## ADDENDUM NUMBER 1:

Re: Bristol Park Demolition Specification Number: PD 16-17.032

Proposers:

We recently sent you a Request for Proposal on the above mentioned specification.

This Addendum #1 provides for:

### **Clarifications**

Estimate for demolition of all 27 homes is \$805,630.00.

### **Revisions**

- 1. The purpose of this addendum is to add additional demolition sites. Contractors will provide their competitive bid to demolish and remove all improvements for these additional properties within the Bristol Park, Bristol Creek, and Ashbury Hills neighborhood. Improved elements are to include, but not be limited to: primary structures, outbuildings and accessory units, fences, sidewalks and driveways, utilities, underground appurtenances such as pools and basements, tanks, and any other non-vegetative improvements on the property. New sites listed in *Table 1*, in addition to others of similar nature, shall be returned to a graded, stabilized condition that is properly leveled and sodded to encourage vegetative growth. Refer to *Table 1* for property specifications known by Escambia County as of the date of this invitation to bid. All activities performed under the resultant contract shall be completed in accordance with applicable federal, state and local laws, regulations, policies, and procedures. Demolition may not proceed for some sites if they do not close with the County.
- 2. This addendum includes Boundary Surveys in Appendix A, Hazardous Materials Survey Reports in Appendix B, and Property Appraisal in Appendix C for the additional demolition sites.

### 3. A replacement bid tab form is included in this addendum.

### **SOLICITATION**

MAILING DATE: Monday, April 10, 2017

**PRE-BID CONFERENCE:** A Mandatory Pre Bid Conference will be held on Wendnesday, April 19, 2017 at 1:30 p.m. CDT, held at the Office of Purchasing, Conference Room 11.407 213 Palafox Place, 2<sup>nd</sup> Floor Matt Langley Bell III Building, Pensacola, Florida 32502. Bids received from any firm(s) not attending a mandatory pre-solicitation conference will be returned unopened. ALL BIDDERS MUST ATTEND. OFFERS RECEIVED FROM BIDDERS NOT IN ATTENDANCE WILL NOT BE ACCEPTED. OFFERS WILL BE RECEIVED UNTIL: 2:00 p.m., CDT, WEDNESDAY, May 10, 2017 and may not be withdrawn within <u>90</u> days after such date and time.

POSTING OF SOLICITATION TABULATIONS

Solicitation tabulations with recommended awards will be posted for review by interested parties at the County Office of Purchasing and will remain posted for a period of two (2) business days. Failure to file a protest in writing within two (2) business days after posting of the solicitation tabulation shall constitute a waiver of any protest relating to this solicitation. All protests must be filed with the Office of Purchasing. They will be handled according to the Escambia County Purchasing Ordinance.

County Permits/Fees required for this project:

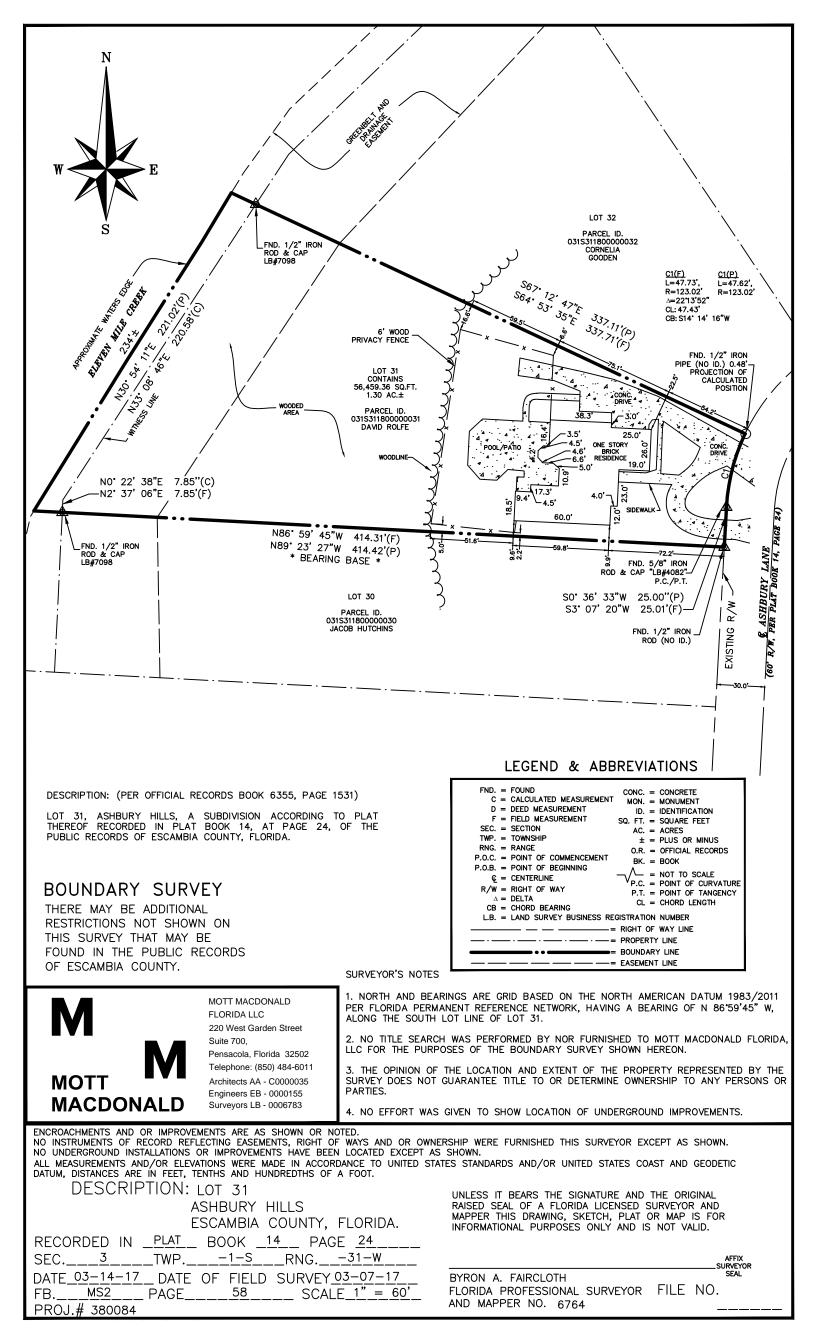

PermitCostDemolition\$100.00 Each Residence

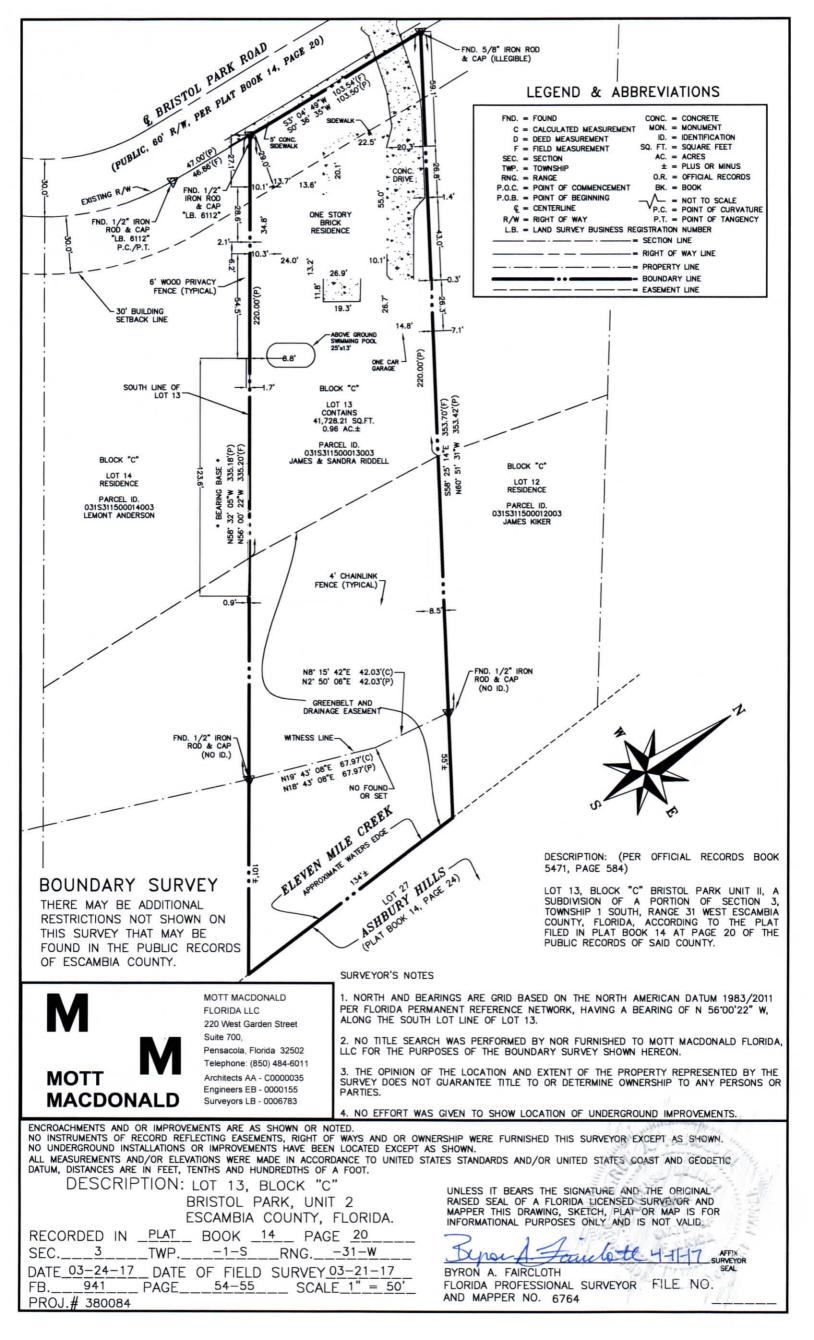

Attached to bid you shall find a bid bond, cashier's check or certified check (circle one that applies) in the amount of (5%) of bid.

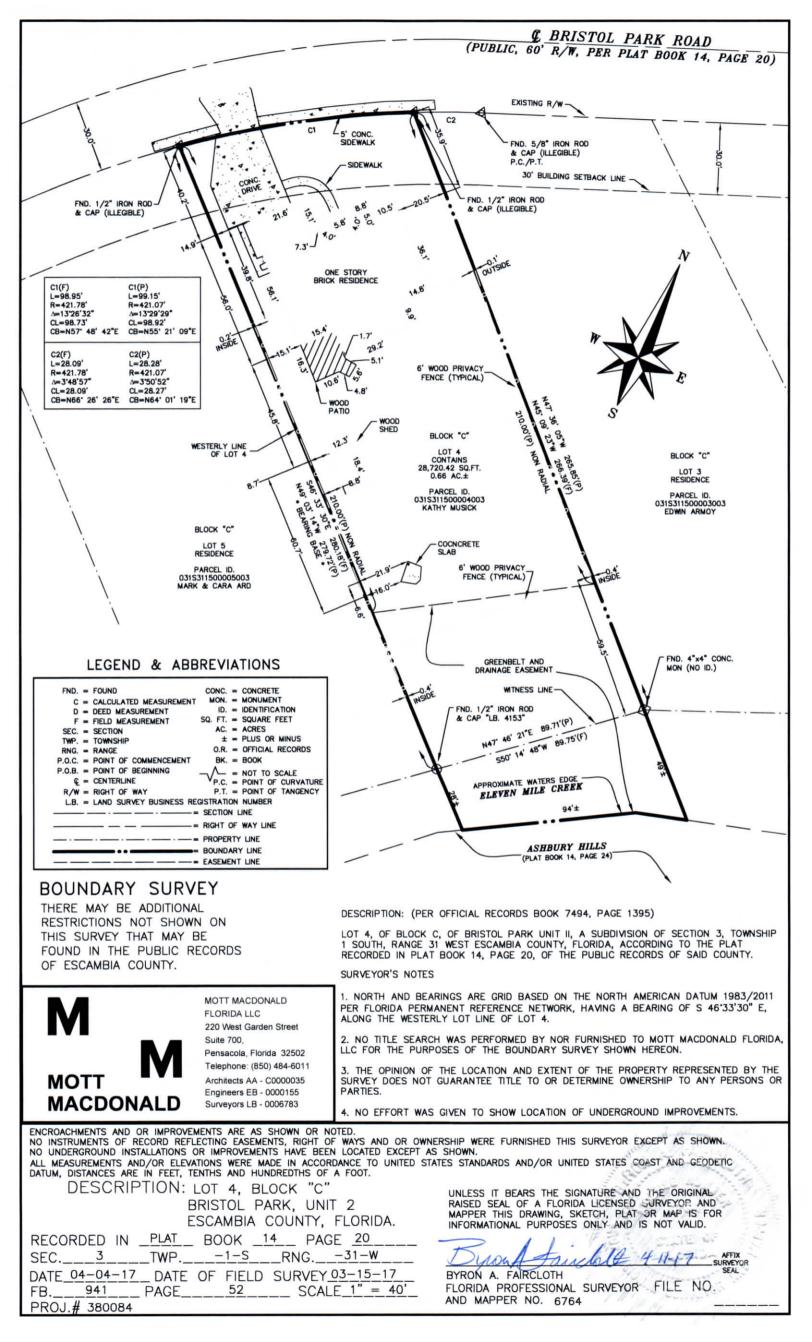

The work shall be substantially completed within **thirty (30)** calendar days from the Commencement Date. The Bidder agrees to fully complete all work included above within **sixty (60)** consecutive calendar days from the date of Notice to Proceed. Liquidated damages of **\$1000** each day will be assessed for each day that completion of the project is delayed. All work to be accomplished under this bid shall be the responsibility of Bidder and failure of subcontractors to perform shall not relieve Bidder of any liquidated damages. A Bid Bond in the amount of 5% of base bid is to be furnished by each Bidder. Bidder further acknowledges that all of the work outlined above may not be required at the discretion of Escambia County. The total will be subject to total funds available during the course of the work. However, it is the intent of Escambia County at this time to substantially complete the listed work.

