# ENVIRONMENT – WATER QUALITY

## NORTH CENTURY DRAINAGE

Acquisition of Wetland real estate to be preserved as mitigation as required by the Corps of Engineers for permitting the North Century Drainage Project that includes a stormwater retention/treatment system to ensure U.S. 29 remains open (unflooded) as a hurricane evacuation route and to improve water quality in the Escambia River System that flows into Escambia Bay, an impaired water body.

A master plan including a drainage system capacity analysis, flood control performance assessment, opportunities for green infrastructure such as stormwater management through low impact development, and assessment of ground and surface water quality impacts.
