

NATIONAL FISH AND WILDLIFE FOUNDATION (NFWF) – PHASE I

PROJECT DESCRIPTION

This project will improve Panhandle beach-nesting bird habitat through nesting habitat enhancements and stewardship activities that will result in increased nesting, hatching, and rearing of chicks. Activities include the placement of signage to protect nesting sites and prevent road mortality of chicks; disturbance monitoring and abatement; mapping, monitoring, and adaptive management to support nesting; and artificial nesting support and experimental habitat creation. These efforts are intended to complement ongoing research, monitoring, and protection actions and will result in more effective and comprehensive success throughout the Florida Panhandle for important beach-nesting species such as Black Skimmer, American Oystercatcher, Least Tern, Piping Plover and Red Knot.
