 2:
ITEM INCLUDES ALL ITEMS TO BE REMOVED FOR THE CONSTRUCTION OF THE PROJECT INCLUDING TREES, ROADWAYS, DRIVEWAYS, CURB AND GUTTER, FLUMES AND ALL OTHER ITEMS NOT LISTED AS A REMOVAL PAY ITEM. THE CONTRACTOR SHALL FAMILIARIZE HIMSELF WITH THE AMOUNT, LOCATION, AND SIZE OF TREES TO BE REMOVED BEFORE BIDDING.

ITEM 3:
EARTHWORK IS A LUMP SUM PAY ITEM AND IS LIMITED TO AREAS ADJACENT TO THE TWO ENDWALL LOCATIONS. DREDGING OF A PORTION OF THE CANAL, AS SHOWN IN THE PLANS, IS INCLUDED IN THIS PAY ITEM. THIS PAY ITEM DOES NOT INCLUDE EARTHWORK ASSOCIATED WITH PIPE INSTALLATION OR ROADWAY RECONSTRUCTION.

ITEM 4:
EARTHWORK ESTABLISHING GRADE INCLUDES ALL GRADING FROM THE EDGE OF PROPOSED PAVEMENT TO THE LIMITS OF CONSTRUCTION. THIS INCLUDES RE-ESTABLISHING ALL SHOULDER AND DITCH GRADES AS SHOWN IN THE PLANS AND CROSS SECTIONS.

ITEM 5:
THIS ITEM IS INTENDED TO COVER THE CONTRACTOR'S MEANS AND METHODS FOR CONSTRUCTION OF THE WEIR/ENDWALL/SHEET PILING AT THE END OF THE CANAL. THIS MAY INCLUDE BUT IS NOT LIMITED TO DEWATERING OF THE AREA, TEMPORARILY PUMPING DOWN THE WATER SURFACE ELEVATION, OR BYPASS PUMPING IN WORK AREAS.

ITEM 6:
THIS ITEM INCLUDES ALL ITEMS AND PHASES NECESSARY TO DEWATER THE TRENCHES FOR STORMWATER SYSTEM INSTALLATION.

ITEM 8:
ITEM INTENDED FOR THE RESURFACING OF MILLED AREAS.

ITEM 11:
ITEM IS INTENDED FOR WORK CROSSING US 98. THE PAVEMENT DESIGN FOR THE LATERAL PAVEMENT PATCH MATCHES THE EXISTING PAVEMENT DESIGN FOR US 98. SEE PLAN DETAIL.

ITEM 12:
SAW CUT QUANTITY IS INTENDED FOR LOCATIONS WERE RECONSTRUCTION LIMITS END. SAW CUTTING FOR US 98 IS INCLUDED IN THE COST OF LATERAL PAVEMENT PATCH.

ITEM 17:
QUANTITY INCLUDES COST TO CONSTRUCT FLUME THAT FLOWS OVER HEADWALL LOCATED OFF LAKE JOANNE DR. FLUME AREA IS 14SY.

ITEM 20:
INCLUDES THE TOP AND BOTTOM OF DRAINAGE STRUCTURES. MANHOLE ACCESS LOCATIONS SHALL AVOID THE WHEEL PATH OF ROADWAYS BY LOCATING ALONG THE CENTERLINE OF THE ROADWAY OR CENTER OF THE TRAVEL LANE.

ITEM 21:
ITEM IS FOR CONNECTION OF EXISTING PIPE TO PROPOSED DRAINAGE STRUCTURES.

ITEMS 22-26:
ALL SHORING REQUIRED FOR PIPE INSTALLATION IS INCLUDED IN THE COST OF PIPE. DEWATERING IS INCLUDED IN OTHER ITEMS. THE COST OF REMOVAL AND REPLACEMENT OF UNSUITABLE MATERIAL IS INCLUDED IN THE COST OF PIPE. SEE GEOTECHNICAL REPORT FOR LIMITS OF UNSUITABLE MATERIAL. AT A MINIMUM, UNSUITABLE MATERIAL IS LIKELY TO BE ENCOUNTERED AT PIPE ELEVATIONS ALONG THE SOUTHERN 1300 FEET OF THE PROJECT.

ITEM 29:
SOD ALL AREAS OF DISTURBANCE FROM R/W TO R/W. SOD THICKNESS SHOULD BE CONSIDERED WHEN PLACING ON FINAL GRADES SO THAT STORMWATER RUNOFF IS NOT IMPEDED SUCH AS AT THE EDGE OF PAVEMENT OR DRIVEWAYS. SODDING OR SEEDING OF DISTURBANCE OUTSIDE THE R/W SHALL BE INCLUDED IN THE COST OF MOBILIZATION/DEMOBILIZATION.

ITEM 31:
CONTRACTOR SHALL SUBMIT A PLAN FOR COUNTY APPROVAL. ITEM INCLUDES NPDES PERMITTING.

ITEMS 33-36:
INCLUDES LAYOUT, PAINT, AND THERMOPLASTIC APPLICATION WITHIN COUNTY RIGHT-OF-WAY. INCLUDES TEMPORARY AND PERMANENT RPMS. ALL PAVEMENT MARKINGS ASSOCIATED WITH MOT SHALL BE INCLUDED IN THE COST OF MOT.

ITEM 37:
CONTRACTOR SHALL SUBMIT A PLAN FOR COUNTY APPROVAL. ITEM INCLUDES BUT IS NOT LIMITED TO DETOUR SIGNAGE, WORK ZONE SIGNAGE, DRUMS, PCMS'S, PAVEMENT MARKINGS, AND INSTALLATION AND REMOVAL OF COMMERCIAL MATERIAL FOR LOCAL DRIVEWAY/ROADWAY ACCESS AS REQUIRED.

ITEM 38:
CONTRACTOR SHALL SUBMIT A PLAN FOR FDOT APPROVAL. ITEM INCLUDES BUT IS NOT LIMITED TO TEMPORARY ASPHALT, EARTHWORK, BARRIER WALL, WORK ZONE & DETOUR SIGNAGE, DRUMS, PCMS'S, PAVEMENT MARKINGS AND ITEMS TO BE TEMPORARILY RELOCATED FOR MULTIPLE PHASES. PLAN MAY REQUIRE MULTIPLE SUBMITTALS TO FDOT.

ITEM 39:
ITEM COVERS ALL RIPRAP CEMENT SAND AND RIPRAP RUBBLE QUANTITIES SHOWN ON SHEET S007.

ITEM 40:
ITEM COVERS FINAL PLACEMENT OF PERMANENT MARKINGS, INCLUDING RPM'S IN FDOT R/W. MARKINGS TO MATCH EXISTING MARKINGS AND SHALL COVER THE LIMITS OF CONTRACTOR'S MOT PLAN.