Attention: Mr. Keith Johnson

Subject: Report of Pre-Demolition Asbestos Containing Materials Survey ROLFE RESIDENCE 3018 Ashbury Lane Cantonment, Escambia County, Florida NOVA Project Number 10116-8317003.000

Dear Mr. Johnson:

**NOVA Engineering and Environmental LLC (NOVA)** has completed the Pre-Demolition Asbestos Containing Materials (ACMs) Survey for the house and associated buildings of the Rolfe residence located at 3018 Ashbury Lane, Cantonment, Escambia County, Florida (Subject Property). We appreciate your selection of NOVA and for the opportunity to be of service on this project. Please feel free to contact us if you have any questions or if we may be of further assistance.

Sincerely, NOVA Engineering and Environmental LLC

Mark Bottorff Accredited Asbestos Inspector

the

Lawrence G. Schmaltz, PE, FLAC Florida Asbestos Consultant (AX09)

### LIST OF APPENDICES

APPENDIX A – ACM LABORATORY ANALYTICAL DATA APPENDIX B – CERTIFICATIONS

# 1.0 SUMMARY

A brief summary of our findings is presented below. This summary is provided for convenience and should not be substituted for review of the full report, including all attachments as provided herein.

# 1.1 ASBESTOS

During this study, twenty (20) samples (containing 26 total layers) of joint compound, wallboard, popcorn ceiling material, caulking materials, grout and roofing materials were sampled by NOVA and analyzed by Arrowhead Technologies, LLC. using Polarized Light Microscopy (PLM), with zero (0) of the analyzed sample layers indicating asbestos containing materials (ACM).

Polarized Light Microscopy (PLM) is inexpensive, but it can identify non-asbestos fibers as asbestos. If the PLM analytical results indicate levels between "trace" (<1%) and 1% asbestos, the samples must be analyzed by point count methodology to better quantify the actual asbestos content. Also, in an effort to eliminate false positives (and costly unnecessary abatement), samples reported as containing between 1% and 10% asbestos can be analyzed/verified by point count. The alternative is to assume the subject material to be asbestos containing.

The Occupational Safety and Health Administration (OSHA) Asbestos Standard for Construction Industry 29 CFR 1926.1101 regulates workplace exposure to asbestos. OSHA does not define Asbestos Containing Material on asbestos content. Any detectable asbestos, even if <1%, makes it asbestos for purposes of complying with OSHA regulations to determine worker exposure. The OSHA standard requires that employee exposure to airborne asbestos fibers be maintained below 0.1 asbestos fibers per cubic centimeter of air (0.1 f/cc). The OSHA standard classifies construction and maintenance activities, which could disturb ACM, and specifies work practices and precautions which employers must follow when engaging in each class of regulated work. In addition to worker protection, the mean and methods necessary for ACM abatement are the sole responsibility of the abatement contractor.

A complete list of suspected ACM samples obtained is shown in the laboratory report (included in Appendix A).

# 2.0 INTRODUCTION

# 2.1 DESCRIPTION OF SUBJECT PROPERTY

The Subject Property includes the house and storage building of the Rolfe Residence located at 3018 Ashbury Lane in Cantonment, Escambia County, Florida (Subject Property). Specifically, for the purposes of this survey, the Subject Property surveyed includes the house and buildings associated with the residence. The Riddell Residence includes an approximately 4,800-square foot, two (2) story (including sub floors) concrete slab, wood framed residential building originally constructed in 1994 with renovations in 2014. According to the Escambia County Geographical Information System (GIS) database, the Subject Property is located on an approximately 1.37-acre parcel of land and is identified as Parcel Ref 03-1S-31-1800-000-031.

## 2.2 PURPOSE

As requested by Wetland Sciences, Inc. (CLIENT), the Pre-Demolition Asbestos Containing Materials (ACMs) Survey was performed in an effort to identify ACMs at the Subject Property. This work has been performed in general accordance with NOVA Proposal Number 016-30178439 dated January 20, 2017, applicable state and federal regulations, and routine industry practice.

ACM sampling was performed in general accordance with the Asbestos Hazard Emergency Response Act (AHERA) guidelines and ASTM E2356-10,"*Standard Practice for Comprehensive Building Asbestos Survey*" as a Baseline Survey. Deviations from the Baseline Survey protocols include:

No Deviations

We understand that the CLIENT does not intend to seek funding from the Department of Housing and Urban Development (HUD), Federal Housing Administration (FHA), Fannie May, Freddie Mac or the Florida State Housing Authority. In addition, the CLIENT does not anticipate that any portion of the Subject Property will be used as a school or day care facility.

# 2.3 LIMITATIONS

NOVA has performed the Pre-Demolition Asbestos Containing Materials Survey, which is a <u>limited</u> inquiry into a property's environmental status and is not sufficient to discover every potential source of ACMs at the property to be evaluated. No survey can wholly eliminate uncertainty regarding the potential ACMs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for ACMs in connection with a property.

The level of inquiry is variable. Not every property will warrant the same level of assessment for ACMs. Consistent with good commercial or customary practices, the appropriate level of assessment will be guided by the type of property subject to assessment, the intended use of the property, the expertise and risk tolerance of the CLIENT, and the information developed in the course of the assessment.

NOVA's findings, opinions, conclusions and recommendations are based on information obtained through visual assessment of surficial conditions in readily accessible areas. It is possible that additional ACMs exist or may subsequently become known that may impact or change the assessment after NOVA's services are complete.

NOVA's assessment represents our professional opinion, only. Therefore, NOVA cannot, under any circumstances, make a statement of warranty or guarantee, expressed or implied, that ACMs are limited to those that are discovered while we are performing the Survey.

# 2.4 USER RELIANCE

NOVA's Pre-Demolition Asbestos Containing Materials Survey, along with the findings and conclusions contained in the report, either in completed form, summary form, or by extraction, is prepared, and intended, for the sole use of Wetland Sciences, Inc. (CLIENT) and therefore may not contain sufficient information for other purposes or parties. The CLIENT is the only intended beneficiary of this report. The contents of NOVA's report will continue to be the property of NOVA. NOVA's report may not be disclosed to, used by, or relied upon by, any person or entity other than the CLIENT without the express written consent of NOVA.

Authorization for disclosure to a third party or authorization for third-party reliance on a final report of any report will be considered by NOVA upon the written request of the CLIENT. NOVA reserves the right to deny authorization to allow disclosure or reliance of NOVA's report to third parties.

# 3.0 ASBESTOS CONTAINING MATERIALS

# 3.1 FIELD AND LABORATORY SERVICES

Mark Bottorff, a NOVA professional and federal and state certified asbestos inspector, performed the field work for the Pre-Demolition Asbestos Containing Materials Survey for the Subject Property on March 29, 2017.

### 3.1.1 ASBESTOS CONTAINING MATERIALS SAMPLING

The building areas were visually assessed by NOVA to identify suspect ACMs, which were then grouped into three categories according to their intended use:

- **Surfacing Materials** such as sprayed-on or troweled fireproofing, acoustical and decorative insulation, textured "popcorn" finishes, paint, stucco, etc.
- **Thermal System Insulation** (TSI), such as pipe, boiler and storage tank insulation, and insulation on ducts, pumps, heat exchangers, and other equipment.
- **Miscellaneous Materials**, such as floor and ceiling tiles, wallboard, asbestoscement board, siding and other building materials that did not fall into one of the previously mentioned categories.

Where applicable, materials with similar texture, color and general appearance were considered homogeneous for sampling purposes, including visually similar materials on different floors. NOVA's assessment also included touching representative samples to determine friability, a mechanical classification defined as whether a material can be crumbled, pulverized, or reduced to powder by hand pressure.

Bulk samples were subsequently obtained in general accordance with the AHERA (40 CFR 763.86, Sampling) and ASTM E2356-10 procedures. The samples were placed in appropriate containers, and the containers sealed and labeled with a unique identification number. The samples were subsequently transported (following routine industry practices and chain-of-custody procedures) to Arrowhead Technologies, LLC for analysis. Arrowhead Technologies is a United States Department of Commerce National Institute of Standards and Technologies NVLAP Certified Laboratory (See Appendix B).

The ACM samples were analyzed for asbestos using Polarized Light Microscopy (PLM) methods in accordance with EPA Method 600/R-93/116. Copies of the complete asbestos laboratory report and chain-of custody are included in Appendix A.

# 3.2 ASBESTOS

During this study, twenty (20) samples (containing 26 total layers) of joint compound, wallboard, popcorn ceiling material, caulking materials, grout and roofing materials were sampled by NOVA and analyzed by Arrowhead Technologies, LLC. using Polarized Light Microscopy (PLM), with zero (0) of the analyzed sample layers indicating asbestos containing materials (ACM).

Below is a summary of ACM identified at the Subject Property:

### No ACM's were identified at the Subject Property.

The Occupational Safety and Health Administration (OSHA) Asbestos Standard for Construction Industry 29 CFR 1926.1101 regulates workplace exposure to asbestos. OSHA does not define Asbestos Containing Material on asbestos content. Any detectable asbestos, even if <1%, makes it asbestos for purposes of complying with OSHA regulations to determine worker exposure. The OSHA standard requires that employee exposure to airborne asbestos fibers be maintained below 0.1 asbestos fibers per cubic centimeter of air (0.1 f/cc). The OSHA standard classifies construction and maintenance activities, which could disturb ACM, and specifies work practices and precautions which employers must follow when engaging in each class of regulated work. In addition to worker protection, the mean and methods necessary for ACM abatement are the sole responsibility of the abatement contractor.

A complete list of suspected ACM samples obtained is shown in the laboratory report (included in Appendix A).

# 3.3 ASBESTOS ABATEMENT

Any component, which is similar in appearance to, and is in the general vicinity or similar application of samples identified as containing asbestos, as well as any other materials not shown by proper sampling and analysis to be non-asbestos containing, should be handled as asbestos-containing material (ACM). As previously noted, determination of the actual quantities of ACMs at all locations should be made by the contractor during a site inspection prior to beginning abatement.

ACMs should be abated (removed) prior to disturbance by maintenance, renovation and/or demolition by a licensed asbestos abatement contractor and disposed at an approved solid waste disposal facility.

Abatement is highly regulated and consists of several parts. In addition to the demolition/renovation permit, a ten (10) day advance notification to the Florida Environmental Protection Division (FL-EPD) is required.

During abatement, third party monitoring is recommended to review if the asbestos is adequately managed and contained during the abatement process and to document clearance and re-occupancy criteria established for the project.

Most Clients also request an abatement management report. This report compiles pertinent data regarding the personnel, abatement, and asbestos disposal for liability management after the fact should there be concerns later from workers or others. The ten (10) day notice, abatement, third party oversight, and management report are not included with the authorized scope of work for this project, but we can provide these supplemental services, if desired.

Materials having results of analysis of less than 1% asbestos are considered to be nonasbestos containing materials and do not have to be treated as asbestos in the work place. However, if disturbed by renovation or demolition, prudent care should be observed regarding worker exposure to materials containing asbestos even if less than 1%.

Polarized Light Microscopy (PLM) is inexpensive, but it can identify non-asbestos fibers as asbestos. If the PLM analytical results indicate levels between "trace" (<1%) and 1% asbestos, the samples must be analyzed by point count methodology to better quantify the actual asbestos content. Also, in an effort to eliminate false positives (and costly unnecessary abatement), samples reported as containing between 1% and 10% asbestos can be analyzed/verified by point count. The alternative is to assume the subject material to be asbestos containing.

