Ascensia Contour Glucometer

This glucometer is simple to operate with preset factory default parameters as to clock, standard date, and meter features. It calibrates itself every time a test strip is inserted prior to obtaining a blood sample. It has three large buttons and a clear display and is about the size of a large key ring. It has a fast calibration time, utilizes a small blood sample, and delivers the assessment in five seconds from the proper intake of the blood. It should be noted that the blood analysis is of plasma/serum or capillary blood and this can yield values that are 9-15% higher than a laboratory whole blood samples. It is equally as accurate as older devices using the same methodology.

Blood Glucose Testing:

Indications:

Altered sensorium or suspected blood sugar abnormality based on history.

Equipment:

Ascensia Contour Glucometer.

Hypoguard Lancing Device and /or syringe for blood draw.
Setting Up for the Blood Test:

Have all the testing materials you will need ready before you begin testing to include the alcohol or betadine prep, glucometer, lancet, and bandaid and make sure that the temperature range is between 41 degrees and 113 degrees Fahrenheit to make an accurate assessment.

Make sure all of the test strips have not expired or that it has not been 180 days or six months since they were opened for best accuracy. The discard date should be written on the side of the bottle.

Make sure proper PPE is utilized and remove the test strip from the bottle and *tightly close the lid immediately after you have removed the test strip.*
Your Ascensia® CONTOUR®
Meter:

- Display
- Memory Button (On/Off, Memory Recall, Enter)
- Up/Down Scroll Buttons
- Test Strip Port

Your Ascensia® CONTOUR™
Test Strip:

- Gray Electrode End: The end of the test strip that is inserted into the test strip port on the meter with the gray end facing up.
- Sample Tip: The end of the test strip where the blood is pulled in.
1. Hold the test strip with the gray end facing up. Insert the gray end of the test strip into the test strip port.

The meter will turn on and a test strip with a flashing blood drop will let you know the meter is ready to test.

2. Obtain the blood drop. See your User Guide or Ascensia MICROLET insert for instructions.
3. Immediately touch the tip of the test strip to the drop of blood. The blood is pulled into the test strip through the tip.

Hold it in the blood drop until the meter beeps.

Your result is displayed after a five second countdown.

To turn off the device simply remove the test strip from the machine it should automatically turn itself off.
Control Testing of the Glucometer:

This will be done by the stock clerks as they supply the Airway Bags with Glucometer supplies. Everyone should be familiar with the procedure.

Gently rock the control bottle before opening to ensure it is mixed well. Squeeze a small drop of control solution on a clean nonabsorbent surface (such as a piece of wax paper). Do not apply control solution to the test strip directly from the bottle.

Immediately touch the tip of the test strip to the drop of control solution. The solution is pulled into the test strip through the tip.

Hold it in the drop until the meter beeps.

After the beep, you will see the meter countdown five seconds until the test is complete and your control test result is displayed.

The meter will automatically recognize and mark ✓ the control result for you.

NOTE: The ✓ does not indicate the control test result is within the specified range.