PAY ITEMS 632-2-12 THRU 700-3-501:
THESE PAYITEMS ARE DIRECTLY FROM THE MOST CURRENT VERSION OF THE FLORIDA DEPARTMENT BASIS OF ESTIMATES MANUAL.

NOTES

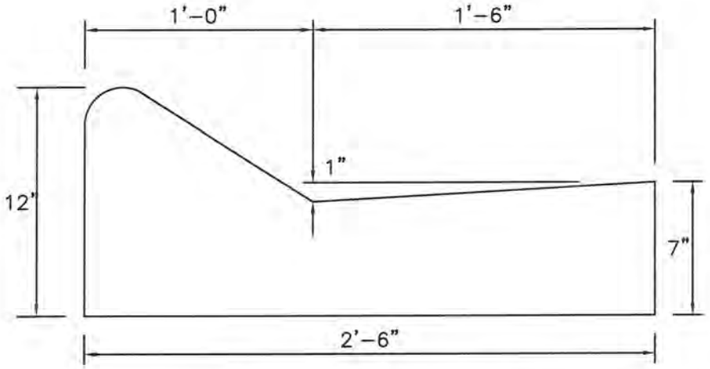
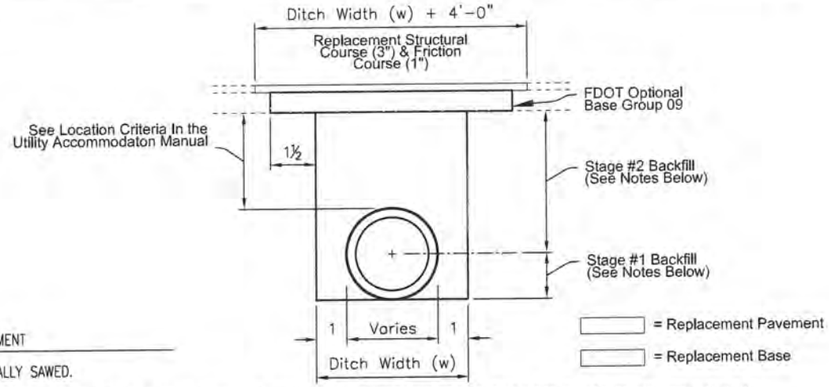
1. LIMITS OF CONSTRUCTION SHALL BE FROM EDGE OF PAVEMENT TO EDGE OF PAVEMENT UNLESS OTHERWISE DIRECTED.



TYPE 'B' CURB & GUTTER
FOR CURB MACHINE
NOT TO SCALE

NOTE:

1. ALL CURB TO HAVE DUMMY JOINT AT 10' ON CENTER. MIN. DEPTH OF JOINT TO BE 2".
2. EXPANSION JOINTS ARE TO BE 60' ON CENTER. TYPICAL FOR ALL CURB.
3. CONCRETE TO BE 3000 PSI.



NOTES:

PAVEMENT REMOVAL AND REPLACEMENT

1. PAVEMENT SHALL BE MECHANICALLY SAWED.
2. THE REPLACEMENT ASPHALT SHALL MATCH THE EXISTING STRUCTURAL AND FRICTION COURSES FOR TYPE AND THICKNESS IN ACCORDANCE WITH CURRENT FDOT ASPHALT MIX SPECIFICATIONS.
3. THE NEW BASE MATERIALS SHALL BE EITHER OF THE SAME TYPE AND COMPOSITION AS THE MATERIALS REMOVED OR OF EQUAL OR GREATER STRUCTURAL ADEQUACY (SEE FDOT PAVEMENT DESIGN MANUAL).

BACKFILL OPTION

1. COMPACTED AND STABILIZED FILL
   A. BACKFILL MATERIAL SHALL BE PLACED IN ACCORDANCE WITH SECTION 125 OF THE STANDARD SPECIFICATIONS.
   B. IN STAGE #1, CONSTRUCT COMPACTED FILL BENEATH THE HAUNCHES OF THE PIPE, USING MECHANICAL TAMPS SUITABLE FOR THIS PURPOSE. THIS COMPACTION APPLIES TO THE MATERIAL PLACED BENEATH THE HAUNCHES OF THE PIPE AND ABOVE ANY BEDDING.
   C. IN STAGE #2, CONSTRUCT COMPACTED FILL ALONG THE SIDES OF THE PIPE AND UP TO THE BOTTOM OF THE BASE, WITH THE UPPER 12" RECEIVING TYPE B STABILIZATION. IN LIEU OF TYPE B STABILIZATION, THE CONTRACTOR MAY CONSTRUCT USING OPTIONAL BASE GROUP 3.
2. FLOWABLE FILL
   A. IF COMPACTION CAN NOT BE ACHIEVED THROUGH NORMAL MECHANICAL METHODS THEN FLOWABLE FILL MAY BE USED.
   B. FLOWABLE FILL IS TO BE PLACED IN ACCORDANCE WITH SECTION 121 OF THE SPECIFICATIONS, AS APPROVED BY THE ENGINEER.
   C. DO NOT ALLOW THE UTILITY BEING INSTALLED TO FLOAT. IF A METHOD IS PROVIDED TO PREVENT FLOTATION FROM OCCURRING, STAGES #1 AND #2 CAN BE COMBINED, IF APPROVED BY THE ENGINEER.
   D. IN STAGE #1, PLACE FLOWABLE FILL MIDWAY UP ON BOTH SIDES OF THE UTILITY. ALLOW TO HARDEN BEFORE PLACING STAGE #2.
   E. IN STAGE #2, PLACE FLOWABLE FILL TO THE BOTTOM OF THE EXISTING BASE COURSE.