The Occupational Safety and Health Administration (OSHA) Asbestos Standard for Construction Industry 29 CFR 1926.1101 regulates workplace exposure to asbestos. OSHA does not define Asbestos Containing Material on asbestos content. Any detectable asbestos, even if <1%, makes it asbestos for purposes of complying with OSHA regulations to determine worker exposure. The OSHA standard requires that employee exposure to airborne asbestos fibers be maintained below 0.1 asbestos fibers per cubic centimeter of air (0.1 f/cc). The OSHA standard classifies construction and maintenance activities, which could disturb ACM, and specifies work practices and precautions which employers must follow when engaging in each class of regulated work. In addition to worker protection, the mean and methods necessary for ACM abatement are the sole responsibility of the abatement contractor.

Please note that the means and methods necessary for ACM abatement, as well as worker protection and monitoring, are the sole responsibility of the abatement contractor.

#### SCOPE OF THIS REPORT

These samples were obtained as a part of a building survey; this report is only intended to be used as a part of the survey report issued by the surveyor. This report explains the laboratory analysis and results. The surveyor's report explains the sampling protocol used, when the samples were obtained, the location(s) of the samples, where the materials were observed in the building, quantities of materials observed, condition of the materials and the extent of his/her survey. Sample locations and material descriptions are given by the surveyor on the chain of custody but included here (possibly abbreviated) only as a convenience for the reader.

This report may not be reproduced without written permission of Arrowhead and must be reproduced in full.

#### STATEMENT OF LABORATORY ACCREDITATION

The samples were analyzed in general accordance with the procedures outlined in the Method for the Determination of Asbestos in Bulk Building Materials, EPA/600/R-93/116, and the Interim Method for the Determination of Asbestos in Bulk Insulation Samples, EPA 600/M4-82-020. The results of each bulk sample relate only to the material tested and the results shall not be used to claim product endorsement by NVLAP or any agency of the U.S. Government.

Floor tile and other resinously bound materials, when analyzed by the EPA method, may yield false negative results because of limitations in separating closely bound fibers and in detecting fibers of small length and diameter. When a definitive result is required, Arrowhead recommends utilizing alternative methods of identification, including Transmission Electron Microscopy.

Specific questions concerning bulk sample results shall be directed to the Laboratory Director.

Mr. Keith Johnson Wetland Sciences, Inc. 3308 Gulf Beach Hwy Pensacola, Florida 32507

Subject: LEAD-BASED PAINT INSPECTION REPORT Group 1 Houses – Rolfe Residence 3018 Ashbury Lane Cantonment, Florida NOVA Project No. 10116-8317003.000

Dear Mr. Johnson:

**NOVA Engineering and Environmental, LLC(NOVA)** is pleased to present this Lead-Based Paint (LBP) Inspection Report to **Wetland Sciences, Inc.** (the Client) for the services completed at the above-referenced property (the "Property"). The scope of work completed at the Property and described herein was conducted in general accordance with the authorization from the Client.

#### PROJECT SUMMARY

On March 29, 2017, NOVA staff completed a LBP survey of the residential property located at 3018 Ashbury Lane in Cantonment, Florida. Testing was completed by Mr. Mark Bottorff, a United States Environmental Protection Agency (USEPA)-certified LBP Inspector.

"A copy of this summary must be provided to new lessees (tenants) and purchasers of this property under Federal law (24 CFR 35 and 40 CFR part 745) before they become obligated under a lease or sales contract. The complete report must also be provided to new purchasers and it must be made available to new tenants. Landlords (lessors) and sellers are also required to distribute an educational pamphlet approved by the U.S. Environmental Protection Agency and include standard warming language in their leases or sales contracts to ensure that parents have the information they need to protect their children from lead-based paint.

### **TESTING METHODOLOGY**

Lead, in paint and coatings, was measured using a portable Protec LPA-1 X-Ray Fluorescence (XRF) Analyzer. XRF sampling measures the lead content of the paint in place. Testing is nondestructive, and is considered to detect lead through all layers of paint to the substrate. Lead content is read directly by the XRF, which measures the total amount of lead in the paint, and reports the measured value as milligrams of lead per square centimeter of surface area (mg/cm<sup>2</sup>). Measurements of 1 mg/cm<sup>2</sup> or more of lead are considered to be a positive result indicating the presence of LBP.

This lead inspection methodology is based on *Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing* (Department of Housing and Urban Development [HUD], second edition, July 2012). XRF calibration check readings were collected and evaluated before and after conducting the survey. Field data reports are provided in Attachment A.

#### RESULTS AND CONCLUSIONS

Testing was performed on painted building components identified at the Property. None of the exterior or interior painted components were identified with lead at or above the federal standard of 1.0 mg/cm<sup>2</sup>.

Copies of the field drawing and testing data sheets are included in Attachment A.

A *Certificate of Lead-Based Paint Free Housing* has been issued pursuant to the residential Lead-Based Paint Hazard Reduction Act of 1992, 42 United States Code (USC) 4852d, 24 Code of Federal Regulations (CFR) Part 35, and 40 CFR Part 745 (see Attachment B).

"The results of this inspection indicate that lead in amounts greater than or equal to 1.0 mg/cm<sup>2</sup> in paint were not found on one or more building components, using the inspection protocol in Chapter 7 of the 'Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing' (second edition, July 2012). Therefore, this dwelling does qualify for the exemption in 24 CFR part 35 and 40 CFR part 745 for target housing being leased that is free of lead-based paint, as defined in the rule. Some painted surfaces may contain level of lead below 1.0 mg/cm<sup>2</sup>, which could create lead dust or lead contaminated soil hazards if the paint is turned into dust by abrasion, scraping, or sanding. This report should be kept by the inspector and should also be kept by the owner and all future owners for the life of the dwelling."

Lead, in paint, dust, and soil, is regulated by the USEPA (40 CFR 745, Identification of Dangerous Levels of Lead) and HUD (29 CFR Part 35, Subpart B-M, Lead Safe Housing Rule). There are no state or local regulations in Florida for LBP management.

#### LIMITATIONS AND RELIANCE

The results, findings, and conclusions expressed herein are based only on conditions which were observed during our survey of the building. NOVA and this report make no representation or assumptions as to past conditions or future occurrences. Certifications for the individuals involved in completing this assessment are presented as Attachment B.

The study and report was prepared on behalf of the Client. This report can be relied upon by the Client and other entities noted in 24 CFR Part 35 (HUD) and 40 CFR Part 745 (USEPA).

#### CLOSURE

We thank you for the opportunity to be of service. Please do not hesitate to contact us should you have any questions regarding this report.

Sincerely,

NOVA ENGINEERING AND ENVIRONMENTAL, LLC

Which Sottet

Attention: Mr. Keith Johnson

Subject: Report of Pre-Demolition Asbestos Containing Materials Survey RIDDELL RESIDENCE 9980 Bristol Park Road Cantonment, Escambia County, Florida NOVA Project Number 10116-8317003.000

Dear Mr. Johnson:

**NOVA Engineering and Environmental LLC (NOVA)** has completed the Pre-Demolition Asbestos Containing Materials (ACMs) Survey for the house and associated buildings of the Riddell residence located at 9980 Bristol Park Road, Cantonment, Escambia County, Florida (Subject Property). We appreciate your selection of NOVA and for the opportunity to be of service on this project. Please feel free to contact us if you have any questions or if we may be of further assistance.

Sincerely, NOVA Engineering and Environmental LLC

Mark Bottorff Accredited Asbestos Inspector

# 1.0 SUMMARY

A brief summary of our findings is presented below. This summary is provided for convenience and should not be substituted for review of the full report, including all attachments as provided herein.

## 1.1 ASBESTOS

During this study, twelve (12) samples (containing 18 total layers) of joint compound, wallboard, troweled-on ceiling material, caulking material and roofing materials were sampled by NOVA and analyzed by Arrowhead Technologies, LLC. using Polarized Light Microscopy (PLM), with zero (0) of the analyzed sample layers indicating asbestos containing materials (ACM).

Polarized Light Microscopy (PLM) is inexpensive, but it can identify non-asbestos fibers as asbestos. If the PLM analytical results indicate levels between "trace" (<1%) and 1% asbestos, the samples must be analyzed by point count methodology to better quantify the actual asbestos content. Also, in an effort to eliminate false positives (and costly unnecessary abatement), samples reported as containing between 1% and 10% asbestos can be analyzed/verified by point count. The alternative is to assume the subject material to be asbestos containing.

The Occupational Safety and Health Administration (OSHA) Asbestos Standard for Construction Industry 29 CFR 1926.1101 regulates workplace exposure to asbestos. OSHA does not define Asbestos Containing Material on asbestos content. Any detectable asbestos, even if <1%, makes it asbestos for purposes of complying with OSHA regulations to determine worker exposure. The OSHA standard requires that employee exposure to airborne asbestos fibers be maintained below 0.1 asbestos fibers per cubic centimeter of air (0.1 f/cc). The OSHA standard classifies construction and maintenance activities, which could disturb ACM, and specifies work practices and precautions which employers must follow when engaging in each class of regulated work. In addition to worker protection, the mean and methods necessary for ACM abatement are the sole responsibility of the abatement contractor.

A complete list of suspected ACM samples obtained is shown in the laboratory report (included in Appendix A).

# 2.0 INTRODUCTION

## 2.1 DESCRIPTION OF SUBJECT PROPERTY

The Subject Property includes the house and storage building of the Riddell Residence located at 9980 Bristol Park Road in Cantonment, Escambia County, Florida (Subject Property). Specifically, for the purposes of this survey, the Subject Property surveyed includes the house and buildings associated with the residence. The Riddell Residence includes an approximately 2,390-square foot, one (1) story (including sub floors) concrete slab, wood framed residential building originally constructed in 1994 with renovations in 2014. According to the Escambia County Geographical Information System (GIS) database, the Subject Property is located on an approximately 0.88-acre parcel of land and is identified as Parcel Ref 03-1S-31-1500-013-003.

## 2.2 PURPOSE

As requested by Wetland Sciences, Inc. (CLIENT), the Pre-Demolition Asbestos Containing Materials (ACMs) Survey was performed in an effort to identify ACMs at the Subject Property. This work has been performed in general accordance with NOVA Proposal Number 016-30178439 dated January 20, 2017, applicable state and federal regulations, and routine industry practice.

ACM sampling was performed in general accordance with the Asbestos Hazard Emergency Response Act (AHERA) guidelines and ASTM E2356-10,"*Standard Practice for Comprehensive Building Asbestos Survey*" as a Baseline Survey. Deviations from the Baseline Survey protocols include:

• No Deviations

We understand that the CLIENT does not intend to seek funding from the Department of Housing and Urban Development (HUD), Federal Housing Administration (FHA), Fannie May, Freddie Mac or the Florida State Housing Authority. In addition, the CLIENT does not anticipate that any portion of the Subject Property will be used as a school or day care facility.

## 2.3 LIMITATIONS

NOVA has performed the Pre-Demolition Asbestos Containing Materials Survey, which is a <u>limited</u> inquiry into a property's environmental status and is not sufficient to discover every potential source of ACMs at the property to be evaluated. No survey can wholly eliminate uncertainty regarding the potential ACMs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for ACMs in connection with a property.

The level of inquiry is variable. Not every property will warrant the same level of assessment for ACMs. Consistent with good commercial or customary practices, the appropriate level of assessment will be guided by the type of property subject to assessment, the intended use of the property, the expertise and risk tolerance of the CLIENT, and the information developed in the course of the assessment.

NOVA's findings, opinions, conclusions and recommendations are based on information obtained through visual assessment of surficial conditions in readily accessible areas. It is possible that additional ACMs exist or may subsequently become known that may impact or change the assessment after NOVA's services are complete.

NOVA's assessment represents our professional opinion, only. Therefore, NOVA cannot, under any circumstances, make a statement of warranty or guarantee, expressed or implied, that ACMs are limited to those that are discovered while we are performing the Survey.

## 2.4 USER RELIANCE

NOVA's Pre-Demolition Asbestos Containing Materials Survey, along with the findings and conclusions contained in the report, either in completed form, summary form, or by extraction, is prepared, and intended, for the sole use of Wetland Sciences, Inc. (CLIENT) and therefore may not contain sufficient information for other purposes or parties. The CLIENT is the only intended beneficiary of this report. The contents of NOVA's report will continue to be the property of NOVA. NOVA's report may not be disclosed to, used by, or relied upon by, any person or entity other than the CLIENT without the express written consent of NOVA.

