

Construction Notice of Commencement

Idlewood Drive FEMA Repairs Project

Project Overview

Escambia County's Engineering Division will soon begin the Idlewood Drive FEMA Repairs Project in District 2. This project is a FEMA repair project designed to alleviate chronic flooding and railroad washout at the Green Street terminus. Construction is expected to begin the end of July 2016 and continue through October 2016, weather permitting.

Resident Information

- The project will be reimbursed by the Federal Emergency Management Association at an estimated construction cost of \$190,000.
- The contractor will limit construction activities to the county's existing drainage easements and public rights of way.
- The construction improvements include a new concrete flume at the end of Green Street which will divert a majority of runoff to its intended location, a sediment control structure and conveyance system that drains into Bayou Chico. This replaces an antiquated system that has been compromised and deposited several hundred cubic yards of sediment in the surrounding area.
- Construction is expected to take place during the hours of 7 a.m. to 5 p.m. Monday through Saturday.
- Long-term obstructions in the road right of way are not anticipated.
- Improvement areas may be temporarily disturbed before being returned to their previous state.
- Residents will be provided access to their property at all times, although there may be short periods when a driveway or an entrance may be temporarily blocked as equipment and materials are moved to make repairs.
- Every effort will be made by the contractor to minimize inconveniences to area residents.
- An Escambia County inspector will monitor the construction areas daily.
- We appreciate your cooperation and patience during this construction process.