GENERAL NOTES

1. THE DETAILS PROVIDED IN THIS STANDARD INDEX APPLY TO CASES IN WHICH JACK AND BORE OR DIRECTIONAL BORING METHODS ARE NOT REQUIRED BY THE ENGINEER.
2. FLOWABLE FILL SHALL NOT BE PLACED DIRECTLY OVER LOOSE, OR HIGH PLASTIC, OR MUCK MATERIAL (SEE INDEX 505) WHICH WILL CAUSE SETTLEMENT DUE TO FILL WEIGHT. WHERE HIGHLY COMPRESSIBLE MATERIAL EXISTS, THE AMOUNT, SHAPE AND DEPTH OF FLOWABLE FILL MUST BE ENGINEERED TO PREVENT PAVEMENT SETTLEMENT.
3. THESE DETAILS DO NOT APPLY TO UTILITY CUTS LONGITUDINAL TO THE CENTERLINE OF THE ROADWAY WHICH MAY REQUIRE THE ADDITIONAL USE OF GEOTEXTILES, SPECIAL BEDDING AND BACKFILL, OR OTHER SPECIAL REQUIREMENTS.
4. METHOD OF CONSTRUCTION MUST BE APPROVED BY THE ENGINEER.
5. SOME PIPE MAY REQUIRE SPECIAL GRANULAR BACKFILL UP TO 6" ABOVE TOP OF PIPE. GEOTEXTILES MAY BE REQUIRED TO ENCAPSULATE THE SPECIAL GRANULAR MATERIAL.
6. WHERE ASPHALT CONCRETE OVERLAYS EXIST OVER FULL SLAB CONCRETE PAVEMENT, THE REPLACEMENT PAVEMENT SHALL HAVE AN OVERLAY CONSTRUCTED OVER THE REPLACEMENT SLAB. THE OVERLAY SHALL MATCH THE EXISTING ASPHALT PAVEMENT THICKNESS. THE REPLACEMENT FRICTION COURSE SHALL MATCH THE EXISTING FRICTION COURSE, EXCEPT STRUCTURAL COURSE MAY BE USED IN LIEU OF DENSE GRADED FRICTION COURSE.
7. ALL SHOULDER PAVEMENT, CURB, CURB AND GUTTER, AND THEIR SUPPORTING BASE DISTURBED BY UTILITY TRENCH CUT CONSTRUCTION SHALL BE RESTORED IN KIND.
8. THE USE OF FLOWABLE FILL TO REDUCE THE TIME TRAFFIC IS TAKEN OFF A FACILITY IS ENCOURAGED BUT MUST HAVE PRIOR APPROVAL BY THE ENGINEER. FLOWABLE FILL USE IS ALLOWED ONLY WHEN PROPERLY ENGINEERED FOR PAVEMENT CROSS SECTION, WHETHER STRAIGHT OR DIAGONAL, AND SHALL NOT BE INSTALLED FOR SIGNIFICANT DEPTHS OR LENGTHS. THE MINIMUM LENGTH SHALL BE FIFTY (50) FEET AND A MAXIMUM DEPTH OF SIX (6) FEET UNLESS SUPPORTED BY AN ENGINEERING DOCUMENT PREPARED BY A REGISTERED PROFESSIONAL ENGINEER THAT SPECIALIZES IN SOILS ENGINEERING. THE ENGINEERING DOCUMENT SHALL ADDRESS THE EVALUATION OF THE GROUNDWATER FLOW INTERACTION AND SETTLEMENT POTENTIAL.
9. EXCAVATABLE FLOWABLE FILL IS TO BE USED WHEN [illegible] FLOWABLE BACKFILL IS SPECIFIED.

PROJECT LAYOUT

0 75 150
11 X 17 SCALE: 1" = 150'

SHEET 6

GENERAL NOTES:

1. THE CONTRACTORS SHALL NOTIFY THE COUNTY DESIGN ENGINEER OR DESIGNEE 48 HOURS PRIOR TO CONSTRUCTION.
2. ALL CONDITIONS AND STIPULATIONS OF THE CONSTRUCTION PERMITS AND THE APPROVALS ISSUED BY THE ESCAMBIA COUNTY ENGINEER SHALL BE COMPLIED WITH IN EVERY DETAIL.
3. ANY DAMAGE TO ROADWAYS OR ADJACENT PRIVATE PROPERTIES CAUSED BY THE CONTRACTORS OPERATIONS SHALL BE REPAIRED BY THE CONTRACTOR AT THE CONTRACTOR'S SOLE EXPENSE.
4. THE CONTRACTOR SHALL TAKE STEPS NECESSARY TO PREVENT EROSION AND ANY OFF SITE SEDIMENT TRANSPORT RESULTING FROM INCREASED RUNOFF DURING CONSTRUCTION BY PROVIDING SILT FENCE AND/OR STAKED HAY BALES AS REQUIRED BY FDOT EROSION AND SEDIMENT CONTROL INSPECTOR'S MANUAL, 2012 EDITION, OR AS INDICATED ON THE PLANS. ALL EROSION CONTROL MEASURES SHALL REMAIN IN PLACE UNTIL ASSOCIATED DISTURBED AREAS ARE STABILIZED AS TO REDUCE SEDIMENT RUNOFF, UNLESS OTHERWISE DIRECTED BY THE ENGINEER OR DESIGNEE.
5. ANY NECESSARY PERMITS WILL BE THE RESPONSIBILITY OF THE CONTRACTOR. ESCAMBIA COUNTY OR ITS DESIGNEE WILL ASSIST CONTRACTOR WITH REQUIRED PERMITS.
6. THE CONTRACTOR IS CAUTIONED TO VISIT THE SITE AND FAMILIARIZE HIMSELF WITH THE PROJECT PRIOR TO BIDDING AND/OR CONSTRUCTION.
7. IT SHALL BE THE CONTRACTORS RESPONSIBILITY TO PRESERVE OR RELOCATE ALL BENCHMARKS (VERTICAL CONTROL) AS NEEDED DURING CONSTRUCTION. ALL PUBLIC OR PRIVATE CORNER MONUMENTATION SHALL BE PROTECTED. IF A PUBLIC OR PRIVATE CORNER MONUMENTATION IS IN DANGER OF BEING DESTROYED AND HAS NOT BEEN PROPERLY REFERENCED, THE CONTRACTOR SHALL NOTIFY THE ENGINEER OR DESIGNEE IMMEDIATELY. ANY ESCAMBIA COUNTY HARN/GPS NETWORK MONUMENTS OR BUREAU OF SURVEY AND MAPPING GPS NETWORK MONUMENTS WITHIN THE LIMITS OF CONSTRUCTION SHALL BE PROTECTED. IF A HARN/GPS NETWORK MONUMENTS OR BUREAU OF SURVEY AND MAPPING GPS NETWORK MONUMENTS ARE DISTURBED OR DESTROYED THE CONTRACTOR SHALL BE RESPONSIBLE FOR RELACEMENT OF THE MONUMENTS AND HAVE THE MONUMENTS POSITION DETERMINED BY A FLORIDA LICENSED PROFESSIONAL SURVEYOR AND MAPPER USING GUIDELINES AS ESTABLISHED BY NATIONAL GEODETIC SURVEY FOR BLUE BOOKING AND APPROVAL.
8. EXISTING DRAINAGE FEATURES WITHIN CONSTRUCTION LIMITS SHALL REMAIN UNLESS OTHERWISE NOTED.
9. THE CONTRACTOR SHALL MATCH EXISTING CONDITIONS AT THE BEGINNING AND END OF CONSTRUCTION AS DIRECTED BY THE COUNTY ENGINEER OR DESIGNEE.
10. EXISTING STREETS AND DRIVES SHALL BE MAINTAINED TO LOCAL TRAFFIC AND PROPERTY OWNERS.
11. ALL ROADWAY CONSTRUCTION SHALL COMPLY WITH THE ESCAMBIA COUNTY TECHNICAL SPECIFICATIONS, LATEST EDITION.
12. ALL MATERIALS, TESTING AND CONSTRUCTION METHODS SHALL CONFORM TO THE ESCAMBIA COUNTY TECHNICAL SPECIFICATIONS, LATEST EDITION.
13. ANY REFERENCE TO FDOT STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION, LATEST EDITION, DIVISION 1, GENERAL REQUIREMENTS AND COVENANTS, SHALL BE EXCLUDED AND NOT APPLICABLE TO ANY SPECIFICATION REFERRED HEREIN OR OTHERWISE LISTED IN THESE PLANS OR RELATED DOCUMENTS OR THE ESCAMBIA COUNTY TECHNICAL SPECIFICATIONS.
14. EXISTING STREET AND ROAD NAME SIGNS ON THE PROJECT SHALL BE KEPT VISIBLE AT ALL TIMES FOR THE FACILITATION OF ACCESS BY EMERGENCY VEHICLES. ALL OTHER EXISTING SIGNS THAT CONFLICT WITH CONSTRUCTION OPERATIONS SHALL BE TAKEN DOWN AND STOCKPILED WITHIN THE R/W LIMITS BY THE CONTRACTOR AS DIRECTED BY THE COUNTY ENGINEER OR DESIGNEE. ANY EXISTING SIGNS THAT ARE TO BE RELOCATED AND ARE DAMAGED BEYOND USE BY THE CONTRACTOR SHALL BE REPLACED BY THE CONTRACTOR AT HIS EXPENSE.
15. CONTRACTOR SHALL COMPLY WITH ALL F.D.E.P. AND ARMY CORP. OF ENGINEERS REQUIREMENTS.
16. ONLY ACCESS TO THE ROAD R/W AS SHOWN IS GUARANTEED BY THE COUNTY. PRIVATE R/W REQUIRED BY THE CONTRACTOR TO FACILITATE CONSTRUCTION SHALL BE ACQUIRED BY THE CONTRACTOR WITH NO ADDITIONAL COMPENSATION OR ASSISTANCE FROM THE COUNTY.
17. IN THE EVENT THAT SURVEY MONUMENTATION OR REFERENCE POINTS ARE MISSING OR HAVE BEEN DESTROYED, PLEASE CONTACT:

DANNY SWAIN
3363 WEST PARK PLACE
PENSACOLA, FLORIDA 32505 PH (850) 595-3427

ERIC STUART, PMS
NOBLES CONSULTING GROUP
600 UNIVERSITY OFFICE BLVD., SUITE 17-B
PENSACOLA, FL. 32504, (850) 857-7723

18. VEGETATION ON R/W AND EASEMENTS SHALL BE RESTORED TO ORIGINAL CONDITION UNLESS OTHERWISE NOTED ON THE PLAN SHEETS. COST OF SAID RESTORATION SHALL BE CONSIDERED INCIDENTAL TO OTHER PAY ITEMS.
19. ALL TREES WITHIN LIMITS OF CONSTRUCTION SHALL BE REMOVED UNLESS OTHERWISE NOTED IN PLANS.
20. ALL COMPACTED FILL SHALL BE PLACED IN 4" LIFTS FOR HAND POWERED TAMPERS AND 8" LIFTS FOR HEAVY EQUIPMENT OPERATED TAMPERS.
21. IF ARCHAEOLOGICAL MATERIAL/PREHISTORIC ARTIFACTS SUCH AS POTTERY OR CERAMICS, STONE TOOLS OR METAL IMPLEMENTS, OR ANY OTHER PHYSICAL REMAINS THAT COULD BE ASSOCIATED WITH NATIVE AMERICAN CULTURES, OR EARLY COLONIAL OR AMERICAN SETTLEMENT ARE ENCOUNTERED AT ANY TIME, THE PROJECT SHOULD CEASE ALL ACTIVITIES INVOLVING SUBSURFACE DISTURBANCE IN THE IMMEDIATE VICINITY OF SUCH DISCOVERIES. THE APPLICANT/RECIPIENT, OR OTHER DESIGNEE, SHOULD CONTACT THE FLORIDA DEPARTMENT OF STATE, DIVISION OF HISTORICAL RESOURCES, THE STATE HISTORIC PRESERVATION OFFICER (SHPO) AND THE DSH/FEMA REGION IV ENVIRONMENTAL OFFICER AND FDEM STATE ENVIRONMENTAL LIAISON OFFICER FOR FURTHER GUIDANCE. PROJECT ACTIVITIES SHOULD NOT RESUME WITHOUT WERBAL AND/OR WRITTEN AUTHORIZATION FROM THE DIVISION OF HISTORICAL RESOURCES.
22. IN THE EVENT THAT UNMARKED HUMAN REMAINS ARE ENCOUNTERED DURING PERMITTED ACTIVITIES, ALL WORK MUST STOP IMMEDIATELY AND THE PROPER AUTHORITIES NOTIFIED IN ACCORDANCE WITH F.S. 872.05.
23. GROUNDWATER ELEVATIONS SHOWN IN THE PLANS REFLECT GROUNDWATER ELEVATIONS DURING TIME OF GEOTECHNICAL BORINGS ONLY. GROUNDWATER ELEVATIONS CAN FLUCTUATE UP OR DOWN.

UTILITY NOTES:

1. THE LOCATION SHOWN FOR EXISTING UNDERGROUND UTILITIES IS APPROXIMATE. THE CONTRACTOR SHALL DETERMINE THE EXACT LOCATION OF ALL EXISTING UTILITIES BEFORE COMMENCING WORK IN EACH AREA. THE CONTRACTOR AGREES TO BE COMPLETELY RESPONSIBLE FOR ALL DAMAGES WHICH MIGHT OCCUR BY HIS FAILURE TO EXACTLY LOCATE AND PRESERVE ALL UTILITIES.
2. UTILITY OWNERS SHALL BE NOTIFIED AT LEAST 48 HOURS PRIOR TO ANY CONSTRUCTION SO THAT THE UTILITY OWNER CAN SPOT VERIFY AND/OR EXPOSE THEIR UTILITIES. KNOWN UTILITIES OWNERS INCLUDE:

SEWER/WATER - EMERALD COAST UTILITY AUTHORITY
MR. MIKE HAMLIN
P.O. BOX 15311

ORLANDO, FL. 32809 PH: (800) 432-4770

3. AT&T FLORIDA WILL COMPLETE ALL WORK DURING THE HOURS OF 7:30 AM - 4:30 PM, MONDAY THRU FRIDAY. NO NIGHT OR WEEKEND WORK.
4. ALL CABLE DAMAGE MUST BE REPORTED TO THE ATT FLORIDA REPAIR SERVICE DEPARTMENT AT 611 FROM A LAND LINE OR 877-737-2478 IF USING A CELL PHONE.
5. CONTRACTOR IS TO USE CAUTION WHEN WORKING IN OR AROUND AREAS OF OVERHEAD TRANSMISSION LINES AND UNDERGROUND UTILITIES.
6. UTILITIES TO REMAIN AND BE PROTECTED DURING CONSTRUCTION. NECESSARY REPAIRS SHALL BE CONSIDERED INCIDENTAL TO OTHER PAY ITEMS AND SHALL BE TO THE SATISFACTION OF UTILITY OWNERS.