Authorization for disclosure to a third party or authorization for third-party reliance on a final report of any report will be considered by NOVA upon the written request of the CLIENT. NOVA reserves the right to deny authorization to allow disclosure or reliance of NOVA's report to third parties.

# 3.0 ASBESTOS CONTAINING MATERIALS

## 3.1 FIELD AND LABORATORY SERVICES

Mark Bottorff, a NOVA professional and federal and state certified asbestos inspector, performed the field work for the Pre-Demolition Asbestos Containing Materials Survey for the Subject Property on March 30, 2017.

#### 3.1.1 ASBESTOS CONTAINING MATERIALS SAMPLING

The building areas were visually assessed by NOVA to identify suspect ACMs, which were then grouped into three categories according to their intended use:

- **Surfacing Materials** such as sprayed-on or troweled fireproofing, acoustical and decorative insulation, textured "popcorn" finishes, paint, stucco, etc.
- **Thermal System Insulation** (TSI), such as pipe, boiler and storage tank insulation, and insulation on ducts, pumps, heat exchangers, and other equipment.
- **Miscellaneous Materials**, such as floor and ceiling tiles, wallboard, asbestoscement board, siding and other building materials that did not fall into one of the previously mentioned categories.

Where applicable, materials with similar texture, color and general appearance were considered homogeneous for sampling purposes, including visually similar materials on different floors. NOVA's assessment also included touching representative samples to determine friability, a mechanical classification defined as whether a material can be crumbled, pulverized, or reduced to powder by hand pressure.

Bulk samples were subsequently obtained in general accordance with the AHERA (40 CFR 763.86, Sampling) and ASTM E2356-10 procedures. The samples were placed in appropriate containers, and the containers sealed and labeled with a unique identification number. The samples were subsequently transported (following routine industry practices and chain-of-custody procedures) to Arrowhead Technologies, LLC for analysis. Arrowhead Technologies is a United States Department of Commerce National Institute of Standards and Technologies NVLAP Certified Laboratory (See Appendix B).

The ACM samples were analyzed for asbestos using Polarized Light Microscopy (PLM) methods in accordance with EPA Method 600/R-93/116. Copies of the complete asbestos laboratory report and chain-of custody are included in Appendix A.

## 3.2 ASBESTOS

During this study, twelve (12) samples (containing 18 total layers) of joint compound, wallboard, troweled-on ceiling material, caulking material and roofing materials were sampled by NOVA and analyzed by Arrowhead Technologies, LLC. using Polarized Light Microscopy (PLM), with zero (0) of the analyzed sample layers indicating asbestos containing materials (ACM).

Below is a summary of ACM identified at the Subject Property:

#### No ACM's were identified at the Subject Property.

The Occupational Safety and Health Administration (OSHA) Asbestos Standard for Construction Industry 29 CFR 1926.1101 regulates workplace exposure to asbestos. OSHA does not define Asbestos Containing Material on asbestos content. Any detectable asbestos, even if <1%, makes it asbestos for purposes of complying with OSHA regulations to determine worker exposure. The OSHA standard requires that employee exposure to airborne asbestos fibers be maintained below 0.1 asbestos fibers per cubic centimeter of air (0.1 f/cc). The OSHA standard classifies construction and maintenance activities, which could disturb ACM, and specifies work practices and precautions which employers must follow when engaging in each class of regulated work. In addition to worker protection, the mean and methods necessary for ACM abatement are the sole responsibility of the abatement contractor.

A complete list of suspected ACM samples obtained is shown in the laboratory report (included in Appendix A).

## 3.3 ASBESTOS ABATEMENT

Any component, which is similar in appearance to, and is in the general vicinity or similar application of samples identified as containing asbestos, as well as any other materials not shown by proper sampling and analysis to be non-asbestos containing, should be handled as asbestos-containing material (ACM). As previously noted, determination of the actual quantities of ACMs at all locations should be made by the contractor during a site inspection prior to beginning abatement.

ACMs should be abated (removed) prior to disturbance by maintenance, renovation and/or demolition by a licensed asbestos abatement contractor and disposed at an approved solid waste disposal facility.

Abatement is highly regulated and consists of several parts. In addition to the demolition/renovation permit, a ten (10) day advance notification to the Florida Environmental Protection Division (FL-EPD) is required.

During abatement, third party monitoring is recommended to review if the asbestos is adequately managed and contained during the abatement process and to document clearance and re-occupancy criteria established for the project.

Most Clients also request an abatement management report. This report compiles pertinent data regarding the personnel, abatement, and asbestos disposal for liability management after the fact should there be concerns later from workers or others. The ten (10) day notice, abatement, third party oversight, and management report are not included with the authorized scope of work for this project, but we can provide these supplemental services, if desired.

Materials having results of analysis of less than 1% asbestos are considered to be nonasbestos containing materials and do not have to be treated as asbestos in the work place. However, if disturbed by renovation or demolition, prudent care should be observed regarding worker exposure to materials containing asbestos even if less than 1%.

Polarized Light Microscopy (PLM) is inexpensive, but it can identify non-asbestos fibers as asbestos. If the PLM analytical results indicate levels between "trace" (<1%) and 1% asbestos, the samples must be analyzed by point count methodology to better quantify the actual asbestos content. Also, in an effort to eliminate false positives (and costly unnecessary abatement), samples reported as containing between 1% and 10% asbestos can be analyzed/verified by point count. The alternative is to assume the subject material to be asbestos containing.

The Occupational Safety and Health Administration (OSHA) Asbestos Standard for Construction Industry 29 CFR 1926.1101 regulates workplace exposure to asbestos. OSHA does not define Asbestos Containing Material on asbestos content. Any detectable asbestos, even if <1%, makes it asbestos for purposes of complying with OSHA regulations to determine worker exposure. The OSHA standard requires that employee exposure to airborne asbestos fibers be maintained below 0.1 asbestos fibers per cubic centimeter of air (0.1 f/cc). The OSHA standard classifies construction and maintenance activities, which could disturb ACM, and specifies work practices and precautions which employers must follow when engaging in each class of regulated work. In addition to worker protection, the mean and methods necessary for ACM abatement are the sole responsibility of the abatement contractor.

Please note that the means and methods necessary for ACM abatement, as well as worker protection and monitoring, are the sole responsibility of the abatement contractor.

#### SCOPE OF THIS REPORT

These samples were obtained as a part of a building survey; this report is only intended to be used as a part of the survey report issued by the surveyor. This report explains the laboratory analysis and results. The surveyor's report explains the sampling protocol used, when the samples were obtained, the location(s) of the samples, where the materials were observed in the building, quantities of materials observed, condition of the materials and the extent of his/her survey. Sample locations and material descriptions are given by the surveyor on the chain of custody but included here (possibly abbreviated) only as a convenience for the reader.

This report may not be reproduced without written permission of Arrowhead and must be reproduced in full.

#### STATEMENT OF LABORATORY ACCREDITATION

The samples were analyzed in general accordance with the procedures outlined in the Method for the Determination of Asbestos in Bulk Building Materials, EPA/600/R-93/116, and the Interim Method for the Determination of Asbestos in Bulk Insulation Samples, EPA 600/M4-82-020. The results of each bulk sample relate only to the material tested and the results shall not be used to claim product endorsement by NVLAP or any agency of the U.S. Government.

Floor tile and other resinously bound materials, when analyzed by the EPA method, may yield false negative results because of limitations in separating closely bound fibers and in detecting fibers of small length and diameter. When a definitive result is required, Arrowhead recommends utilizing alternative methods of identification, including Transmission Electron Microscopy.

Specific questions concerning bulk sample results shall be directed to the Laboratory Director.

April 3, 2017

Mr. Keith Johnson Wetland Sciences, Inc. 3308 Gulf Beach Hwy Pensacola, Florida 32507

Subject: LEAD-BASED PAINT INSPECTION REPORT Group 1 Houses – Riddell Residence 9980 Bristol Park Road Cantonment, Florida NOVA Project No. 10116-8317003.000

Dear Mr. Johnson:

**NOVA Engineering and Environmental LLC (NOVA)** is pleased to present this Lead-Based Paint (LBP) Inspection Report to **Wetland Sciences, Inc.** (the Client) for the services completed at the above-referenced property (the "Property"). The scope of work completed at the Property and described herein was conducted in general accordance with the authorization from the Client.

#### PROJECT SUMMARY

On March 30, 2017, NOVA staff completed a LBP survey of the residential property located at 9980 Bristol Park Road in Cantonment, Florida. Testing was completed by Mr. Mark Bottorff, a United States Environmental Protection Agency (USEPA)-certified LBP Inspector.

"A copy of this summary must be provided to new lessees (tenants) and purchasers of this property under Federal law (24 CFR 35 and 40 CFR part 745) before they become obligated under a lease or sales contract. The complete report must also be provided to new purchasers and it must be made available to new tenants. Landlords (lessors) and sellers are also required to distribute an educational pamphlet approved by the U.S. Environmental Protection Agency and include standard warming language in their leases or sales contracts to ensure that parents have the information they need to protect their children from lead-based paint.

### TESTING METHODOLOGY

Lead, in paint and coatings, was measured using a portable Protec LPA-1 X-Ray Fluorescence (XRF) Analyzer. XRF sampling measures the lead content of the paint in place. Testing is nondestructive, and is considered to detect lead through all layers of paint to the substrate. Lead content is read directly by the XRF, which measures the total amount of lead in the paint, and reports the measured value as milligrams of lead per square centimeter of surface area (mg/cm<sup>2</sup>). Measurements of 1 mg/cm<sup>2</sup> or more of lead are considered to be a positive result indicating the presence of LBP.

This lead inspection methodology is based on *Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing* (Department of Housing and Urban Development [HUD], second edition, July 2012). XRF calibration check readings were collected and evaluated before and after conducting the survey. Field data reports are provided in Attachment A.

#### RESULTS AND CONCLUSIONS

Testing was performed on painted building components identified at the Property. None of the exterior or interior painted components were identified with lead at or above the federal standard of 1.0 mg/cm<sup>2</sup>.

Copies of the field drawing and testing data sheets are included in Attachment A.

A *Certificate of Lead-Based Paint Free Housing* has been issued pursuant to the residential Lead-Based Paint Hazard Reduction Act of 1992, 42 United States Code (USC) 4852d, 24 Code of Federal Regulations (CFR) Part 35, and 40 CFR Part 745 (see Attachment B).

"The results of this inspection indicate that lead in amounts greater than or equal to 1.0 mg/cm<sup>2</sup> in paint were not found on one or more building components, using the inspection protocol in Chapter 7 of the 'Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing' (second edition, July 2012). Therefore, this dwelling does qualify for the exemption in 24 CFR part 35 and 40 CFR part 745 for target housing being leased that is free of lead-based paint, as defined in the rule. Some painted surfaces may contain level of lead below 1.0 mg/cm<sup>2</sup>, which could create lead dust or lead contaminated soil hazards if the paint is turned into dust by abrasion, scraping, or sanding. This report should be kept by the inspector and should also be kept by the owner and all future owners for the life of the dwelling."

Lead, in paint, dust, and soil, is regulated by the USEPA (40 CFR 745, Identification of Dangerous Levels of Lead) and HUD (29 CFR Part 35, Subpart B-M, Lead Safe Housing Rule). There are no state or local regulations in Florida for LBP management.

#### LIMITATIONS AND RELIANCE

The results, findings, and conclusions expressed herein are based only on conditions which were observed during our survey of the building. NOVA and this report make no representation or assumptions as to past conditions or future occurrences. Certifications for the individuals involved in completing this assessment are presented as Attachment B.

The study and report was prepared on behalf of the Client. This report can be relied upon by the Client and other entities noted in 24 CFR Part 35 (HUD) and 40 CFR Part 745 (USEPA).

#### CLOSURE

We thank you for the opportunity to be of service. Please do not hesitate to contact us should you have any questions regarding this report.

Sincerely,

NOVA ENGINEERING AND ENVIRONMENTAL LLC

Attention: Mr. Keith Johnson

Subject: Report of Pre-Demolition Asbestos Containing Materials Survey MUSICK RESIDENCE 10070 Bristol Park Road Cantonment, Escambia County, Florida NOVA Project Number 10116-8317003.000

Dear Mr. Johnson:

**NOVA Engineering and Environmental LLC (NOVA)** has completed the Pre-Demolition Asbestos Containing Materials (ACMs) Survey for the house and associated buildings of the Riddell residence located at 10070 Bristol Park Road, Cantonment, Escambia County, Florida (Subject Property). We appreciate your selection of NOVA and for the opportunity to be of service on this project. Please feel free to contact us if you have any questions or if we may be of further assistance.