SURVEYOR NOTES

1. NORTH AND BEARINGS ARE GRID BASED ON THE NORTH AMERICAN DATUN 1983 AS SHOWN ON THE BASELINE OF SURVEY OF 61ST AVE. PER GPS CONTINUAL OPERATING REFERENCE STATION "PENSACOLA" PER THE STATE OF FLORIDA.
2. NO TITLE SEARCH WAS PERFORMED BY NOR FURNISHED TO MOTT MACDONALD FLORIDA LLC FOR THE PURPOSES OF THIS SURVEY SHOWN HEREON.
3. THE OPINION OF THE LOCATION AND EXTENT OF THE PROPERTY REPRESENTED & RIGHT OF WAYS BY THE SURVEY DOES NOT GUARANTEE TITLE TO NOR DETERMINE OWNERSHIP TO ANY PERSONS OR PARTY.
4. ALL UNDERGROUND UTILITIES SHOWN WERE LOCATED PER 811 DESIGN TICKETS 323606849, 323606909 & 323606963 AND THEIR PAINTED/FLAGGED LOCATIONS SURVEYED BY MOTT MACDONALD FIELD CREWS. SURVEYOR DOES GUARANTEE UNDERGROUND LOCATIONS. THERE MAY BE OTHER UNDERGROUND UTILITIES NOT SHOWN HEREON. SIZES AND DEPTHS ARE UNKNOWN.
5. ELEVATIONS ARE BASED ON THE NORTH AMERICAN VERTICAL DATUM 1988 AS SHOWN ON THIS SURVEY PER THE PROJECTED ELEVATION FROM GPS CONTINUAL REFERENCE STATION "PENSACOLA" PER THE STATE OF FLORIDA.
6. RIGHT OF WAYS AND PARCELS LINES ARE CALCULATED PER FIELD SURVEY OF SUBDIVISION MAPS, RIGHT OF WAY MAPS AND APPARENT MAINTENANCE.

SHEET 30

TEMPORARY TRAFFIC CONTROL NOTES:

1. THE CONTRACTOR SHALL PROVIDE AN APPROVED TRAFFIC CONTROL PLAN THAT ADHERES TO THE REQUIREMENTS OF THE FY 2017-18 FLORIDA DEPARTMENT OF TRANSPORTATION DESIGN STANDARDS INDEX SERIES 600.

2. THE TRAFFIC SHALL BE MAINTAINED IN ACCORDANCE WITH THE CURRENT FDOT "DESIGN STANDARDS" INDEX SERIES 600, SPECIFICALLY INDEX 600, 602, 603, 604, 605, 612, 613 AND 615 AND THE CURRENT MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES.

3. THE CONTRACTOR SHALL INSTALL ADVANCE CONSTRUCTION SIGNING PRIOR TO COMMENCEMENT OF ALL CONSTRUCTION OPERATIONS AND MAINTAIN SIGNING THROUGHOUT THE DURATION OF CONSTRUCTION.

4. ARROWS DENOTE DIRECTION OF TRAFFIC ONLY AND DO NOT REFLECT PAVEMENT MARKINGS, UNLESS OTHERWISE NOTED.

5. LANE CLOSURES WILL NOT BE PERMITTED DURING SPECIAL EVENTS, AND NO WORK WILL BE PERMITTED DURING HOLIDAYS AS CALLED FOR IN THE SPECIFICATIONS.
SPECIAL EVENT: BLUE ANGEL AIR SHOW AT NAVAL AIR STATION HELD DURING NOVEMBER OF EACH YEAR.

6. ALL LANES ON 61st AVE., LAKE JOANNE DR. & US 98 MUST BE REOPENED TO NORMAL TRAFFIC WITHIN 12 HOURS DURING AN EVACUATION NOTICE OF A HURRICANE OR ANY OTHER CATASTROPHIC EVENT AND SHALL REMAIN OPEN FOR THE DURATION OF THE EVACUATION OR EVENT AS DIRECTED BY THE PROJECT ENGINEER/ADMINISTRATOR.

7. EXISTING STREET AND ROAD NAME SIGNS ON THE PROJECT ARE TO BE TEMPORARILY RELOCATED DURING CONSTRUCTION AND KEPT VISIBLE AT ALL TIMES FOR THE FACILITATION OF ACCESS BY EMERGENCY VEHICLE TRAFFIC.

8. WORK ZONE SPEED LIMITS SHALL BE POSTED 20 MPH ON COUNTY ROADWAYS AND 35 MPH ON US 98.

9. THE CONTRACTOR SHALL NOT EXCAVATE ANY AREA LARGER THAN HE CAN BACKFILL OR RECONSTRUCT BY THE END OF THE SAME WORK PERIOD. NO DROPOFF REQUIRING THE USE OF A BARRIER WALL WILL BE ALLOWED TO REMAIN IN AN INACTIVE WORK ZONE. THE CONTRACTOR SHALL RESTORE DROPOFFS TO AN ACCEPTABLE GRADE USING AN APPROVED METHOD FROM INDEX 600.

10. PORTABLE CHANGEABLE MESSAGE SIGNS (PCMS) ARE TO BE PLACED AND RUNNING AT LEAST 7 DAYS PRIOR TO LANE AND/OR INTERSECTION CLOSURE.

11. THE CONTRACTOR SHALL MAINTAIN ACCESS TO LOCAL PROPERTIES DURING ROAD CLOSURE.

CONSTRUCTION SEQUENCE:

1. CLOSE S. 61ST AVE.

2. RELOCATE TRAFFIC SIGNAL ON US 98.

3. INSTALL PIPE ACROSS US 98 W/MOT.

4. INSTALL PIPE ON 61ST AVE.

5. RECONSTRUCT 61ST AVE.

6. INSTALL PIPE ON LAKE JOANNE DR.

7. RECONSTRUCT LAKE JOANNE DR.

8. OPEN S. 61ST AVE. TO TRAFFIC.

9. CONSTRUCT WEIR AND HEADWALL AT LAKE JOANNE CANAL.

MAST ARM TABLE OF VARIABLES

SCALE AS SHOWN

SHEET T003

350271 LakeCharlene T003 - MAST ARM TABLE OF VARIABLES 10/19/2017 4:14 PM

GENERAL NOTES

GOVERNING STANDARDS AND CONSTRUCTION SPECIFICATIONS:
1. FLORIDA DEPARTMENT OF TRANSPORTATION STANDARD SPECIFICATIONS FOR ROADS AND BRIDGE CONSTRUCTION, AS AMENDED BY CONTRACT DOCUMENTS (LATEST EDITION)
2. FDOT STRUCTURES MANUAL DATED JANUARY 2017
3. AMERICAN ASSOCIATION OF STATE HIGHWAY AND TRANSPORTATION OFFICIALS (AASHTO) LOAD AND RESISTANCE FACTOR (LRFD) BRIDGE DESIGN SPECIFICATIONS, [7TH], EDITION AND ALL SUBSEQUENT INTERIMS.

MATERIALS
1. ALL CONCRETE SHALL CONFORM WITH SECTION 346
2. UNIT WEIGHT OF CONCRETE (INCLUDING REINFORCING) = 150 LB/FT^3
3. CONCRETE SHALL BE CLASS II, CAST IN PLACE AND HAVE A MIN. 28-DAY COMPRESSIVE STRENGTH OF 3,400 PSI
4. PROVIDE ¾" CHAMFERS ON ALL EXPOSED EDGES EXCEPT AS OTHERWISE NOTED.
5. ALL REINFORCING STEEL SHALL BE ASTM A615, GRADE 60
6. MINIMUM CONCRETE COVER SHALL BE AS FOLLOWS UNLESS OTHERWISE SHOWN IN PLANS:
   WALL: 2"
   FOOTING: 2", EXCEPT CAST AGAINST EARTH: 3"

PLAN DIMENSIONS
1. ALL DIMENSIONS IN THESE PLANS ARE MEASURED IN FEET EITHER HORIZONTALLY OR VERTICALLY UNLESS OTHERWISE NOTED.
2. ENDWALL DIMENSIONS, LOCATIONS AND POSITIONS ARE FOR ROUND AND ELLIPTICAL CONCRETE PIPE. ROUND CONCRETE PIPE SHOWN.

UTILITIES
1. FOR LOCATIONS OF EXISTING UTILITIES, SEE CIVIL DRAWINGS AND UTILITY PLANS
   THE UTILITIES SHOWN IN THESE PLANS ARE AT APPROXIMATE LOCATIONS

SITE CONDITIONS
1. REVIEW ALL CONTRACT DOCUMENTS, DIMENSIONS AND SITE CONDITIONS AND COORDINATE WITH FIELD DIMENSIONS. REPORT ANY DISCREPANCIES IN WRITING TO THE ENGINEER OF RECORD. DO NOT CHANGE SIZE OR DIMENSIONS OF STRUCTURAL MEMBERS WITHOUT WRITTEN INSTRUCTIONS FROM THE ENGINEER OF RECORD.
2. ALL PORTIONS OF TREES AND MISCELLANEOUS DEBRIS WITHIN THE CHANNEL WITHIN THE R/W LIMITS SHALL BE REMOVED AND DISPOSED PROPERLY
3. FRONT SLOPE AND DITCH TRANSITIONS SHALL BE IN ACCORDANCE WITH INDEX NO. 280
4. ON OUTFALL DITCHES WITH SIDE SLOPES FLATTER THAN 1:1½ PROVIDE 20' TRANSITIONS FROM THE ENDWALL TO THE FLATTER SIDE SLOPES, RIGHT OF WAY PERMITTING
5. DEWATERING WILL BE NEEDED TO INSTALL THE FOUNDATIONS. REFER TO GEOTECHNICAL REPORT FROM LARRY M JACOBS, FILE # 16-251, DATED JANUARY 13, 2017 FOR HEADWALL FOUNDATION AND SHEET PILE RECOMMENDATIONS.
6. IF DEWATERING IS NOT PAID FOR IN A PAY ITEM, DEWATERING COST SHALL BE INCIDENTAL TO THE COST OF THE ITEM TO BE INSTALLED.

SHEET PILE WALL AND RIPRAP PLAN

SCALE : 1/4" = 1'

NOTES:

1. WARNING: WORK FOR THIS SITE IS BEING PERFORMED NEAR A GAS LINE
2. WORK THIS SHEET WITH S007 AND S008.
3. SHEET PILES SHALL BE FIBER REINFORCED PLASTIC (FRP). REFER TO SHEET S008 FOR REQUIRED FRP SHEET PILE PROPERTIES AND SECTIONS.
4. EXISTING WALL PLANKS/WALES THAT ARE NO LONGER REQUIRED SHALL BE REMOVED.
5. ADJUST ELEVATIONS AS REQUIRED TO MATCH SITE CONDITIONS. DO NOT EXCEED EXPOSED WALL HEIGHTS SHOWN
6. PLACE RIPRAP AND BEDDING STONE CAREFULLY ADJACENT TO SHEET PILES TO PREVENT DAMAGE.
7. BACKFILL SHALL BE A COHESIONLESS MATERIAL MEETING SPECIFICATIONS AND SHALL BE PLACED IN 12" MAX LIFTS AND COMPACTED TO 90 MODIFIED PROCTOR OR BETTER.
8. COMPACTION WITHIN 3'-0" OF THE SHEET PILE WALL FACE SHOULD BE ACHIEVED USING A PLATE TAMPER WITH A MINIMUM WEIGHT OF 300 LBS.
9. CONTRACTOR SHALL COORDINATE COMPONENTS FOR A COMPLETE SHEET PILE SYSTEM INCLUDING CAPS, WALES, ANCHORS, CORNERS, AND MISCELLANEOUS CONNECTIONS TO MATCH THE MINIMUM SHEET PILE SIZE INDICATED IN THE PLANS. ALL ITEMS NECESSARY TO PROVIDE A COMPLETE WALL SYSTEM ARE INCIDENTAL TO THE COST OF THE SHEET PILES.
10. WALL CAPS SHALL BE A FRP SHAPE DESIGNED BY THE MANUFACTURER FOR USE ON THE SELECTED PILE SHAPE. INSTALL ACCORDING TO MANUFACTURER'S WRITTEN INSTRUCTIONS.
11. INSTALL SHEETS ALONG STRAIGHT LINES WITH AN ALLOWABLE HORIZONTAL TOLERANCE OF 1" WITHIN 10'
12. WALES AND TIE-BACKS ARE NOT REQUIRED FOR THESE WALLS FOR STRENGTH OR DEFLECTION, BUT MAY BE REQUIRED TO MEET HORIZONTAL INSTALLATION TOLERANCE. IF USED, WALES SHALL BE A FRP MATERIAL DESIGNED BY THE MANUFACTURER FOR USE ON THE SELECTED PILE SHAPE
13. BENT PLATE SHALL BE ASTM A36 GALVANIZED.
14. EXPANSION BOLTS SHALL BE 3/4" DIA STAINLESS STEEL SUCH AS HILTI KWIK BOLT 3 SS 304.
15. CUT EXISTING SHEET PILE WALLS AT THE INTERFACE WITH NEW WALLS AND ATTACH TO THE NEW WALLS USING MATERIALS MATCHING EITHER THE EXISTING OR NEW WALLS. USE FILTER FABRIC ALONG THE INTERFACE. DETAILS OF THE ATTACHMENT TO BE SUBMITTED FOR REVIEW PRIOR TO IMPLEMENTATION. COSTS OF THE CONNECT ARE INCIDENTAL TO THE SHEET PILES.
16. CONTRACTOR SHALL VERIFY ALL DIMENSIONS, ELEVATIONS AND ANGLES SHOWN FOR EXISTING ITEMS THAT AFFECT CONSTRUCTION PRIOR TO STARTING CONSTRUCTION.
17. THE CONTRACTOR SHALL BE RESPONSIBLE FOR IDENTIFYING BURIED AND OVERHEAD UTILITIES PRIOR TO SHEET PILE INSTALLATION AND SHALL COORDINATE WITH UTILITY COMPANIES TO SUPPORT UTILITIES AS REQUIRED
18. FOR LOCATIONS OF EXISTING UTILITIES, REFER TO CIVIL PLANS.
19. THE UTILITIES SHOWN IN THE WALL PLANS ARE AT APPROXIMATE LOCATIONS.
20. REFER TO SHEET S008 FOR SECTION B-B AND SHEET PILE ELEVATIONS AND DETAILS.
21. REFER TO SHEET S007 FOR SECTIONS A-A AND B-B FOR RIPRAP INFORMATION.
22. SHEET PILE INSTALLATION IS NOT ALLOWED FROM 7:00 P.M. TO 7:00 A.M.

Description : Lake Charlene Drainage Improvements

Comment No.	Sheet No.	Comment	Response	Designer Will Incorporate		
				YES	NO	Other
Terri Berry Comments dated March 16, 2017						
1		Verify scales on all design sheets. Some do not appear to be correct.	Agree. Designer will incorporate. It appears that the scales on cross section sheet 26 and traffic control sheet 28 are incorrect.	X		
2		Round up quantities on summary of pay items.	Designer will incorporate where this makes sense. Some quantities will need to be exact. We suggest taking a look at the final quantities before bidding to make this determination.			Discuss
3		Show lateral patch on drawings	Lateral patch detail is shown on Sheet 5 “Trench Cuts and Restorations across Roadways Per FDOT Index 307”.			N/A
4		Verify pipe depth. My measurements indicate 13-14ft depth.	Verified. Note that the pipe depth varies as shown in the Plan & Profile sheets. The deepest location is crossing US 98 at approximately 15’ deep.			N/A
5		Show details for pay item 26 Special concrete weir structure for triple end wall.	Designer will incorporate. These details were intended to be shown in the next submittal with the structural design.	X		
6		Couldn’t find well point or unsuitable in pay items. Geotechnical report calls out both. Please add to bid tab.	Well point is a dewatering mean/method which is dictated by the Contractor per pay item notes 5 & 6. We can add this method to the pay item note as “including but not limited to well point” if that is the preference. Unsuitable material is covered in pipe pay item notes.			Discuss
7		Add remove/replace label for each driveway with quantity.	Agree. Designer will incorporate. Removal quantity is included in clearing and grubbing per pay item note.	X		
8		Add county specification for driveways.	Driveway grades are shown in the cross sections. County Standard construction notes were added to Typical Section Sheet.	X		
9		Will there be any night work? If so add a pay item.	Based on the lane closure analysis we performed, there should be no restrictions which require night work.			N/A
10		If variable message boards will be needed, add pay item.	PCMS “portable changeable message sign” is included in the lump sum MOT pay item per pay item notes.			N/A
11		Have you applied for environmental permits? If not, please apply and let me know the date.	Environmental permits will be applied for once the design details and stormwater modeling report are finalized. – Update: Environmental permits received from FDEP & USACE.	X		
12		Have you sent drawings to utilities? Please copy me on the email you send to utilities. I will be scheduling a utility walk-thru.	Drawings sent to all utility owners. Utility walkthrough scheduled for 3/30.	X		
13		Any adverse affects to Jones Creek with new design?	Minor stage increases in Jones Creek are expected at specific locations. Stormwater Modeling Report by Mott MacDonald will describe these locations.			N/A

Date of Response: March 2017

FPN: N/A – Escambia County
Description : Lake Charlene Drainage Improvements

Comment No.	Sheet No.	Comment	Response	Designer Will Incorporate		
				YES	NO	Other
14		Sheet 4 has note about vegetated rolled erosion control products. Add line item to bid tab.	Agree. Designer will incorporate. The notes were incorrect and will be removed.	X		
15		Please submit electronic copy of survey.	Electronic copy of survey was submitted to Danny Swain on 1/14/17.			N/A
16		Do you have any demolition sheets?	No. Demolition sheets are typically not included for infrastructure projects. Items to be removed or reconstructed are called out as such.			N/A
17		Sheet 9 has pipe instead or RCP for 60” pipe	Agree. Designer will incorporate correction.	X		
18		Sheet 11 has note to begin type B curb & gutter on south side but not on the north side.	North side callout is included on Sheet 12.			N/A
19		Some of your notes for Const 60” pipe have lengths and locations others do not.	To avoid contractor confusion, it is standard that the pipe length callout is only included in one callout location if a pipe breaks across to another plan sheet. The secondary sheet would only call out to construct pipe with no length callout.			N/A
20		Sheet 12 – has pipe instead of RCP on one of the Const 60” pipe notes.	Agree. Designer will incorporate correction.	X		
21		Sheet 12 – what are you doing with the driveways? If replacing add note with quantity.	Agree. Designer will incorporate.	X		
22		Add detail drawings showing sheet pile.	Agree. Designer will incorporate in next submittal as part of the structural plans.	X		
23		Sheet 13 – is it possible to move headwall into ROW? Or just the portion with the new 60” pipes into ROW.	This is possible but would move a dropoff hazard close to the travel way. Areas outside the right of way would still need to be accessed and graded to construct a connection to the existing channel.			N/A
24		Do you plan on leaving the sluice gate?	No. The sluice gate restricts flow and causes the starting water surface elevation in the lake to be too high in our stormwater models. Manual control is not recommended.			N/A
25		Add drawing showing how existing pipe will be connected to S-200.	Agree. Designer will incorporate in next submittal as part of the structural plans.	X		
26		Where is S-200 detail?	Designer will incorporate S-200 detail in next submittal as part of the structural plans.	X		
27		Sheet 13 – Add label for S-201 for clarity.	Agree. Designer will incorporate.	X