Sincerely, NOVA Engineering and Environmental LLC

Mark Bottorff Accredited Asbestos Inspector

Lawrence G. Schmaltz, PE, FLAC Florida Asbestos Consultant (AX09)

APPENDIX A – ACM LABORATORY ANALYTICAL DATA APPENDIX B – CERTIFICATIONS

# 1.0 SUMMARY

A brief summary of our findings is presented below. This summary is provided for convenience and should not be substituted for review of the full report, including all attachments as provided herein.

## 1.1 ASBESTOS

During this study, fifteen (15) samples (containing 24 total layers) of joint compound, wallboard, vinyl flooring, popcorn ceiling material, caulking material and roofing materials were sampled by NOVA and analyzed by Arrowhead Technologies, LLC. using Polarized Light Microscopy (PLM), with zero (0) of the analyzed sample layers indicating asbestos containing materials (ACM).

Polarized Light Microscopy (PLM) is inexpensive, but it can identify non-asbestos fibers as asbestos. If the PLM analytical results indicate levels between "trace" (<1%) and 1% asbestos, the samples must be analyzed by point count methodology to better quantify the actual asbestos content. Also, in an effort to eliminate false positives (and costly unnecessary abatement), samples reported as containing between 1% and 10% asbestos can be analyzed/verified by point count. The alternative is to assume the subject material to be asbestos containing.

The Occupational Safety and Health Administration (OSHA) Asbestos Standard for Construction Industry 29 CFR 1926.1101 regulates workplace exposure to asbestos. OSHA does not define Asbestos Containing Material on asbestos content. Any detectable asbestos, even if <1%, makes it asbestos for purposes of complying with OSHA regulations to determine worker exposure. The OSHA standard requires that employee exposure to airborne asbestos fibers be maintained below 0.1 asbestos fibers per cubic centimeter of air (0.1 f/cc). The OSHA standard classifies construction and maintenance activities, which could disturb ACM, and specifies work practices and precautions which employers must follow when engaging in each class of regulated work. In addition to worker protection, the mean and methods necessary for ACM abatement are the sole responsibility of the abatement contractor.

A complete list of suspected ACM samples obtained is shown in the laboratory report (included in Appendix A).

# 2.0 INTRODUCTION

## 2.1 DESCRIPTION OF SUBJECT PROPERTY

The Subject Property includes the house and storage building of the Riddell Residence located at 10070 Bristol Park Road in Cantonment, Escambia County, Florida (Subject Property). Specifically, for the purposes of this survey, the Subject Property surveyed includes the house and buildings associated with the residence. The Riddell Residence includes an approximately 2,488-square foot, one (1) story (including sub floors) concrete slab, wood framed residential building originally constructed in 1997 with renovations in 2014. According to the Escambia County Geographical Information System (GIS) database, the Subject Property is located on an approximately 0.65-acre parcel of land and is identified as Parcel Ref 03-1S-31-1500-004-003.

## 2.2 PURPOSE

As requested by Wetland Sciences, Inc. (CLIENT), the Pre-Demolition Asbestos Containing Materials (ACMs) Survey was performed in an effort to identify ACMs at the Subject Property. This work has been performed in general accordance with NOVA Proposal Number 016-30178439 dated January 20, 2017, applicable state and federal regulations, and routine industry practice.

ACM sampling was performed in general accordance with the Asbestos Hazard Emergency Response Act (AHERA) guidelines and ASTM E2356-10,"*Standard Practice for Comprehensive Building Asbestos Survey*" as a Baseline Survey. Deviations from the Baseline Survey protocols include:

• No Deviations

We understand that the CLIENT does not intend to seek funding from the Department of Housing and Urban Development (HUD), Federal Housing Administration (FHA), Fannie May, Freddie Mac or the Florida State Housing Authority. In addition, the CLIENT does not anticipate that any portion of the Subject Property will be used as a school or day care facility.

## 2.3 LIMITATIONS

NOVA has performed the Pre-Demolition Asbestos Containing Materials Survey, which is a <u>limited</u> inquiry into a property's environmental status and is not sufficient to discover every potential source of ACMs at the property to be evaluated. No survey can wholly eliminate uncertainty regarding the potential ACMs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for ACMs in connection with a property.

The level of inquiry is variable. Not every property will warrant the same level of assessment for ACMs. Consistent with good commercial or customary practices, the appropriate level of assessment will be guided by the type of property subject to assessment, the intended use of the property, the expertise and risk tolerance of the CLIENT, and the information developed in the course of the assessment.

NOVA's findings, opinions, conclusions and recommendations are based on information obtained through visual assessment of surficial conditions in readily accessible areas. It is possible that additional ACMs exist or may subsequently become known that may impact or change the assessment after NOVA's services are complete.

NOVA's assessment represents our professional opinion, only. Therefore, NOVA cannot, under any circumstances, make a statement of warranty or guarantee, expressed or implied, that ACMs are limited to those that are discovered while we are performing the Survey.

## 2.4 USER RELIANCE

NOVA's Pre-Demolition Asbestos Containing Materials Survey, along with the findings and conclusions contained in the report, either in completed form, summary form, or by extraction, is prepared, and intended, for the sole use of Wetland Sciences, Inc. (CLIENT) and therefore may not contain sufficient information for other purposes or parties. The CLIENT is the only intended beneficiary of this report. The contents of NOVA's report will continue to be the property of NOVA. NOVA's report may not be disclosed to, used by, or relied upon by, any person or entity other than the CLIENT without the express written consent of NOVA.

Authorization for disclosure to a third party or authorization for third-party reliance on a final report of any report will be considered by NOVA upon the written request of the CLIENT. NOVA reserves the right to deny authorization to allow disclosure or reliance of NOVA's report to third parties.

# 3.0 ASBESTOS CONTAINING MATERIALS

## 3.1 FIELD AND LABORATORY SERVICES

Mark Bottorff, a NOVA professional and federal and state certified asbestos inspector, performed the field work for the Pre-Demolition Asbestos Containing Materials Survey for the Subject Property on March 30, 2017.

#### 3.1.1 ASBESTOS CONTAINING MATERIALS SAMPLING

The building areas were visually assessed by NOVA to identify suspect ACMs, which were then grouped into three categories according to their intended use:

- **Surfacing Materials** such as sprayed-on or troweled fireproofing, acoustical and decorative insulation, textured "popcorn" finishes, paint, stucco, etc.
- **Thermal System Insulation** (TSI), such as pipe, boiler and storage tank insulation, and insulation on ducts, pumps, heat exchangers, and other equipment.
- **Miscellaneous Materials**, such as floor and ceiling tiles, wallboard, asbestoscement board, siding and other building materials that did not fall into one of the previously mentioned categories.

Where applicable, materials with similar texture, color and general appearance were considered homogeneous for sampling purposes, including visually similar materials on different floors. NOVA's assessment also included touching representative samples to determine friability, a mechanical classification defined as whether a material can be crumbled, pulverized, or reduced to powder by hand pressure.

Bulk samples were subsequently obtained in general accordance with the AHERA (40 CFR 763.86, Sampling) and ASTM E2356-10 procedures. The samples were placed in appropriate containers, and the containers sealed and labeled with a unique identification number. The samples were subsequently transported (following routine industry practices and chain-of-custody procedures) to Arrowhead Technologies, LLC for analysis. Arrowhead Technologies is a United States Department of Commerce National Institute of Standards and Technologies NVLAP Certified Laboratory (See Appendix B).

The ACM samples were analyzed for asbestos using Polarized Light Microscopy (PLM) methods in accordance with EPA Method 600/R-93/116. Copies of the complete asbestos laboratory report and chain-of custody are included in Appendix A.

## 3.2 ASBESTOS

During this study, fifteen (15) samples (containing 24 total layers) of joint compound, wallboard, vinyl flooring, popcorn ceiling material, caulking material and roofing materials were sampled by NOVA and analyzed by Arrowhead Technologies, LLC. using Polarized Light Microscopy (PLM), with zero (0) of the analyzed sample layers indicating asbestos containing materials (ACM).

Below is a summary of ACM identified at the Subject Property:

#### No ACM's were identified at the Subject Property.

The Occupational Safety and Health Administration (OSHA) Asbestos Standard for Construction Industry 29 CFR 1926.1101 regulates workplace exposure to asbestos. OSHA does not define Asbestos Containing Material on asbestos content. Any detectable asbestos, even if <1%, makes it asbestos for purposes of complying with OSHA regulations to determine worker exposure. The OSHA standard requires that employee exposure to airborne asbestos fibers be maintained below 0.1 asbestos fibers per cubic centimeter of air (0.1 f/cc). The OSHA standard classifies construction and maintenance activities, which could disturb ACM, and specifies work practices and precautions which employers must follow when engaging in each class of regulated work. In addition to worker protection, the mean and methods necessary for ACM abatement are the sole responsibility of the abatement contractor.

A complete list of suspected ACM samples obtained is shown in the laboratory report (included in Appendix A).

## 3.3 ASBESTOS ABATEMENT

Any component, which is similar in appearance to, and is in the general vicinity or similar application of samples identified as containing asbestos, as well as any other materials not shown by proper sampling and analysis to be non-asbestos containing, should be handled as asbestos-containing material (ACM). As previously noted, determination of the actual quantities of ACMs at all locations should be made by the contractor during a site inspection prior to beginning abatement.

ACMs should be abated (removed) prior to disturbance by maintenance, renovation and/or demolition by a licensed asbestos abatement contractor and disposed at an approved solid waste disposal facility.

Abatement is highly regulated and consists of several parts. In addition to the demolition/renovation permit, a ten (10) day advance notification to the Florida Environmental Protection Division (FL-EPD) is required.

During abatement, third party monitoring is recommended to review if the asbestos is adequately managed and contained during the abatement process and to document clearance and re-occupancy criteria established for the project.

Most Clients also request an abatement management report. This report compiles pertinent data regarding the personnel, abatement, and asbestos disposal for liability management after the fact should there be concerns later from workers or others. The ten (10) day notice, abatement, third party oversight, and management report are not included with the authorized scope of work for this project, but we can provide these supplemental services, if desired.

Materials having results of analysis of less than 1% asbestos are considered to be nonasbestos containing materials and do not have to be treated as asbestos in the work place. However, if disturbed by renovation or demolition, prudent care should be observed regarding worker exposure to materials containing asbestos even if less than 1%.

Polarized Light Microscopy (PLM) is inexpensive, but it can identify non-asbestos fibers as asbestos. If the PLM analytical results indicate levels between "trace" (<1%) and 1% asbestos, the samples must be analyzed by point count methodology to better quantify the actual asbestos content. Also, in an effort to eliminate false positives (and costly unnecessary abatement), samples reported as containing between 1% and 10% asbestos can be analyzed/verified by point count. The alternative is to assume the subject material to be asbestos containing.

The Occupational Safety and Health Administration (OSHA) Asbestos Standard for Construction Industry 29 CFR 1926.1101 regulates workplace exposure to asbestos. OSHA does not define Asbestos Containing Material on asbestos content. Any detectable asbestos, even if <1%, makes it asbestos for purposes of complying with OSHA regulations to determine worker exposure. The OSHA standard requires that employee exposure to airborne asbestos fibers be maintained below 0.1 asbestos fibers per cubic centimeter of air (0.1 f/cc). The OSHA standard classifies construction and maintenance activities, which could disturb ACM, and specifies work practices and precautions which employers must follow when engaging in each class of regulated work. In addition to worker protection, the mean and methods necessary for ACM abatement are the sole responsibility of the abatement contractor.

Please note that the means and methods necessary for ACM abatement, as well as worker protection and monitoring, are the sole responsibility of the abatement contractor.

On 3/31/2017, fifteen (15) bulk material samples were submitted by Mark C. Bottorff for asbestos analysis by PLM/DS. Copies of Bulk Sample Analysis sheets are attached; additional information may be found therein. The results are summarized below:

Lab Sample No.	Sample Description / Location	Asbestos Content
005084-001	Drywall & Joint Compound HA1-1	None Detected-White Joint Compound None Detected-Tan DW Paper Backing None Detected-White Drywall Materia
005084-002	Drywall & Joint Compound HA1-2	None Detected-White Joint Compound None Detected-Tan DW Paper Backing None Detected-White Drywall Materia
005084-003	Drywall & Joint Compound HA1-3	None Detected-White Joint Compound None Detected-Tan DW Paper Backing None Detected-White Drywall Materia
005084-004	Vinyl Flooring HA2-1	None Detected-Brown Vinyl Floor None Detected-White Mastic
005084-005	Vinyl Flooring HA2-2	None Detected-Brown Vinyl Floor None Detected-White Mastic
005084-006	Vinyl Flooring HA2-3	None Detected-Brown Vinyl Floor None Detected-White Mastic
005084-007	Popcorn Ceiling HA3-1	None Detected-Popcorn Ceiling Treat.
005084-008	Popcorn Ceiling HA3-2	None Detected-Popcorn Ceiling Treat.