Date of Response: March 2017

FPN: N/A – Escambia County
Description : Lake Charlene Drainage Improvements

Comment No.	Sheet No.	Comment	Response	Designer Will Incorporate		
				YES	NO	Other
28		Sheet 13 – is there a way to design in an access ramp for maintenance?	Maintenance will have to be performed from the edges of the channel since the channel will be surrounded by sheet pile walls or concrete endwalls. The width of the weir structure was set at 30" to provide a maintainable space in the structure.		X	
29		Add misc. concrete in pay items.	If misc. concrete is required for some reason, it is suggested to added additional quantity to the concrete driveway pay item to cover. Otherwise there is no documented use.			Discuss
30		Add note due to water table collars will need to be poured for all connections.	This would be a tremendous expense for 60" concrete pipe. Please clarify.			Discuss
31		Consider adding water valve adjustments to bid tab.	Valve adjustments in the project limits are not expected.			N/A
32		Is there a way to identify HWY 98 better on the drawings?	Agree. Designer will incorporate.	X		
33		Sheet 8 add invert information for inlet at station 33+60 west side.	Existing Invert is shown as gray survey label.			N/A
34		Sheet 8 do you need to label inlet at 32+60 west side?	This is an AT&T remote terminal box/pad.			N/A
35		Showing flow lines on inlets would be helpful.	Please clarify "on inlets". Flow arrows are shown for proposed pipe in cross sections.			Discuss
36		S-101 Do you need the pipe connection on the East side or can we remove the connection by vacating the pipe or removing the pipe and sealing the existing east structure?	H&H modeling leaves all connections to existing structures in place in order to evenly spread the flow into the outfall system. Design intent also seeks to avoid work on shoulders where utilities are located where possible.			N/A
37		S-102 is the existing pipe the same elevation? What is the plan to handle the water? Does the east pipe need to flow into the existing pipe and the western pipes flow into the new one?	H&H modeling leaves all connections to existing structures in place in order to evenly spread the flow into the outfall system.			N/A
38		S-103 existing 15" should be replaced with 18". Do you need the pipe connection on the East side or can we remove the connection by vacating the pipe or removing the pipe and sealing the existing east structure?	H&H modeling leaves all connections to existing structures in place in order to evenly spread the flow into the outfall system. Design intent also seeks to avoid work on shoulders where utilities are located where possible.		X	
39		Sta 52+00 – Can you add quantities to resurface entire area up to the fence.	Reconstruction assumes entire pavement boundaries up to the fence.			N/A
40		Sta 52+00 – found 12" pipe going under the road that isn't shown on drawings. Please add pipe and plans to handle it.	Agree. Designer will incorporate.	X		
41		If a crane is needed to set structures there are some power lines we may have to deal with.	Agree. The site was reviewed with Gulf Power who believes that there should be enough clearance.			N/A

				YES	NO	Other
42		AT&T has flags for fiber cable at sta 28+88 -30+00. Please shown on drawings.	Agree. Designer will incorporate.	X		
43		S-201 Verify all angles will work. We may be pushing the maximum.	Angles work. This is the reason for the skewed structure.	X		
44		Will forward traffic comments when received.	Noted. Traffic Comments will be added to the comment/response sheet.			N/A
Robert Peterson Comments dated March 15, 2017						
		Signalization plans not included for review, only vague pay items that are not usable for constructability. Please provide full signalization plans at next revision submittal.	Agree. Designer will incorporate signal details in to next deliverable, including structure design.	X		
Mike Embich Comments dated March 15, 2017						
		Consider adding a note to coordinate with the Navy Hospital to keep the back gate to the hospital closed during the construction.	Agree. 61st Avenue will have limited access during construction which will require contractor coordination during construction.	X		
Tim Day / Brent Wipf Comments dated March 24, 2017						
1		The project is expected to lower the lake level and surrounding water table by approximately 18 inches. Has the likely extent of the associated cone of depression been determined? If so, will the project affect the hydrology of any existing jurisdictional wetland areas? Can the project be modified to mitigate any expected impacts to jurisdictional wetlands?	The geotech report indicates slow horizontal movement of groundwater toward Lake Charlene, which is already acting as a drain to the vicinity. Groundwater elevations in the vicinity are not expected to lower to the same level as the lake. Lowering the lake level is expected to have minor impacts, if any, to the nearest wetlands to the west. It should be noted that the existing sluice gate keeps water artificially high. Update: The lake level will only be lowered 9 inches after further coordination and modeling.			N/A
2		What is the expected change in peek discharge (for a given design storm such as 25-year or 100-year, 24 hour event) from the Highway 98 outfall? If an increase in peek discharge is expected, has the impact on stream bank stability downstream been evaluated? If so, how was it evaluated, and what were the findings? Can the project be modified to mitigate any expected increase in energy?	Minor peak stage increases in Jones Creek are expected at specific locations. Stormwater Modeling Report by Mott MacDonald will describe these locations. Impact on stream bank stability was not specifically evaluated but is expected to be minor on stream banks considering the minimal peak stage increase.			Discuss

6		What is the source of runoff captured by the existing stormwater collection system on the east side of 61st Avenue north of station 39+00? Does a significant amount of stormwater from Corry Station enter this system? If so, would the construction of additional stormwater facilities, or the removal of certain existing impervious surfaces on Corry Station significantly benefit the project? If so, has the county attempted to coordinate these improvements with the Navy?	The source is the areas immediately east of 61st Avenue. Studies were performed for the project in the past which recommended stormwater management pond options in this area to help reduce the stages in Lake Charlene. We ran similar modeling options during the iterations for this project. There are a couple of issues: 1) Using Navy property as a stormwater management option does not provide a significant benefit because the land is a few feet higher than the Lake Charlene. Additionally, the water table in this area is very near the water surface elevation of Lake Charlene. What this would mean is constructing a pond several feet deep over a very large area that would only hold less than a foot of stormwater above the water table. The option was not feasible. 2) Better managing stormwater to the east of 61st Avenue on Navy property would not substantially benefit the flooding in the Lake Charlene area because it does not contribute runoff to the Lake Charlene area.