Containing Materials (RACM) -- materials which are friable or may become friable -- be further analyzed by point counting when the results indicate less than ten percent asbestos by CVAE. Arrowhead utilizes CVAE on a routine basis and does not include point counting unless specifically requested. The results may not be reproduced except in full.

#### SCOPE OF THIS REPORT

These samples were obtained as a part of a building survey; this report is only intended to be used as a part of the survey report issued by the surveyor. This report explains the laboratory analysis and results. The surveyor's report explains the sampling protocol used, when the samples were obtained, the location(s) of the samples, where the materials were observed in the building, quantities of materials observed, condition of the materials and the extent of his/her survey. Sample locations and material descriptions are given by the surveyor on the chain of custody but included here (possibly abbreviated) only as a convenience for the reader.

This report may not be reproduced without written permission of Arrowhead and must be reproduced in full.

#### STATEMENT OF LABORATORY ACCREDITATION

The samples were analyzed in general accordance with the procedures outlined in the Method for the Determination of Asbestos in Bulk Building Materials, EPA/600/R-93/116, and the Interim Method for the Determination of Asbestos in Bulk Insulation Samples, EPA 600/M4-82-020. The results of each bulk sample relate only to the material tested and the results shall not be used to claim product endorsement by NVLAP or any agency of the U.S. Government.

Floor tile and other resinously bound materials, when analyzed by the EPA method, may yield false negative results because of limitations in separating closely bound fibers and in detecting fibers of small length and diameter. When a definitive result is required, Arrowhead recommends utilizing alternative methods of identification, including Transmission Electron Microscopy.

Specific questions concerning bulk sample results shall be directed to the Laboratory Director.

RICK SCOTT, GOVERNOR

KEN LAWSON, SECRETARY

April 3, 2017

Mr. Keith Johnson Wetland Sciences, Inc. 3308 Gulf Beach Hwy Pensacola, Florida 32507

Subject: LEAD-BASED PAINT INSPECTION REPORT Group 1 Houses – Musick Residence 10070 Bristol Park Road Cantonment, Florida NOVA Project No. 10116-8317003.000

Dear Mr. Johnson:

**NOVA Engineering and Environmental LLC (NOVA)** is pleased to present this Lead-Based Paint (LBP) Inspection Report to **Wetland Sciences, Inc.** (the Client) for the services completed at the above-referenced property (the "Property"). The scope of work completed at the Property and described herein was conducted in general accordance with the authorization from the Client.

#### PROJECT SUMMARY

On March 30, 2017, NOVA staff completed a LBP survey of the residential property located at 10070 Bristol Park Road in Cantonment, Florida. Testing was completed by Mr. Mark Bottorff, a United States Environmental Protection Agency (USEPA)-certified LBP Inspector.

"A copy of this summary must be provided to new lessees (tenants) and purchasers of this property under Federal law (24 CFR 35 and 40 CFR part 745) before they become obligated under a lease or sales contract. The complete report must also be provided to new purchasers and it must be made available to new tenants. Landlords (lessors) and sellers are also required to distribute an educational pamphlet approved by the U.S. Environmental Protection Agency and include standard warming language in their leases or sales contracts to ensure that parents have the information they need to protect their children from lead-based paint.

### **TESTING METHODOLOGY**

Lead, in paint and coatings, was measured using a portable Protec LPA-1 X-Ray Fluorescence (XRF) Analyzer. XRF sampling measures the lead content of the paint in place. Testing is nondestructive, and is considered to detect lead through all layers of paint to the substrate. Lead content is read directly by the XRF, which measures the total amount of lead in the paint, and reports the measured value as milligrams of lead per square centimeter of surface area (mg/cm<sup>2</sup>). Measurements of 1 mg/cm<sup>2</sup> or more of lead are considered to be a positive result indicating the presence of LBP.

This lead inspection methodology is based on *Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing* (Department of Housing and Urban Development [HUD], second edition, July 2012). XRF calibration check readings were collected and evaluated before and after conducting the survey. Field data reports are provided in Attachment A.

#### RESULTS AND CONCLUSIONS

Testing was performed on painted building components identified at the Property. None of the exterior or interior painted components were identified with lead at or above the federal standard of 1.0 mg/cm<sup>2</sup>.

Copies of the field drawing and testing data sheets are included in Attachment A.

A *Certificate of Lead-Based Paint Free Housing* has been issued pursuant to the residential Lead-Based Paint Hazard Reduction Act of 1992, 42 United States Code (USC) 4852d, 24 Code of Federal Regulations (CFR) Part 35, and 40 CFR Part 745 (see Attachment B).

"The results of this inspection indicate that lead in amounts greater than or equal to 1.0 mg/cm<sup>2</sup> in paint were not found on one or more building components, using the inspection protocol in Chapter 7 of the 'Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing' (second edition, July 2012). Therefore, this dwelling does qualify for the exemption in 24 CFR part 35 and 40 CFR part 745 for target housing being leased that is free of lead-based paint, as defined in the rule. Some painted surfaces may contain level of lead below 1.0 mg/cm<sup>2</sup>, which could create lead dust or lead contaminated soil hazards if the paint is turned into dust by abrasion, scraping, or sanding. This report should be kept by the inspector and should also be kept by the owner and all future owners for the life of the dwelling."

Lead, in paint, dust, and soil, is regulated by the USEPA (40 CFR 745, Identification of Dangerous Levels of Lead) and HUD (29 CFR Part 35, Subpart B-M, Lead Safe Housing Rule). There are no state or local regulations in Florida for LBP management.

#### LIMITATIONS AND RELIANCE

The results, findings, and conclusions expressed herein are based only on conditions which were observed during our survey of the building. NOVA and this report make no representation or assumptions as to past conditions or future occurrences. Certifications for the individuals involved in completing this assessment are presented as Attachment B.

The study and report was prepared on behalf of the Client. This report can be relied upon by the Client and other entities noted in 24 CFR Part 35 (HUD) and 40 CFR Part 745 (USEPA).

#### CLOSURE

We thank you for the opportunity to be of service. Please do not hesitate to contact us should you have any questions regarding this report.

Sincerely,

NOVA ENGINEERING AND ENVIRONMENTAL LLC

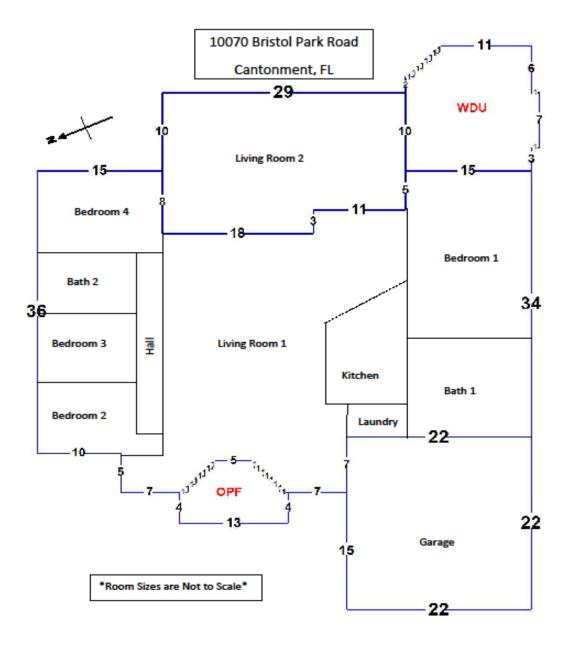

Which Sotteet

### STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report. I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

#### VALUE DEFINITION

Market Value Definition (below)

Alternate Value Definition (attached)

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

- 1. buyer and seller are typically motivated;
- 2. both parties are well informed or well advised and acting in what they consider their own best interests;
- a reasonable time is allowed for exposure in the open market;
- 4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
- 5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Park Place, Pensacola, FL 32505 Yes X No Is the subject property currently offered for sale or has it been offered for sale in the twelve months prior to the effective date of this appraisal? Report data source(s) used, offering price(s), and date(s). Pensacola Association or Realtor Multiple Listing Service (PARMLS) I did X did not analyze the contract for sale for the subject purchase transaction. Explain the results of the analysis of the contract for sale or why the analysis was not performed. N/A Contract Price \$ N/A Is the property seller the owner of public record? Yes No Data Source(s) Date of Contract N/A Yes No Is there any financial assistance (loan charges, sale concessions, gift or downpayment assistance, etc.) to be paid by any party on behalf of the borrower? If Yes, report the total dollar amount and describe the items to be paid. Note: Race and the racial composition of the neighborhood are not appraisal factors Neighborhood Characteristics **One-Unit Housing Trends** One-Unit Housing Present Land Use % JUrban X Suburban Property Values X Stable PRICE AGE 40 % Location Rural Increasing Declining One-Unit X 25-75% Over 75% ]Shortage X In Balance 5 % Over Supply Built-Up Under 25% Demand/Supply \$(000) (yrs) 2-4 Unit X 3-6 mths New Multi-Family 5 % Growth Rapid X Stable Slow Marketing Time Under 3 mths Over 6 mths 60 Low Neighborhood Boundaries Nine Mile Road to south, US Hwy 29 to east, Kingsfield Road to north, 500 Hiah 55 Commercial 15 % Beulah Road to west 190 Pred. 10-15 Other vacant 35 % Neighborhood Description See Attached Addendum Market Conditions (including support for the above conclusions) Following several years of declining residential real estate prices during the most recent recession of 2007-2012, market conditions for detached, single-family residences in the subject neighborhood have been stable to slightly increasing during the last 24 to 30 months. This is supported by per unit price indications from closed sales transactions. Dimensions Undetermined Area 0.8765 Acres Shape Wedge View Interior Specific Zoning Classification MDR Zoning Description Medium density residential, per Escambia County Zoning Compliance X Legal Legal Nonconforming (Grandfathered Use) No Zoning Illegal (describe) Is the highest and best use of the subject property as improved (or as proposed per plans and specifications) the present use? X Yes No If No, describe. Utilities Public Other (describe) Public Other (describe) Off-site Improvements—Type Public Private Electricity X <u>X</u> Street Asphalt Water X X X Alley None Gas Sanitary Sewer FEMA Special Flood Hazard Area Yes No FEMA Flood Zone undetermined FEMA Map # 12033C0290G FEMA Map Date 9/29/2006 X Yes No If No, describe. Are the utilities and off-site improvements typical for the market area? Are there any adverse site conditions or external factors (easements, encroachments, environmental conditions, land uses, etc.)? Yes X No If Yes, describe. We are aware that there have been two flooding events in the subject neighborhood during the last 28 years. However, judging by the strength of the market in the subdivisions affected by these events, as evidenced by recent sales, it does not appear that the market recognizes any discounting associated with this history. SEM File No. 16147Z8

This report form is designed to report an appraisal of a one-unit property or a one-unit property with an accessory unit; including a unit in a planned unit development (PUD). This report form is not designed to report an appraisal of a manufactured home or a unit in a condominium or cooperative project.

This appraisal report is subject to the following scope of work, intended use, intended user, definition of market value, statement of assumptions and limiting conditions, and certifications. Modifications, additions, or deletions to the intended use, intended user, definition of market value, or assumptions and limiting conditions are not permitted. The appraiser may expand the scope of work to include any additional research or analysis necessary based on the complexity of this appraisal assignment. Modifications or deletions to the certifications are also not permitted. However, additional certifications that do not constitute material alterations to this appraisal report, such as those required by law or those related to the appraiser's continuing education or membership in an appraisal organization, are permitted.

**SCOPE OF WORK:** The scope of work for this appraisal is defined by the complexity of this appraisal assignment and the reporting requirements of this appraisal report form, including the following definition of market value, statement of assumptions and limiting conditions, and certifications. The appraiser must, at a minimum: (1) perform a complete visual inspection of the interior and exterior areas of the subject property, (2) inspect the neighborhood, (3) inspect each of the comparable sales from at least the street, (4) research, verify, and analyze data from reliable public and/or private sources, and (5) report his or her analysis, opinions, and conclusions in this appraisal report.

**INTENDED USE:** The intended use of this appraisal report is for the lender/client to evaluate the property that is the subject of this appraisal for a mortgage finance transaction.

**INTENDED USER:** The intended user of this appraisal report is the lender/client.

**DEFINITION OF MARKET VALUE:** The most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller, each acting prudently, knowledgeably and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby: (1) buyer and seller are typically motivated; (2) both parties are well informed or well advised, and each acting in what he or she considers his or her own best interest; (3) a reasonable time is allowed for exposure in the open market; (4) payment is made in terms of cash in U. S. dollars or in terms of financial arrangements comparable thereto; and (5) the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions\* granted by anyone associated with the sale.

\*Adjustments to the comparables must be made for special or creative financing or sales concessions. No adjustments are necessary for those costs which are normally paid by sellers as a result of tradition or law in a market area; these costs are readily identifiable since the seller pays these costs in virtually all sales transactions. Special or creative financing adjustments can be made to the comparable property by comparisons to financing terms offered by a third party institutional lender that is not already involved in the property or transaction. Any adjustment should not be calculated on a mechanical dollar for dollar cost of the financing or concessions but the dollar amount of any adjustment should approximate the market's reaction to the financing or concessions based on the appraiser's judgment.

**STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS:** The appraiser's certification in this report is subject to the following assumptions and limiting conditions:

1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it, except for information that he or she became aware of during the research involved in performing this appraisal. The appraiser assumes that the title is good and marketable and will not render any opinions about the title.

2. The appraiser has provided a sketch in this appraisal report to show the approximate dimensions of the improvements. The sketch is included only to assist the reader in visualizing the property and understanding the appraiser's determination of its size.

3. The appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in this appraisal report whether any portion of the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.

4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand, or as otherwise required by law.

5. The appraiser has noted in this appraisal report any adverse conditions (such as needed repairs, deterioration, the presence of hazardous wastes, toxic substances, etc.) observed during the inspection of the subject property or that he or she became aware of during the research involved in performing this appraisal. Unless otherwise stated in this appraisal report, the appraiser has no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property.

6. The appraiser has based his or her appraisal report and valuation conclusion for an appraisal that is subject to satisfactory completion, repairs, or alterations on the assumption that the completion, repairs, or alterations of the subject property will be performed in a professional manner.

#### APPRAISER'S CERTIFICATION: The Appraiser certifies and agrees that:

1. I have, at a minimum, developed and reported this appraisal in accordance with the scope of work requirements stated in this appraisal report.

2. I performed a complete visual inspection of the interior and exterior areas of the subject property. I reported the condition of the improvements in factual, specific terms. I identified and reported the physical deficiencies that could affect the livability, soundness, or structural integrity of the property.

3. I performed this appraisal in accordance with the requirements of the Uniform Standards of Professional Appraisal Practice that were adopted and promulgated by the Appraisal Standards Board of The Appraisal Foundation and that were in place at the time this appraisal report was prepared.

4. I developed my opinion of the market value of the real property that is the subject of this report based on the sales comparison approach to value. I have adequate comparable market data to develop a reliable sales comparison approach for this appraisal assignment. I further certify that I considered the cost and income approaches to value but did not develop them, unless otherwise indicated in this report.

5. I researched, verified, analyzed, and reported on any current agreement for sale for the subject property, any offering for sale of the subject property in the twelve months prior to the effective date of this appraisal, and the prior sales of the subject property for a minimum of three years prior to the effective date of this appraisal, unless otherwise indicated in this report.

6. I researched, verified, analyzed, and reported on the prior sales of the comparable sales for a minimum of one year prior to the date of sale of the comparable sale, unless otherwise indicated in this report.

7. I selected and used comparable sales that are locationally, physically, and functionally the most similar to the subject property.

8. I have not used comparable sales that were the result of combining a land sale with the contract purchase price of a home that has been built or will be built on the land.

9. I have reported adjustments to the comparable sales that reflect the market's reaction to the differences between the subject property and the comparable sales.

10. I verified, from a disinterested source, all information in this report that was provided by parties who have a financial interest in the sale or financing of the subject property.

11. I have knowledge and experience in appraising this type of property in this market area.

12. I am aware of, and have access to, the necessary and appropriate public and private data sources, such as multiple listing services, tax assessment records, public land records and other such data sources for the area in which the property is located.

13. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable sources that I believe to be true and correct.

14. I have taken into consideration the factors that have an impact on value with respect to the subject neighborhood, subject property, and the proximity of the subject property to adverse influences in the development of my opinion of market value. I have noted in this appraisal report any adverse conditions (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) observed during the inspection of the subject property or that I became aware of during the research involved in performing this appraisal. I have considered these adverse conditions in my analysis of the property value, and have reported on the effect of the conditions on the value and marketability of the subject property.

15. I have not knowingly withheld any significant information from this appraisal report and, to the best of my knowledge, all statements and information in this appraisal report are true and correct.

16. I stated in this appraisal report my own personal, unbiased, and professional analysis, opinions, and conclusions, which are subject only to the assumptions and limiting conditions in this appraisal report.

17. I have no present or prospective interest in the property that is the subject of this report, and I have no present or prospective personal interest or bias with respect to the participants in the transaction. I did not base, either partially or completely, my analysis and/or opinion of market value in this appraisal report on the race, color, religion, sex, age, marital status, handicap, familial status, or national origin of either the prospective owners or occupants of the subject property or of the present owners or occupants of the properties in the vicinity of the subject property or on any other basis prohibited by law.

18. My employment and/or compensation for performing this appraisal or any future or anticipated appraisals was not conditioned on any agreement or understanding, written or otherwise, that I would report (or present analysis supporting) a predetermined specific value, a predetermined minimum value, a range or direction in value, a value that favors the cause of any party, or the attainment of a specific result or occurrence of a specific subsequent event (such as approval of a pending mortgage loan application).

19. I personally prepared all conclusions and opinions about the real estate that were set forth in this appraisal report. If I relied on significant real property appraisal assistance from any individual or individuals in the performance of this appraisal or the preparation of this appraisal report, I have named such individual(s) and disclosed the specific tasks performed in this appraisal report. I certify that any individual so named is qualified to perform the tasks. I have not authorized anyone to make a change to any item in this appraisal report; therefore, any change made to this appraisal is unauthorized and I will take no responsibility for it.

20. I identified the lender/client in this appraisal report who is the individual, organization, or agent for the organization that ordered and will receive this appraisal report.

21. The lender/client may disclose or distribute this appraisal report to: the borrower; another lender at the request of the borrower; the mortgagee or its successors and assigns; mortgage insurers; government sponsored enterprises; other secondary market participants; data collection or reporting services; professional appraisal organizations; any department, agency, or instrumentality of the United States; and any state, the District of Columbia, or other jurisdictions; without having to obtain the appraiser's or supervisory appraiser's (if applicable) consent. Such consent must be obtained before this appraisal report may be disclosed or distributed to any other party (including, but not limited to, the public through advertising, public relations, news, sales, or other media).

22. I am aware that any disclosure or distribution of this appraisal report by me or the lender/client may be subject to certain laws and regulations. Further, I am also subject to the provisions of the Uniform Standards of Professional Appraisal Practice that pertain to disclosure or distribution by me.

23. The borrower, another lender at the request of the borrower, the mortgagee or its successors and assigns, mortgage insurers, government sponsored enterprises, and other secondary market participants may rely on this appraisal report as part of any mortgage finance transaction that involves any one or more of these parties.

24. If this appraisal report was transmitted as an "electronic record" containing my "electronic signature," as those terms are defined in applicable federal and/or state laws (excluding audio and video recordings), or a facsimile transmission of this appraisal report containing a copy or representation of my signature, the appraisal report shall be as effective, enforceable and valid as if a paper version of this appraisal report were delivered containing my original hand written signature.

25. Any intentional or negligent misrepresentation(s) contained in this appraisal report may result in civil liability and/or criminal penalties including, but not limited to, fine or imprisonment or both under the provisions of Title 18, United States Code, Section 1001, et seq., or similar state laws.

#### SUPERVISORY APPRAISER'S CERTIFICATION: The Supervisory Appraiser certifies and agrees that:

1. I directly supervised the appraiser for this appraisal assignment, have read the appraisal report, and agree with the appraiser's analysis, opinions, statements, conclusions, and the appraiser's certification.

2. I accept full responsibility for the contents of this appraisal report including, but not limited to, the appraiser's analysis, opinions, statements, conclusions, and the appraiser's certification.

3. The appraiser identified in this appraisal report is either a sub-contractor or an employee of the supervisory appraiser (or the appraisal firm), is qualified to perform this appraisal, and is acceptable to perform this appraisal under the applicable state law.

4. This appraisal report complies with the Uniform Standards of Professional Appraisal Practice that were adopted and promulgated by the Appraisal Standards Board of The Appraisal Foundation and that were in place at the time this appraisal report was prepared.

5. If this appraisal report was transmitted as an "electronic record" containing my "electronic signature," as those terms are defined in applicable federal and/or state laws (excluding audio and video recordings), or a facsimile transmission of this appraisal report containing a copy or representation of my signature, the appraisal report shall be as effective, enforceable and valid as if a paper version of this appraisal report were delivered containing my original hand written signature.

#### **Neighborhood Description**

The subject neighborhood is at the northern edge of suburban growth of the urbanized areas of the City of Pensacola. With physical barriers to urban growth of Pensacola on the south, east, and west, the northern edge is the default area where any future growth will occur. The subject neighborhood includes established commercial development along US Highway 29 and most of Nine Mile Road. Commercial development and uses are increasing along Nine Mile Road, extending to the west of its intersection with Pine Forest Road. This commercial growth is in response to increasing residential subdivision development in the area over the last 10 to 25 years. Most residential development in this former agricultural-oriented band of the metropolitan area has occurred as branches from Nine Mile Road, Kingsfield Road, and Pine Forest Road.

#### **Comments on Sales Comparison**

From our research of the market area, three sales have been selected to which to compare the subject. These sold properties are of similar quality of construction as the subject. The subject property has had significant interior renovations within the last two years. All of the sales have had similar renovations.

Size adjustments have been applied to all sales with the subject being most similar to Sales One and Three for this characteristic. The subject's detached one car gagrae is inferior to each of the sales built-in two-car garage. The subject lacks the patio found with the other properties. The subject above ground pool adds some value to the subject in comparison to the sold proeprties that lack this feature.

Following all adjustments, the sales show a range of market value for the subject property between \$241,800 and \$251,100. With weight to each, it is our opinion that the sales indicate a current market value of \$247,000 for the subject property.

### **Final Reconciliation**

Of the three approaches to value, the direct sales comparison approach is the most reliable in rendering an opinion of market value for the subject property. With the subject involving a recently renovated home of over 22 years old, development of the cost approach is not considered as reliable a method of determining current market value as the direct sales comparison approach. Development of the cost approach is most applicable with new construction located in areas where recent sales of similar vacant lots are abundant and the market area has a reasonable supply of newly built, speculative homes inventory. Development of the income approach is most reliable in markets where there are an abundance of rental properties; homes within the subject neighborhood are almost entirely owner-occupied. Based on the research and analysis, we estimate the current market value of the subject property as \$247,000.

### Reasonable Exposure Time

My opinion of a reasonable exposure time for the subject property at the market value stated in this report is: 90-180 days.

Exposure time is the estimated length of time that the proeprty interest being appraised would have been offered on the market prior to the hypothetical consummation of a sale at market value on the effective date of the appraisal. This is a retrospective opinion based on an analysis of past events that assumes a competitive and open market. The appraiser has determined that the subject property would have to be exposed for three to six months on the open market of the effective date of this appraisal, at the appraised market value.

### Additional Certifications

X I have performed **NO** services, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment.

I HAVE performed services, as an appraiser or in another capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment. Those services are described in the comments below.

#### Additional Comments

Stephen McKenney, Florida State Registered Real Estate Trainee Appraiser #RI8246, provided significant real property appraisal assistance to the person signing this certification. This assistance included visiting the subject property with the appraiser; researching the market area, subject property, and market trends; analyzing the market and comparable properties; and reporting of descriptions, research, and analysis.

SEM File No. 16154Z8

This report form is designed to report an appraisal of a one-unit property or a one-unit property with an accessory unit; including a unit in a planned unit development (PUD). This report form is not designed to report an appraisal of a manufactured home or a unit in a condominium or cooperative project.

This appraisal report is subject to the following scope of work, intended use, intended user, definition of market value, statement of assumptions and limiting conditions, and certifications. Modifications, additions, or deletions to the intended use, intended user, definition of market value, or assumptions and limiting conditions are not permitted. The appraiser may expand the scope of work to include any additional research or analysis necessary based on the complexity of this appraisal assignment. Modifications or deletions to the certifications are also not permitted. However, additional certifications that do not constitute material alterations to this appraisal report, such as those required by law or those related to the appraiser's continuing education or membership in an appraisal organization, are permitted.

**SCOPE OF WORK:** The scope of work for this appraisal is defined by the complexity of this appraisal assignment and the reporting requirements of this appraisal report form, including the following definition of market value, statement of assumptions and limiting conditions, and certifications. The appraiser must, at a minimum: (1) perform a complete visual inspection of the interior and exterior areas of the subject property, (2) inspect the neighborhood, (3) inspect each of the comparable sales from at least the street, (4) research, verify, and analyze data from reliable public and/or private sources, and (5) report his or her analysis, opinions, and conclusions in this appraisal report.

**INTENDED USE:** The intended use of this appraisal report is for the lender/client to evaluate the property that is the subject of this appraisal for a mortgage finance transaction.

**INTENDED USER:** The intended user of this appraisal report is the lender/client.

**DEFINITION OF MARKET VALUE:** The most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller, each acting prudently, knowledgeably and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby: (1) buyer and seller are typically motivated; (2) both parties are well informed or well advised, and each acting in what he or she considers his or her own best interest; (3) a reasonable time is allowed for exposure in the open market; (4) payment is made in terms of cash in U. S. dollars or in terms of financial arrangements comparable thereto; and (5) the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions\* granted by anyone associated with the sale.

\*Adjustments to the comparables must be made for special or creative financing or sales concessions. No adjustments are necessary for those costs which are normally paid by sellers as a result of tradition or law in a market area; these costs are readily identifiable since the seller pays these costs in virtually all sales transactions. Special or creative financing adjustments can be made to the comparable property by comparisons to financing terms offered by a third party institutional lender that is not already involved in the property or transaction. Any adjustment should not be calculated on a mechanical dollar for dollar cost of the financing or concessions but the dollar amount of any adjustment should approximate the market's reaction to the financing or concessions based on the appraiser's judgment.

**STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS:** The appraiser's certification in this report is subject to the following assumptions and limiting conditions:

1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it, except for information that he or she became aware of during the research involved in performing this appraisal. The appraiser assumes that the title is good and marketable and will not render any opinions about the title.

2. The appraiser has provided a sketch in this appraisal report to show the approximate dimensions of the improvements. The sketch is included only to assist the reader in visualizing the property and understanding the appraiser's determination of its size.

3. The appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in this appraisal report whether any portion of the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.

4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand, or as otherwise required by law.

5. The appraiser has noted in this appraisal report any adverse conditions (such as needed repairs, deterioration, the presence of hazardous wastes, toxic substances, etc.) observed during the inspection of the subject property or that he or she became aware of during the research involved in performing this appraisal. Unless otherwise stated in this appraisal report, the appraiser has no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property.

6. The appraiser has based his or her appraisal report and valuation conclusion for an appraisal that is subject to satisfactory completion, repairs, or alterations on the assumption that the completion, repairs, or alterations of the subject property will be performed in a professional manner.

### APPRAISER'S CERTIFICATION: The Appraiser certifies and agrees that:

1. I have, at a minimum, developed and reported this appraisal in accordance with the scope of work requirements stated in this appraisal report.

2. I performed a complete visual inspection of the interior and exterior areas of the subject property. I reported the condition of the improvements in factual, specific terms. I identified and reported the physical deficiencies that could affect the livability, soundness, or structural integrity of the property.

3. I performed this appraisal in accordance with the requirements of the Uniform Standards of Professional Appraisal Practice that were adopted and promulgated by the Appraisal Standards Board of The Appraisal Foundation and that were in place at the time this appraisal report was prepared.

4. I developed my opinion of the market value of the real property that is the subject of this report based on the sales comparison approach to value. I have adequate comparable market data to develop a reliable sales comparison approach for this appraisal assignment. I further certify that I considered the cost and income approaches to value but did not develop them, unless otherwise indicated in this report.

5. I researched, verified, analyzed, and reported on any current agreement for sale for the subject property, any offering for sale of the subject property in the twelve months prior to the effective date of this appraisal, and the prior sales of the subject property for a minimum of three years prior to the effective date of this appraisal, unless otherwise indicated in this report.

6. I researched, verified, analyzed, and reported on the prior sales of the comparable sales for a minimum of one year prior to the date of sale of the comparable sale, unless otherwise indicated in this report.

7. I selected and used comparable sales that are locationally, physically, and functionally the most similar to the subject property.

8. I have not used comparable sales that were the result of combining a land sale with the contract purchase price of a home that has been built or will be built on the land.

9. I have reported adjustments to the comparable sales that reflect the market's reaction to the differences between the subject property and the comparable sales.

10. I verified, from a disinterested source, all information in this report that was provided by parties who have a financial interest in the sale or financing of the subject property.

11. I have knowledge and experience in appraising this type of property in this market area.

12. I am aware of, and have access to, the necessary and appropriate public and private data sources, such as multiple listing services, tax assessment records, public land records and other such data sources for the area in which the property is located.

13. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable sources that I believe to be true and correct.

14. I have taken into consideration the factors that have an impact on value with respect to the subject neighborhood, subject property, and the proximity of the subject property to adverse influences in the development of my opinion of market value. I have noted in this appraisal report any adverse conditions (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) observed during the inspection of the subject property or that I became aware of during the research involved in performing this appraisal. I have considered these adverse conditions in my analysis of the property value, and have reported on the effect of the conditions on the value and marketability of the subject property.

15. I have not knowingly withheld any significant information from this appraisal report and, to the best of my knowledge, all statements and information in this appraisal report are true and correct.

16. I stated in this appraisal report my own personal, unbiased, and professional analysis, opinions, and conclusions, which are subject only to the assumptions and limiting conditions in this appraisal report.

17. I have no present or prospective interest in the property that is the subject of this report, and I have no present or prospective personal interest or bias with respect to the participants in the transaction. I did not base, either partially or completely, my analysis and/or opinion of market value in this appraisal report on the race, color, religion, sex, age, marital status, handicap, familial status, or national origin of either the prospective owners or occupants of the subject property or of the present owners or occupants of the properties in the vicinity of the subject property or on any other basis prohibited by law.

18. My employment and/or compensation for performing this appraisal or any future or anticipated appraisals was not conditioned on any agreement or understanding, written or otherwise, that I would report (or present analysis supporting) a predetermined specific value, a predetermined minimum value, a range or direction in value, a value that favors the cause of any party, or the attainment of a specific result or occurrence of a specific subsequent event (such as approval of a pending mortgage loan application).

19. I personally prepared all conclusions and opinions about the real estate that were set forth in this appraisal report. If I relied on significant real property appraisal assistance from any individual or individuals in the performance of this appraisal or the preparation of this appraisal report, I have named such individual(s) and disclosed the specific tasks performed in this appraisal report. I certify that any individual so named is qualified to perform the tasks. I have not authorized anyone to make a change to any item in this appraisal report; therefore, any change made to this appraisal is unauthorized and I will take no responsibility for it.

20. I identified the lender/client in this appraisal report who is the individual, organization, or agent for the organization that ordered and will receive this appraisal report.

21. The lender/client may disclose or distribute this appraisal report to: the borrower; another lender at the request of the borrower; the mortgagee or its successors and assigns; mortgage insurers; government sponsored enterprises; other secondary market participants; data collection or reporting services; professional appraisal organizations; any department, agency, or instrumentality of the United States; and any state, the District of Columbia, or other jurisdictions; without having to obtain the appraiser's or supervisory appraiser's (if applicable) consent. Such consent must be obtained before this appraisal report may be disclosed or distributed to any other party (including, but not limited to, the public through advertising, public relations, news, sales, or other media).

22. I am aware that any disclosure or distribution of this appraisal report by me or the lender/client may be subject to certain laws and regulations. Further, I am also subject to the provisions of the Uniform Standards of Professional Appraisal Practice that pertain to disclosure or distribution by me.

23. The borrower, another lender at the request of the borrower, the mortgagee or its successors and assigns, mortgage insurers, government sponsored enterprises, and other secondary market participants may rely on this appraisal report as part of any mortgage finance transaction that involves any one or more of these parties.

24. If this appraisal report was transmitted as an "electronic record" containing my "electronic signature," as those terms are defined in applicable federal and/or state laws (excluding audio and video recordings), or a facsimile transmission of this appraisal report containing a copy or representation of my signature, the appraisal report shall be as effective, enforceable and valid as if a paper version of this appraisal report were delivered containing my original hand written signature.

25. Any intentional or negligent misrepresentation(s) contained in this appraisal report may result in civil liability and/or criminal penalties including, but not limited to, fine or imprisonment or both under the provisions of Title 18, United States Code, Section 1001, et seq., or similar state laws.

#### SUPERVISORY APPRAISER'S CERTIFICATION: The Supervisory Appraiser certifies and agrees that:

1. I directly supervised the appraiser for this appraisal assignment, have read the appraisal report, and agree with the appraiser's analysis, opinions, statements, conclusions, and the appraiser's certification.

2. I accept full responsibility for the contents of this appraisal report including, but not limited to, the appraiser's analysis, opinions, statements, conclusions, and the appraiser's certification.

3. The appraiser identified in this appraisal report is either a sub-contractor or an employee of the supervisory appraiser (or the appraisal firm), is qualified to perform this appraisal, and is acceptable to perform this appraisal under the applicable state law.

4. This appraisal report complies with the Uniform Standards of Professional Appraisal Practice that were adopted and promulgated by the Appraisal Standards Board of The Appraisal Foundation and that were in place at the time this appraisal report was prepared.

5. If this appraisal report was transmitted as an "electronic record" containing my "electronic signature," as those terms are defined in applicable federal and/or state laws (excluding audio and video recordings), or a facsimile transmission of this appraisal report containing a copy or representation of my signature, the appraisal report shall be as effective, enforceable and valid as if a paper version of this appraisal report were delivered containing my original hand written signature.

#### **Neighborhood Description**

The subject neighborhood is at the northern edge of suburban growth of the urbanized areas of the City of Pensacola. With physical barriers to urban growth of Pensacola on the south, east, and west, the northern edge is the default area where any future growth will occur. The subject neighborhood includes established commercial development along US Highway 29 and most of Nine Mile Road. Commercial development and uses are increasing along Nine Mile Road, extending to the west of its intersection with Pine Forest Road. This commercial growth is in response to increasing residential subdivision development in the area over the last 10 to 25 years. Most residential development in this former agricultural-oriented band of the metropolitan area has occurred as branches from Nine Mile Road, Kingsfield Road, and Pine Forest Road.

#### **Comments on Sales Comparison**

From our research of the market area, three sales have been selected to which to compare the subject. These sold properties bracket the subject for home size and are of similar quality of construction. The subject property has had significant interior renovations within the last two years. The subject has a similar effective age to Sale Two. Being only three to four years old, Sales One and Three are superior for condition when the subject is compared to each, necessitating an adjustment.

Sales One and Two require adjustment for a third bathroom; Sale Three for an additional half bath. Size adjustments have been applied to all sales with the subject being most similar to Sale Two for this characteristic. The subject porch/patio are inferior to Sale One's porch/covered patio and Sale Two's screened porch/patio. The subject's full fencing requires positive adjustment to Sale Three, while its yard building necessitates positive adjustment to Sales One and Two.

Following all adjustments, the sales show a range of market value for the subject property between \$223,700 and \$231,400. With weight to each, it is our opinion that the sales indicate a current market value of \$227,000 for the subject property.

#### **Final Reconciliation**

Of the three approaches to value, the direct sales comparison approach is the most reliable in rendering an opinion of market value for the subject property. With the subject involving a recently renovated home of over 19 years old, development of the cost approach is not considered as reliable a method of determining current market value as the direct sales comparison approach. Development of the cost approach is most applicable with new construction located in areas where recent sales of similar vacant lots are abundant and the market area has a reasonable supply of newly built, speculative homes inventory. Development of the income approach is most reliable in markets where there are an abundance of rental properties; homes within the subject neighborhood are almost entirely owner-occupied. Based on the research and analysis, we estimate the current market value of the subject property as \$227,000.

### Reasonable Exposure Time

My opinion of a reasonable exposure time for the subject property at the market value stated in this report is: 90-180 days.

Exposure time is the estimated length of time that the proeprty interest being appraised would have been offered on the market prior to the hypothetical consummation of a sale at market value on the effective date of the appraisal. This is a retrospective opinion based on an analysis of past events that assumes a competitive and open market. The appraiser has determined that the subject property would have to be exposed for three to six months on the open market of the effective date of this appraisal, at the appraised market value.

#### Additional Certifications

X I have performed **NO** services, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment.

I HAVE performed services, as an appraiser or in another capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment. Those services are described in the comments below.

### Additional Comments

Stephen McKenney, Florida State Registered Real Estate Trainee Appraiser #RI8246, provided significant real property appraisal assistance to the person signing this certification. This assistance included visiting the subject property with the appraiser; researching the market area, subject property, and market trends; analyzing the market and comparable properties; and reporting of descriptions, research, and analysis.
